May 14 I.ONDON. Printed by G. D. for Humphrey Moseley, and are to be fold at his Shop, at the Princes Armes in St. Pauls Church-Yard. 1650,

To the Worshipful, my much Honoured Patron, Edward Brssbe, the Younger, Esquie R.

Sir.

what they pretend to; and did not rather Engage, then Gratifie the Receivers; intitling Them to what Errors soever shall be there committed: yet notwithstanding could not This of Mine expect to find any such Entertainment, at Your hands. For, I bring not here a Gist; but, pay a Debt; and, but Restore unto you, what was your Owne before: Since this Dedication is but an Account of some of those houres, which ought wholly to have been Otherwise employed, in your Service.

Neither have you a Single Title to it
A 3 only

only, as Comming from Mc. But, to Great is your Affection to Learning; and so Active, in Incouraging all, that make the least Pretence to It, as that, were la Stranger to you, I should account my self Obliged to make my Addresses to You; and should thinke, all my Endcavors were justly due to Him, that deserves so Well of Learning in Generall. Be pleased therefore, St, to accept of this Meane Present, as a Testimonie, not so much of my Gratitude, as of your own Merit from Learning : & suffer me to make my Hearty, though Weake Attempts of Deserving, in some smal measure, those many Favours, wherewith Youhave not ceased to Oblige

Your most Devoted

Servant,

EDMUND CHILMEAD!

To my Lord Bishop of $\mathcal{N} \land \mathcal{N} T E S$.

SIR,

Refent these Curiosities to your Lordship, as to the most Knowing Man in this Choice Kind of Learning, in the If any conceive the Subject to be of too World. Daring a Nature, and Vnfit to present a Prelite with; whose Profession is onely, To Know his Masters Crosse; let them remema ber, that the most Pious among the Ancient Fathers have not disdained the Curiosities of the Gentiles : besiles that, Preaching, wherein Your Lordspips Excellency is such, as that it renders You Admired by All, as an Oracle; ought to be accompanied with What soever may conduce to the Knowledge of God; out of which number, These Choise Pieces of Antiquity may not be excluded. All rance acknowledgeth Your Lordship to be as a second Saint Paul of Our Age: feeing that, since the time of this Great Apostle,

The Epistle Dedicatory.

the Gospel bath not been preached more Learnedly, nor with greater Eloquence, and Zeale, by Any, then by Your Seife, and Your Desciples. So that the Height of my Descret can be but this; that These my Conceptions, which I here present You with, may be but received by Your Lordship as Well, as Those that issue from Your Lordship Spious Breast are, by all the World.

If I arrive but to This, I shall esteeme my Selse doubly Flappy; having beene already long since so, in baving the liberty to call my selse,

My Lord,

Your most Humble, and Obedient Servant,

I. Gaffarel.

THE

The Author's Additions, and Advertisement to the Reader.

I is not any Itch of writing possesses me, Courteous Reader, that I here present thee with these Curiosities: those that know me, have found me very free from this

But a person of quality, foolish passion. whom to deny any thing, were a great Crime in me, hath forced them out of my Closer, whence otherwise they never should have come: since I had resolv'd, after so many Calumnies indured, never to adventure more into the Publick View, having so oftentimes fighed forth those words of a Roman Prince; Utinam nescissem literas! But in fine, the Intreaties, and Commands of my friends have prevailed against my own Refolution; and I am forced, I confesse, to this Publication; since I could not but foresee well enough, that my Enemies would not rellish at all this other Essay of my pen: notwithstanding after all this, I have wherewith to comfort my self; since one of the greatest Prelates of our Age hath con-

condemned their Insolence. Receive therefore favourably this Discourse, Courteous Reader; and remember what we all are: I will not fay, thou shalt find all things perfect here; for I am no Angel : and if there be any defects, we must accuse our Mortality, which renders all Mankind fubject to Errour. But above all, know, that I am no whit obstinate, or self-conceited, nor never was; I take in very good part what Advertisements soever are given me: neither doe I account my selfe so knowing, but that I shall be very ready to learne of any man: they are fooles only, and vainglorious, that refuse to be taught; and the Ignorant only fay, They know all. As for my part, Courteous Reader, use me but friendly, and I shall require nothing else.

If thou thinke it strange, that a man of the Church, as I am, should adventure on so bold, and daring a Subject, as this seems to be; consider, I pray thee, that many of my Profession have put forth things much more bold then these; and even such as have been esteemed Dangerous too. Thus Trithemius the Abbot put forth his Polygraphy, and his Steganography, where the Calling forth of Spirits is plainely delivered; notwithstanding he makes other use of it, then our Sorcerers doe. Gulielmus Bishop of Pa-

ris hath not only written of Naturall Magick, but he also both perfectly understood, and practified it, as the Learned Picus Mirandula reports of him. Another Learned Bishop also, Albertus Magnus by name, hath taught the grounds of it with admiration. Roger Bacon, and Foannes de Rupescissa, both Franciscan Friers, have done the same. Petrus Cirvellus, a Spaniard of the same Order, hath published to the Christian World a Book in Folio, of the Foure Principall kinds of Divination, and all the Maximes of Judiciary Astrology. P. de Alliaco, a Cardinall, and Bishop of Cambray, hath written of the same Subject: as also hath Functionus, a Priest of Florence, and a Dr. of Divinity. And fince we are fallen upon the Italians, have not Aurelius Augurellus, and Pantheus, both Priests, the one a Venetian, the other a Tarvisian, delivered the Fooleries of the Philosophers Stone, the one in his Chrylopaa, and the other in his Voarchadumia? Marsilius Ficinus also, a Priest, how full of Superstition are his writings yea what Superstition is there in the World, that he hath not published to open View? Antonius Bernardus Mirandulanus, Bishop of Caferte, hath, after his example, maintained a world of things, cleane contrary to our Religion, in his book, De singulari certamine.

The Cardinall Cajetan de Vio hath done the very same : and Giovanni Ingegneri, Bishop of Cabo d' Istria, hath newly busied himself in maintaining the Grounds of Physiognomy. And before all these, Synesius, a Christian Bishop, wrote a book of the Interpretation of Dreames, commented on afterwards by Nicephorus Gregoras, a Bishop also, or Patriarch, of Constantinople. I omit the Superstitions of Foachimus Abbas; and of Savanarola, a Dominican Frier; with Cardinall Bembus his Gli Asolani; Aneas Sylvius (who was afterward Pope Pius II.) his Lucrece; the book so full of all Lewdnesse of Poggius the Florentine, who was Secretary to the Pope. Neither will I mention the Macaronick History, put forthunder the name of Merlin Coccai, but written by Theophilus Folengius, a Benedictine Fiier; nor an infinite number of other books, written by Church-men, with which, Kind Reader, if thou compare this of mine, thou wilt find, if any blame me, they do it wrongfully.

And that thou mayst be fully acquainted with my purpose in this discourse, know, that I give no more credit to any of these Curiosities, then the Catholique and Apostolique Church permits; and that I have not published them, at least some of the most

nice and ticklish, but after many Christians of my Profession; as thou mayst perceive by the Sequel. As touching feroboam's Calves, I am not the first, who hath said, that the making of them was Lawfull, and that this King was no Idolater: the Learned Genebrard hath led me the way; and after him, Moncaus; and before them, Abiudan: and I shall be very ready to withdraw my self out of their company, if I find there be any danger in't. If thou object, that these Curiofities, ought not therefore to be called, Unheard-of; seeing that they have been handled by others: I answer, that the greatest part of them were Vnheard-of, to Christians; fince that I have collected them out of the writings of the Jewes; where they were delivered so obscurely, that even those of their own Nation neglected them. As for the Talismanicall Figures, they were so Vnheard-of in our Age, that their very name was not fo much as knowne. Now that thou mayst have a more perfect understanding of what is delivered in the enfuing Discourse, be pleased to adde this which followeth.

In the First Part, Cap. 1. p. 7. I say, that I had not been able to discover the reason, why Plutarch, Strabo, Trogus, Tacitus, and Diodorus had accused the Jewes of worship-

ping

ping a Vine: I have fince found, that it was, because they had heard say, and even themselves seen, at least some of them, that in the Temple at Ferulalem, there was a Golden Vine, with it's leaves, and clusters of grapes, made against the wall; as it is described by Fosephus. Interior porta, sales he, tota inaurata erat, ut dixi, & circum eam auratus paries, desuper autem babebat aureos pampinos, unde racemi, statura hominis, dependebant. know very well, that many so understand the words of fosephus, as if this Vine were not of Solid, Mariy gold, but only gilded, after the manner of *Phrygian* work. But the other Fosephus, the Sonne of Gorion, contradicts this Interpretation of the words: for, speaking in the same History (of the Destruction of Ferusalem) both more clearly, and more at large, of this Golden Vine, and it's bunches of Grapes, he faies: Fects insuper Herodes vitem de auromundo, & posuit in summitatem columnarum, cujus pondus érat mille talentorum aureorum. Erat autem vitis ipsa facta opere ingenioso, habens ramos perplexos; cujus folia, & germina facta erant ex rutilanti auro; botri autem ex auro fulvo; & grana ejus, acini, atque folliculi facti erant ex lapidibus preciofis : totumg, opus erat far brefactum opere vario, ut effet mirandum spectaculum, & gaudium cordis omnibus intuentique ip ame

ipsam. And prefently after he addes: Multi quoque scriptores Romani testantur, se eam vidisse, cum desolaretur Templum. Now the fore-named Authors, Plutarch, Strabo, and the rest, seeing that the Jewes had in their Temple a Golden Vine, so rich, so precious, and of so admirable workmanship, they were easily perswaded that they worshipped it, in honour of Bacchus, who was the first that subdued the East: and this is the Opinion of Cornelius Tacitus, who lived at the fame time, when this Beautifull Temple was destroyed. Sed quia, saith he, Sacerdotes Fudaorum tibia, tympani|que concinebant, hedera vinciebantur, vitisque aurea in Templo reperta; Liberum Patrem coli, domitorem Orientis, quidam arbitrati [unt; nequaquam congruentibus institutis: Quippe Liber festos, lætosque ritus posuit; Judxorum mos absurdus. fordidulque. But we passe by this Impious Author, who makes a mock at the Religion of the Jewes on all occasions.

In the Second Part, Chap. 4. pag. 86. where I render the Greek words, Yingis comvoidis, by these French words, Menues Pensees, Little thoughts, I have translated the Greek word, Yingis as it ought to be understood, which signifies properly, Little, Delicate, and small: as we call one of the Greek letters I filon, that is to say, the Little T. Now the Se-

eond.

cond Thoughts are Small, Fine, and Delicate, because they consider things abstracted, and separated from Matter; which the First doe not: And therefore we say in French very elegantly, when wee speake of one that hath brought forth any curious conceit, will whe

pensée bien deslike.

In the following Chap, you may adde these admirable Gamahes. At Pisa, in the Church of St. Fohn, you have, on a certaine stone, an Old Hermite, perfectly drawn by Nature only, but with so much exactnesse, that there feemes not to be wanting any thing that belongs to one of that fort of men. For he is represented in a Desert, suitable to his profession, and fitting neare a Brooks fide, with a Clock in his hand. This Naturall piece of Picture, almost fully answers That, they deliver St. Anthony in. In the Temple of S. Sophia, at Constantinople, there is also seen, upon a plain white Marble, the Image of S. Fohn Baptist, cloathed with a Camels skinne; being only defective in this, that Nature hath drawn him but with one foote. At Ravenna, in the Church of St. Vitalis, there is to be seen a Franciscan Frier, naturally drawn, upon a stone of an Ash-colour. At Sneiberg in Germany, there was found in the Earth, a certaine little Statue of a kind of unrefined Metall, naturally made, which represented, in a round

round Figure, a man having a little Child at his back: and whoever hath any where scene the picture of St. Christopher, may easily conceive the shape of this. It is not long since there was found, in the Hercinian Forest, a Stone that naturally represented the figure of an old man, with a long beard, and crowned with a Triple Crowne, as the Pope of Rôme is. Observe likewise that many of these Stones. or Gamahes, are called all by the same name, because they have alwayes the same figure. So that, which represents the Eyes of a man , is called Leucophthalmos: that which beares the figure of a Heart, Encardia: that which hath the shape of a Tongue represented on it. Glossopetra: that which is figured like the Genitals! Enorchis: and if it represent as well the secret parts of a man, as of a woman, it is then called Diphys, &c.

To the figures that are found in Plants, and Flowers, you may likewise adde those which represent some kind of Letters, or words: as the Hyacinth, on which the Poët sayes, is written the Complaint of the fair Phabus, for having killed Hyacinthus; whom he afterward transformed into a Flowre of the same name: and this Complaint of his is express in these two Letters, a, which make up the word, Ai, which we frequently use in all kinds of sorrow,

Non satis hoc Phæbo est, (hic enim fuit auétor honoris:) Ipse suos gemitus folijs inscribit. & Hya Flos habet inscriptum, funestaque litera duéta est.

The Flower also that sprung, (according to the siction of the same Poet,) from the blood of the valiant Ajax, beares the two sirst letters of his name, Ai.

Metamorph. lib. 13. Litera communis medijs pueroģ., viroģ., Inscripta est folijs, hac nominis, illa querela.

As for the diverse kinds of Figures that wee meet withall in beafts, (which we have likewife examined in the same Chapter,) I have found nothing more worthy our admiration, then what I have been lately informed of by Eye-witnesses: namely, that it is not long fince, that in diverse parts of Poitou it rained a certaine kind of little creatures, about an Inch in bignesse; some whereof were in the shape of Bishops, with a Rochet and hood, closed up in a shell, or skin, so admirably, that one would have thought it to have been of burnished gold: others were in shape like Friers, with a Frocke and Cowle: some were of a certaine horrid shape; and others like I know not what. It is a great wonder, if this Relation come among the Dutchmen, if wee have

not very speedily some strange Interpretation of the Revelation, such a one as Ananias Feraucurius, and Raphael Eglinus have given, (as we shall shew hereafter) of the dark Visions of Daniel, by the help of certaine Characters found upon two Herrings, taken up upthe coast of Norway. But to passe by these Fooleries.

In the Sixth Chapter, where I speake of diverie forts of Talismans, and prove their yertue, according to the opinion of the Easterne parts, you must take heed, that you mixe not all forts of Characters, and figures, indiffetently, with these Talismans. For though many of them beare the Figures of the living creatures described in the Heavens, which we usually call Constellations, they are not therefore presently to passe for true Talismans; but either some kind of Mony; as that of the Duke of Brunswicke, whereon were ingraven all the Celestial Signes; and that of Augustus Cæsar; on which he caused the Sign of Capricorn to be figured; for no other reason, but only in memory that he was born under that Signe. Or else these Figures are only some Mystical Em- . blemes, under which the Ancients couched iome certaine Philosophical Secret. Such was Nestor's Silver Goblet, in Homer, whereon the Pleiades were ingraven: as you may see here in the Translation of Natalis Comes,

which

which is more Poëticall then that of Gipha-nius.

Poculum erat pulchrum, domo & id portaverat ipse,

Transsixum clavis aureis, ac illius aures
Quatuor: hinc gemina complexa Livia, at
illas

Ex auro circumpascuntur, funda duo sunt.

Nec facile hoc quisquam poterat extollere
mensa,
Quùm plenum foret: at Nestor nullo ipse lahore

Whoever therefore knows not the Mysticall meaning of this Goblet, would, without doubt, seeing the Pleiades engraven on it, be apt to conseive, that it was made under some certaine Constellation, as Talismans are where as there is nothing else in it, but a Philosophical Sense, thus darkly delivered by Homer; as we may see in Alciat, who explaines the meaning of it thus.

Tollebat senior. -

Nestoreum geminis cratera hunc accipe fundis, Quod gravis argenti massa profundit opus. Claviculi ex auro; stant circum quatuor ansa, Unamquamq; super fulva columba sedet. Solus eum potuit long avus tollere Nestor. Maonida Maonida doceas quid sibi musa velit?
Est cælum Scyphus ipse,colorq; argenteus illi:
Aurea sunt cæli sidera claviculi.
Pleiadas esse putant, quas dixerit ille columb.s:

Umbilici gemini, magna, minorq, fera est. Hac Nestor longo sapiens intelligit usu. Bella gerunt fortes, callidus astra tenet.

The Poët Anacreon, who consulted with Bacchus, as often as with his Muse, makes himselfemerry with this Goblet of Nestor; and intreats Vulcan to make him one, without such a deale of Philosophy wenough to make one cracke his braines: For, what have I to doe, quoth he, with the Pleiades, or bright-shining Bubles ? Make me therefore, good Vulcan, neither Armes, nor weapons: but make me a Bowle, as deepe a one as thou canst; and ingrave thereon no Stars, neither Charles his Waine, nor the fad Orion; but carve me out a Vine, with it's swelling grapes, and Cupid, Bacchus, and Bathillus, pressing them together, His verses are thus translated by H. Stephanus, very elegantly.

> Torno mihi labora Argentum; & inde finge, Vulcane, non quidem arma, Nam quid Gradivus ad me?

See

Sed poculum mihi fac
Quantum potes profundum.
Insculpitoq; în illo
Non astra, plaustrave ulla,
Tristem nec Orionem.
(Nam Pleiades quid ad me?
Quid lucidus Bootes?)
Vitem sed; et racemos
Insculpe, cumq, Baccho
Uvas simul prementes
Cupidinem, & Bathillum.

These verses have often made me doubt, whether or no, many of those pretious stones that we see in Ancient Rings, which are commonly taken for Talismans, (such as was that of our Countryman Bagarris, whereof I make inention:) on which we find Capids, Bacchus, Vines, blunches of grapes, and vine-branches ingraven, were not rather the effects of some gallant Humor of some Philosophers, who desired to weare on their singers the Emblemes of Wine, rather then any other sigures.

In the same Sixth Chapter, where I speake of the power of Resemblance, I know not how, in the 172. page, the word, France, hath slipt in, instead of Italy. For it is in Italy chiefly, where the Leprosie is so frequent, by reason of the great quantity of Hogs slesh that is easen there, more then in any other

Kingdome:

Kingdome: and the reason that in France, we see some infected with this disease, is, because that here, next to the Italians, they eate more hogs stesh, then any where else. Neither do I say this, but according to the opinion of Physicians, without the least purpose of offending any, either Strangers, or those of my owne Nation. In a word, Courteous Reader, I shall desire thee to interpret in good part, whatsoever thou shalt find in this Book; seeing that my purpose is to deale clearely, as one exempt from passion.

In the 77. page of the same Chapter, my intent is not to ranke foseph's gift of Interpreting Dreames with the Art of Conjecturing at the meaning of Dreames: Nor yet to reject the order of the Commandements, established by the Church, and to introduce that which is set downe, page 291, for I there follow the fewes manner of counting them.

Lastly, I must intreat thee to correct the faults of the Presse; and use mee, as thou wouldst be used thy self.

A

ቚቚቚቚቚጜጜጜጜጜቝቝቝዀዀዀዀቔጜ

A TABLE of the Chapters, and their CONTENTS.

PART. I.

Wherein the Jewes, and other Eastern Men are defended.

CHAP. I.

That many things are fallely imposed upon the Jews, and the rest of the Eastern men, which never were.

THE CONTENTS.

He Arguments brought against the Eastern men, whereon grounded.

2. The Iewie falfely avensed, by Appion, Plutarch, Strabo, Trogus, Tacitus, and Diodorus Siculus, of worshipping Asses, Vines, and the Clouds.

3. Whence thefe Fooleries prung.

4. The Syrians fallely faid to worship Fishes. Xenophon, Cicero, Elian, Ovid, Martial, Artemido-, rus, and Scoliger, refuted.

5. The Idoll D gon, not figured like a Woman, or Siren; as Scaliger would have it: but in the forme of

a Triton. The Fable laid open.

6. The Samaritais no Idolaters; no more then Aaron, and Jeroboam, for having made Catves of gold;

according to Abindan.

7. The Cherubins of the Arke not made in the forme of Young Men; against the opinion of all, both Greeke, and Latine Authors, and the greatest part of the fewish too.

9. The

8. Arguments in defence of the Samaritans.

9. The reasons brought by the lewes, and Cajetan, touching the figure of the Cherubins, of no force.

10. The fewes falsely ascused of burning their Children to the Idoli Moloc: Whence the custome of leaping over the Fire of St. John hath been derived.

CHAP. II.

That many things are esteemed ridiculous, and dangerous, in the Bookes of the Jewes, which yet are, without any blame, maintained by Christian Writers.

THE CONTENTS.

T Hat we ought not to rest on the bare Letter of the Scriptures.

2. Authors that have treated of Ridiculous Sub-

jests, without being reproved.

- 3. The books of the fews leffe dangerous, then those of the Heathens, which yet are allowed by the Christian Fathers.
- 4. The Feast that God is to make for the Elect, with the flesh of a Whale, how to be understood.

5. Ten things created on the Even before the Sab-

both, and what they were.

- 6. The Opinions of the Ancient, and Modern mriters, touching the end of the world: what Fathers of the Church have been of the Jews opinion in this Particular.
- 7. Diverse opinions concerning the number of years from the Creation to our Saviour Christ: and what wee ought to conclude, as touching the end of the
- 8. The Ancient Rabbins are falsely accused, of speaking ill of our Saviour Iesus Christ.

9. Tbo

9. The Third Objection in the precedent Chapter answered: and an Enumeration of some Errours of great Importance in Our owne Bookes.

PART. II.

Of the Talismanical Sculpture of the Persians, or the manner of making Figures, and Images, under certain Constellations.

CHAP. III.

THAT the Persians are unjustly blamed, concerning the Curiosities of their Magicke, Sculpture, and Astrology.

THE CONTENTS.

THE evil custome of blaming the Ancients is

2. The Reasons brought against the Persians, and their Magicke, examined, and found of no force. The Broors of the Counterfet Betosus, Dinon, Comestor, Genebrard, Pierius, and Venetus, concerning Zoro after.

3. The frange Statues of Laban, and Micha, called

Teraphim, perhaps allowed of Gods.

5. The Errours of Elias Levita, Aben-Elia, R. Eliczer, R. D. Chimehi, Cajetan, Sainces, Vatablus, Clarius, Mercerus, Marinus, and Mr. Selden, concerning these Teraphim. The groffe conceil of Philo Industouching this Particular.

6: A Conjecture concling these Statues, what they were; and an answer to what may be objected a fainst it.

7. Of certaine Strange. Prodigious things, which have foretold Disasters, which have been seen to come to passe; and which do yet foresell the same.

-8. The Conclusion of all before delivered.

CHAP. IV.

That for want of understanding Aristotle aright, men have condenshed the power of Figures; and concluded very many things, both against this Philo-fopher, and against all found Philosophy.

THE CONTENTS.

1. E Rrors in Learning, caused by the Ignorance of the Languages.

2. Eid fignifies Specimen, and not Species.

3. The reading of dutos as sport proved to be full.

4. Toesnusy ill translated; and hence the Queffion of Universals, not understood.

5. The proper translating of xwpisd.

6. The Errors committed in these words, λόγ. Gregias, and τὸ τί ἡν εί ναι, and ωράθειν, ποιείν. The correling of εντελέχεια rejected, against Cicero.

7. It is falfely concluded out of Aristotle, that Fire

is moist; against du Villon.

8. That Aristotle is abused by Interpreters, by reafen of their not understanding the force of the word suit; and by reading Coor, instead of Cov.

9. The falle Interpretation of the word xpinon, gi-

ven by Stapulensis.

10. The word motorns, rightly understood, condemneth those that deny the power of Figures. The proofe of this at large.

CHAP.

CHAP.V.

The power of Artificiall Images is proved, by that of those that are found Naturally imprinted on Stones, and Plants, commonly called Gamabe, or Camaieu, and Signatures.

THE CONTENTS.

I. THe Division of Naturall Figures, or Images.

Gamahe, or Camaieu, drawn peradventure
from the Hebrew word 7002 Chemaia.

2. Of divers rare Gamahes, or Stones painted naturally: and why they are more frequently found in hot

Countreys, then in Cold.

3. Of other curious Gamahes not painted, mentioned by Pliny, Nider, Gesner, Goropius Becanus, Thevet, and Mr. de Breves. A new Observation on the Banes of Giants.

4. Of Gamalus that are Ingraven: and mb-ther those places, where ever any Fish shels are found, have

been formerly covered with water, or not.

that are found in all the parts of Plants. Many choyce Inquiries proposed, on this Subject.

6. The power of these Figures proved; and the Ob-

jections answered, that are brought against it.

7. The Secret discovered, why a Scorpion, applied to the wound made by a Scorpions sting, should not burt rather, then cure it.

8. Of the Figures of Plants, that represent all the parts of the body of a man; and that cure the same,

when ill-affected.

9 The Formes of all things admirably preferved in their Ashes. 10. The Ghosts of dead folks, that appear in Churchyards, and after great slaughter of Armies, whence they proceed. Certain choice Questions proposed, touching this Argument.

il. A new reason given, of the Raining of Frogs,

which hath sometimes bappened.

12. Of Figures that are found in Living Creatures; and what power they have.

CHAP. VI.

That, according to the opinion of the Eastern Men, Figures, and Images may be so prepared, under certaine Constellations, as that they shal have the power, Naturally, and without the aide of any Demon, or Divel; to drive away no some beasts, allay Winds, Thunder, and I empess, and to cure diverse kinds of Diseases.

THE CONTENTS.

I. THe insupportable vanity of some Pretenders to Learning, is noted.

2. How these Talismanicall Figures are called in Hebrew, Chaldie, Greek, and Arabick. The Etymology of Talisman uncertain, against Salmasius.

3. By what meanes the power of Figures u proved: and who they are, among the Arabians, that have de-

fended is.

4. Of certaine admirable Talismans, found at Paris, & Constantinople: and what happened to these places, after the breaking of them.

5. What the Dij Averrunci of the Ancients were.
warding, whence derived: and whence the custome of
setting up Figures, and Images in Ships came.

6. The fable of the stone Bractan, in Turky, discovered: vered: and a Conjecture given, concerning the Palladium, and the Statues mentioned by Philo Iudæus.

7. The Golden Calfe, and the Brazen Serpent, falsely said to be Talismans: and why the Serpent was made of Brasse, rather then of any other Metall.

8. The Wonderfull Effects of 3. Talismans, spoken of by Scaliger, M. de Breves, and the Turkish Annals: and of what vertue those other were, that were made by Paracelsus, M. Lagneau, and diverse Learned Italians.

9. The Power of these Figures proved, by the power that Resemblance is known to have, in all Arts, and Sciences: and sirst in Divinity. Why the Ancients placed Images in their Temples.

10. In Philosophy. Of the Power of Imagination.

II. In Physicke. Of some Animals, Plants, and Graines, that doe good, and hurt, meerly by Resemblance.

12. In Aftrology. A Certaine Meanes of foretelling Ewils to come, by the Colour of the Meteors that appeare.

13. In Physiognomy. The manner how to know the Natural Inclination of any man, according to Campanella.

14. In the Art of Divination of Dreames. Examples, both Sacred, and Prophane, touching this Subject. 15. In Painting. Why our Saviour Chill is of the pillured Suffering upon the Grossethen Sitting of the Right hand of his Father.

16. In Musick. Of some Diseases that are cured

by it. 17. The manner of making these Talismans.

18. The Talismanical Operations set downe by Thebit Ben-chorat, Trithemius, Gochlenius, Albanus Villanovensis, & Marcellus Empiricus, cendemned.

19. What power the Heavens have, over things here below.

20. The reason of the names of the Celestiall I-

21. What Influence the Heavens bave upon Artic ficiall things.

CHAP. VII.

That the Objections which are made against Talifmanical Figures, make not any thing at all against their Power.

THE CONTENTS.

Twhence the custom of using certain words, and of applying certain Characters, in the cure of Diseases, hath sprung.

2. An abominable Ceremony used by the Egyptians, for to cause Haile to cease. The reason of the Command, given to the sewes, of not Graffing on a tree of a different kind.

3. The Talisman's delivered by Antonius Mizaldus,

Condemned

15.11

4. The Objections brought by Gulielmus Parisiensis, and Gerson, answered. The power the Sunne hath within the bowels of the Earth. 5. A 3. A Fourth Objection answered. The Stories of Sorcerers, and of the Images of Waxe, of very little credit.

6. A Fifth Objection refuted. Of the Weapon Salve, that cures the wound, by being applied to the weapon that made it.

7. The Sixth Objection of no force. A remarkable

Story of two Twins.

8. The Operation of these Talismans proceeds not from the secret vertue of the Stone.

9. Cajetan, and Pomponatius, defended, against Delrio, tenthing the power of Figures.

10. The vertue of the Stars descends as well upon a Living Scorpson, as upon its Image.

11. The forcible reasons brought by Galcottus, in defence of Talismans.

12. The Objection, brought against Franciscus Rueus, answered.

13. The Story of Virgils Talismanical Fly, and Horseleech a true one; against Naudaus. Gervais his booke not fabulous; as is commonly believed.

14. Of some Admirable, and curious Inventions of men, that seem more Incredible, then Talismans.

15. Certaine Objections, never before brought, & gainst the power of Figures; with their Soldsion.

PART

PART. III.

Of the Horoscope of the Patriarchs: or the A-strology of the Ancient Hebrews.

CHAT. VIII.

That Idolatry is fally faid to have sprung from the Astrology of the Ancients.

THE CONTENTS.

1. THE Arguments against Astrology, ill grounded. And how, by the wayes of Nature, it is possible to give judgment of the Good, or Evill Fortune, of a Child.

2. The Resolution of Thomas Aquinas, in the behalfe of Aftrology.

3. Gulielmus Parisiensis, and Paracelsus refuted. Astrology by whom found out: the Erronr of Pliny in this Particular.

4. Astrology both Good, and Evill; and bow. Moses a Skilfull Astrologer.

5. Idolatry whence spring forth, according to Marsilius Ficinus, and Bechay, a sew. Hanni-Bal, and Hasdru-Bal, compounded Names; and why.

. 6. The Opinions of R. Moles, and the Author of the book of The Wiledome of Salomon, concerning the beginning of Idolatry. The Conclusion of all before delivered.

7. Fires used to be made, by the Ancients, to the Sun, and the Moon: and for what reason.

8. Reasons given for the proofe of the Innocency of the Ancients, in these Cariosities

٠.

CHAP.

€ A A P. IX.

Whether, or no, the Ancient Hebrewes made use of any Mathematicall Instrument in their Astrology': and what the figure of their Instuments was.

THE CONTENTS.

Hat Instruments the Ancient Astrologers used. The Fable of Atlas discovered.

2. The Hebrewes Sphere described.

Certain Doubts proposed, concerning the Fabrick of it. The strange concest of R. Moles, concerning the number of the Heavens.

A Conjecture upon the Antiquity of thu

Sphere.

5. Of the Diall of Ahaz, and its description, not get seen.

6. Conjectures on the figure of our Sun-dials.

CHAP. X.

That the Aftrology of the Ancient Hebrewes, A. gyptians, and Arabians, was not fuch, as it is delivered by Scaliger, Augustinus Riccius, Kunraih, Duret, and Vigenere.

THE CONTENTS.

1. THE Holiest things are often mixt with Fables.

The strange Fancies, and Falshoods of Duret, touching the Spirits of the Planets; and touching the Aftrologicall Cabale of the Iowes.

The Fooleries of Carlo Fabri, in his affigning of the Angels, proper to the Seven Electors

of the Empire.

4. The Strange Doctrine of Riccius, and Kunrath, concerning the Planetary Zephirots.

5. The Stars, the cause of the diversities in Re-

ligion, in the opinion of R. Chomer.

6. The Nativity of our Saviour Jelus Christ,

erested by Bechai, and Cardan.

7. The Astrologicall Pictures, or Figures, at the Conjunctions of the Celestiall Signes, falsly attributed to the Egyptians, and Arabians, what they were; and by whom invented: against Scaliger.

CHAP. XI.

What, in truth, was the course the Patriarchs, and Ancient Hebrewes took, in their Observations, at the crecting of a Nativity.

THE CONTENTS.

THE Celestiall Constellations were anciently I marked with Hebrew Characters.

2. How the Celestiall Signes are figured in the Spheres, and Globes of the Atabians. That of Virg go hath a Mystery in it.

3. A new Observation on the Hebrew names of the Planets.

4. A Table, by which the Iewes' erected their Nativities. The use of it.

5. Demonstrative reasons, why the Dayes follow not the order of the Planets. A Genethliacall

Table of the Ancient Hebrews.

6. The difference betwixt the Ancient's manner of giving judgment upon a Nativity, and that of the Astrologers of our times. The Fable of Lucina laid open.

7. The Moon, why called Lunus, and Luna; and

the Heavens, Coelus, and Coelum.

8. A new, and certaine reason, why the Poets report, that Saturne eat up his Children.

9. What Qualities the Ancients acknowledged

to be in the Celestiall Signes.

10. The Authors Indoment, upon the Astrologicall Writings of R. Abraham Aben-Are, translated into Latin by the Conciliator.

11. What Planets were accounted Benigne, by the Ancient Hebrewes. What Ceremony the new-

maried man used, toward his Bride.

out of the Holy Scripture. Reasons which prove, that 'I Gad. (which was the name of one of the Sons of Jacob.) is the Planet Tupiter.

13. The Egyptians the first that corrupted this Astrology. It is false notwithstanding, that they were the Inventers of the Charasters of the Planets. Fables introduced into Astrology, by the Greeks.

14. Athlon, a word in Nativities, used by Manilus, rightly interpreted; contrary to Scaliger.

PART. IIII.

of the Reading of the Stars, and what ever elfe is seen in the Aire.

CHAP. XII.

Whether it be possible to read any thing, in the Clouds, and in all other Meteors.

THE CONTENTS.

1. HOw many waies this Reading by the Meteors may be performed.

2. Battailes, and fearfull Prodigies seen in the

Aire.

3. The Reasons they give, who are of opinion, that these things are Supernaturall.

4. Reasons given to the Contrary. Angels, and Saints, how they have sometimes been seen to

appeare in the Clouds.

5. A new, and quaint opinion, touching the divers kinds of figures that appeare in the Clouds: and a conjecture upon the Secret, mentioned by Trithemius, of conveying Newes a great distance off.

6. The Author's Resolution, concerning Strange

Sights in the Aire.

7. The Raining of Blood, in the Figure of a

Crosse, not Naturall; against Cardan.

8. The Manna in the Wildernesse, marked with the Hebrew letter Vau, according to some of the b 2 Rabbins:

PART

Rabbins: and what confequence we may bence ded

9. Haile in Languedoc, figured like Armes: Snaw, like Stars in Bape, spoken of by Kepler.

10. The Rainbow, the Hieroglyphick of Sorrow.

11. Diverse Opinions, concerning the generation of Comets: and whether, they naturally presage some Evill to come, or not.

12. Rules to know, what Pillars, Swords, Bucklers, Trumpets, and fiery Arrowes, seen in the Air, foretell. Hebrew Letters sometimes seen in the Air.

14. What Letters have been devised, in Imitation of the Figures made by Cranes in their Flight.

Presages of Accidents to come, taken from Birds.

CHAP. XIII.

That the Stars, according to the Opinion of the Hebrew Writers, are ranged in the Heavens, in the forme of Letters: and that it is possible to read there, whatsoever of Importance is to happen, throughout the Universe.

THE CONTENTS.

I. THE Celestial Configurations, devised by the Greeks, permitted by the Church, though dangerous. This New dostrine, of the Reading of the Stars, no whit repugnant to the Christian Faith.

2. This Reading, proved out of the Scripture. Diverse passages of Scripture, tending to this purpose, interpreted.

3. The

3. The Opinions of the Ancient Hebrewes; Greeks, and Latines, in this Particular.

4. The reason, why so few Authors of these later times have medled herein. What our Moderne Writers, as Reuchlin, Picus Mirandula, Agrippa, Kunrath, Banclli, and R. Flud, have delivered, of this Subject.

5. Postell's Intention of bringing it into Europe.

6. The Stars ranged, not in the forme of Arabick, nor Samaritan, but of Hebrew Charatters. The Superstition of the Arabians, in the reading of some kinds of words. Their letters borrowed from the Hebrewes.

7. The Hieroglyphicall Living creatures of the Egyptians, placed in the Heavens, are not to serve

for Letters. The Constellations Impersect.

8. What things are to be observed, that one may be able to read the Heavens. What the reason is, that New Stars often appeare, according to the Rabbins.

9. A continued Enumeration of the severall Meanes that must be used, for the rendering a man capable of this Reading. The Star in the Taile of Ursa Major, the Fore-shewer of the Change of Empires; and how.

10. On which side we are to begin this Reading in the Heavens: and how we must interpret

the words we find there.

11. Of those Celestiall Letters, that have foreshowne all the great Mutations in States. The Fall of two Powerfull Kingdomes of the East, read in the Heavens, by R. Chomet.

12. The Author's Indgment, concerning this

Reading of the Heavens.

CVRIOSITIES.

PARTI.

The fewes, and other Eastern men are defended.

CHÁP. I.

That many things are falfly imposed upon the Jewes, and the rest of the Eastern men, which never were.

THE CONTENTS.

arguments brought against, the Eastern men, whereon grounded.

2 The Fewes fallely accused, Trogus, Tacitus, and Dio-dorus Siculus, of morshiping Asses, Vines and the Clouds.

Whence

3. Whence these Foolcries sprung.

4. The Syrians falfly said to worship Fishes, Xenophon, Cicero, Ælian, Ovid, Martiall, Artemidorus, and Scaliger refuted.

5. The Idol Dagon not figured like a weman, or Siren, as Scaliger would have it : but in the form of a Triton. The Fable layd open,

6. The Samaritans no Idolaters; no monthen Aaron, and Jeroboam, for having made Calves of gold; according to Abiudan.

7. The Cherubins of the Arke not made in the form of Young men: against the opinion of all, both Greeke and Latin Authors, and the greatest part of the fewish too.

8. Arguments in defence of the Samari-

tans.

9. The reasons brought by the Jewes, and Cajetan, touching the sigure of the Cherubins, of no force.

10. The Jewes fally accused of burning their Children to the Idol Moloc. Whence the custome of leaping over the sire of Saint John, hath been derived.

Hey that publish to the world any new, and Unheard-of Doctrine that they may give it the greater Authority, and make it passe with the more credit, shew first of all the Integrity of the Man, that was the first Inventor of it: that so, the good opinion

opinion that is conceived of the Author, may take away all suspition, or jealous efficient the things that shall be delivered. The choyce points of learning which we shall here lay down, are so new, that I have adventured to call them Vnheard-of. It concerns me therefore, for the better securing them from suspition, to take upon me the desence of the Eastern men, and chiefly of the Fewes, who are the Authors of them, and in point of Curious searning, to defend their innocency, hitherto so much injured.

1. This nation is commonly abhorred Thez for foure reasons. The first is, their Idola- last Objections try; which all Authors make them guilty are anof. The second is, their foolish vanityes, swered that their books are full of. The third is, by in the followreason of their blasphemies, they to this day ing chap, vomit up against our Saviour Fesus Christ. And the last is, for the errors that they maintaine contrary to the Law. The First of these conceits is grounded on a false perswasion: for, after that it was once believed that the Jewes worshiped the head of an Asse, Hogs, and the Clouds; it was presently concluded, that confequently their writings could not be free from these impieties. The second proceeds from the little knowledge men genefally have of the bookes of the Jewes. The third, from the harred men beare to the Tewish

Jewish Authors. And the fourth, from the Solfesconceitedness of those that accuse them. 20 20 Eor the first of these Objections, Ap. pion, as fofephus affirmes, was the first, that forged it out of his owne braine: and notwith standing that this excellent Author of the Jewish Antiquities hath learnedly confuted him; Yet Plutarch takes it still up for a symp.4. Truth, and Tatitus also, after him, brings it in, in his History, as a Prodigious thing: in so much that the Fable at length passing for a Truth, it hath gone for currant, even with the most serious Historians. Now this worship of the Jewes (say their Writers) was after this manner. There was an Altar e rected a under which having performed some certaine ceremonies, a Golden Statut of an Asse was set up upon it, (some make mention of the head onely) then, the chiefe Priest having censed it, all the People, putting their hand to their mouth, bowed down and worshiped it. The very same Adoration, in a manner, they used (as these Authors report) to the Statue of a Hog.

Judans licet & Porcinum numen adorat.

Sayes Petronius: as also to a Golden Vine: but with this difference, (sayes Plutarke, with Strabo, Trogus Pompeius, and Diodorus Siculus:) that the Priests, when

they Sacrifiled to Bacchus, were crowned with Jvy, and going with Flutes, and Drummes, founding before them, they bowed down before this Golden Tree, which was religiously preserved within their Temple. Concerning their worshiping the Clouds, the opinions are divers: some affirming, that the Jewes had some Figures of them made in their places of Devotion: others fay, not. But these are meere Fancies. So that, to make it appeare more clear then the Noon-day, that this Nation is no whit guilty of these Crimes; even Tacitus himselfe, who had before accused them of Jdolatry, forgetting what he had faid before, addes presently after, Nulla simulachra vrbibus suis, nedum templis esse: That they have no Images in their Cities, much lefte in their Temples: So farre are they from worshipingthe Statues of a Hog, or Vine, or the figures of the Clouds.

And yet see, what Fuvenall reports of

them.

Nil prater Nubes, & Cæli numen adorant. l. 16.

Strabo writes the very same: and in the Reigne of Theodosius, and of fustinian, they were generally called, Calicola, and for this Cod. lib. very reason: as you may see in the constitue 8.46.18. tions of this Emperour.

D 3

But

But let us once teach the Ancients, fince The first Objecti- they have so often taught us; and pretend, for footh, to have delivered nothing over to Iwered. us but pure Truthes. If it be true, that the Jewes should have given themselves over to the vanities of worshiping these Idols here spoken of: how comes it to passe, that their true God should never, in all the Scriptures which he hath given them, lay this Crime to their charge as well as any other? And here we cannot say of This, as we use to fay of our owne bookes: That a thing may have been, and yet not have been spoken of. For, in this Law, which all acknowledge to be most severe, the case is otherwise: For, in point of Crimes, not so much as the least is omitted. Neither can any fay, that Idolatry hath sprung up since the writing of the Old Testament: For, besides that, the enemies of the Jewes would have then cast it in their teeth, as most abomineble; The above named Authors affirme; that the Law forbidding them the eating of Hogs flesh, had not been given them, but meerely because they had worshiped this Beast. But why then doe they not, by the same reason conclude, that this People had worshiped Conies, Hares, Camels, Offridges, and Ravens: Since the eating of thele was also forbidden them:

3. We say then, that these are meere calumnies; or rather Fantastick Opinions, grounded upon the Jewes so religious abstaining from the flesh of this Beast; in obedience to the Precept which was given them, for their better preservation from the Leprosie; a disease they were otherwise very subject unto: and here you see the Originall of the Fable. As for the Golden Vine, and the Honours they are said to have paid to Bacchus, I cannot discover, I confesse, in any Author, the rife of this errour: and I conceive, the first that spake of this, might. happily mistake the name of the Jewes, forsome other People; as we see it usually happen in Authors, in the like case. Or else, some Apostate Jewes having been scen prachiling these acts of Idolatry, it was consequently concluded, that the whole Nation was guilty of the fame.

But an account may more easily be given of the cause of the errour, in the businesse of their worshiping the Clouds; which might spring from that miraculous Cloud, which was light on one side, and darke on the other, and was guide to the Children of Israell in the Wildernesse. Or perhaps this other reason which I shall now give, why the Jewes were called Cælicolæ, Worshipers of the Heavens, or the Clouds, may be more

B 4

.

latis

fatisfying: Namely, because they worshiped God, who is often called in the Hebrew tongue, \(\sigma' \text{Schamaim}\), a word, that signifies also the The

nifies also, the Heavens.

As for their being faid to worship the head of an Asse, those that impute the beginning of this error to the great service the Hebrewes had done them by Asses, at their comming up out of Egypt, seeme not at all to speake with any probability. And yet Tacitus feemes to me much more ridiculous, when he saies, that the Jewes worshiped Asses, be-Hist. 1.5. cause, they found them out water in the Wildernesse. Sed nihil aque (saith he) quam inopia aque fatigabat, cum grex Asinorum agresti. um, e pastu, in rupem nemore opacam concessit. Secutus Moses, conjectura herbidi soli, largas aquarum venas aperit. And then presently he adds, that in recompence of this benefit, Effigiem animalis, quo monstrante, errorem, suimque depulerant, penetrali sacravêre. A pleasant Fable this; which yet is confuted, by what the same Author himselse elsewhere writes; as we have before shewed. I should therefore rather fay, that the affection which every man beares to his owne Religion, is so eager, and violent; that in all ages, upon all occasions, those of a contrary Beliefe have been very apt to fall fowie upon each other. The Jewes therefore, either for ha-

ving been bound up by so many Commandements; or else, for having been so obedient to their God, might have been called Asses: as Charles the fifth was wont to call the French, for being so tamely obedient to their Kings. And even the Primitive Christians were not free from this very injury; for their common Epithete was, Asinarij, as Tertullian reports; till the time of that Emperour, whose excessive hate against our Saviour Felus Christ carried him on to that heigth of unparrallel'd Malice, as that he caufed a statue to be erected, bearing the shape of an Asse, houlding up a booke with one of his hoofes, with this inscription on it: Deus Christianorum Ononychitis.

4. Now the Jewes were the more readily believed guilty of all kindes of Idolatry, because that, besides that they had been observed to have runne blindly after some sorts of it, they dwelt also neare a People, that were very great Idolaters. But neither is there any more truth in the imputation layd upon their neighbours, then in that wherewith the Jewes themselves are aspersed: So true it is, that after a Nation is once cried downe, their very best actions are suspected. The Syrians were indeed justly accused for being omewhat guilty in this particular, but that hey ever worshiped the Fishes of the Sea,

neithe

Heil & neither Xenophon, Plutarch, Cicero, Diodora racdos- Siculus, Aelian, Ovid, Martiall, Artemido L3 c.8. rus, nor among the Moderns, the learned De.Na. Scaliger. (who to this purpole cites some Dec. Ani. veries of the Poet Menander,) can, without 12.6. 11. Bur they abstained, say they, from the eating Fastur. of them: and if any were so daring, as to ea of them, they were immediately punished Lib.4. Epig-43: with a swelling in their bodies: Whene T.c.12. the Poet Persius tooke occasion to call Fishes Insphar. Dij inflantes corpora. But, that we may dis fol. 343. abuse those, that have been missead into this perswasion, and discover the true ground of this error; we confesse that the Syrians did indeed abstaine from the vse of some certains kinds of Fishes, which by reason of their venomous nature, did really cause swellings in those that car of them. And we may daily ob-See Ron, lerve, out of the Naturalists, that as the flesh deler, in of some Land-Creatures is dangerous, in like flory of manner also it is, in those of the Sea. Now Filhes, the Fishes which the Syrians did abstaine from were the Apua, and the Manis; two very Lib. Tiepi venemous kindes of Fishes, as you may fee in namoyi- Plutarch, and fohannes Tzetzes. We may therefore conclude it meerely fabulous, which Chiliad. is reported of the Syrians; namely, that they abstaine nor onely from all Sea-Fish, but also from that of Rivers; where the Apua, nor

he Manis, are at all found. Erat is, (fayes the Interpreter of Xenophon, speaking of the River Chalus) magnis, mansuetisque piscibus refertus, quos Syri pro Dijs habebant, neque eos lædi patiebantur, sicuti nec columbas. As doing them manifest injury, accuse them for the Doves, I shall examine the truth of the report elsewhere: but for the Fishes. nothing could have been spoken more falle. For, if they would not suffer them to receive any harme, as being the Gods they worshipped; why then did they carry them to Ferusalem, and sell them to the Jewes, for food? Certainly this had been so unpardonable a Crime, as would have deferved to have been punished, not with swellings only, but even with death. Tyri quoque, (saith Nehemias,) habitabant in ea, inferentes pisces, & omnia venalia, & vendebant filijs Fehuda in ipsa Ferusalem. You synag. 2 may see other proofes of this, in Mr. Selden; who hath retracted this Errour, but not the ground of it: but I shall speake of this hereafter.

> But to shew the vanity of this Fable vet another way: I shall demand of these Authors above named, whence they have learnt, that the Syrians worshipped Fishes, instead of Gods; and for that reason, abstained from eating of them ! I conceive, the answer will be given in these two words:

> > Common

Common Tradition. We must therefore ex-

12

amine, what this Tradition is, that we may be able to judge, whether it be true or not Aratus, and Hyginus report out of the An In Phei-cients, that an egge of a prodigious bigness cap de chich the Tilles have into the River Euphrates; Piscibus, which the Fishes having by accident cast up Lib. Fe- upon the shore, it was so warmed by the but Cap. hear of a flight of Pigeons, which fate up on it, as upon other egges, that at the end of some certaine number of dayes it was hatched; and there came forth Venus_who lived on earth so vertuously, that being afterwards taken up into Heaven, she intreat ed of *Jupiter*, that those Fishes, which had preserved the egge, whence she came forth from shipwrack, might be placed among the Stars. Her request was granted; and ever fince, the Syrians, whom Authors usually confound with the Assyrians, have had Fishcs, and Doves, in great veneration. Others vid. C. fay, that the Syrians did not begin to woreer. Yuf- ship them, and to place their silver Images cul.qu.5- in their Temples, till the time that the daugh Georg. 3. ter of Venus, falling into the Poole Boeth, Ara. In. was there turned into a Fish. And now see, what excellent reason we have, to receive this Tradition for a true one. What

learned people we should be, had we no o-

ther Historians, but the Poets! I know ve-

by well, that the Fable might possibly have taken its originall from the History: but where shall we find those can witnesse, that it did so? Whereas, on the other fide, we know, that these Fables are as ancient with the Greekes, as Astrology it selfe. We may therefore, from this very particular passage, conclude, what manner of spirit reigned in the writers of this Nation; whose delight it alwayes hath been, to put their foolish Fables upon the world, for Truths. And here I shall adventure to deliver, what I have fometimes conceived, touching the ground of this Errour. Sidon, in the language of the Phænicians, who are Syrians, signifies a Fish, as Heurnius reports, after Fustin. Now Sidon is a part of Syria, which Barber, in Arabick fignifies an Inflation, or Swel- Phil. in ling, as Kirstenius affirmes. I have there-Chald f. fore doubted, whether or no the Greekes, Note in who turned all things into Fables, might Muh. not possibly have forged this Story, of the fol. 16. Syrians swelling, by reason of their Fish.

5. This other Conjecture is nor, in my judgment, very farre wide of the truth: namely; that the Syrians were accused of worshipping Fishes, because they worshiped the Idol Dagon; which some have conceived to have been halfe Fish, and halfe Man, in the forme of a Triton, or Syren: but with

this

this difference, that it had the head of a Fig. Idolum Dagon, (faith Lyranus, after the Rab bins) quod colebatur a Philistais, habebat caput piscis: ideo vocatur Dagon; quia 37 dag pilcis significat. I am not ignorant, that there are, that are of opinion, it was in figure like a young Damsell, covered all over with cares of corne, which they conceive to have been meant for the Goddesse Ceres: For Dagan fignifies also, Frumentum. But thek mens conjectures are not so very wel grounded, as we shall see hereafter. And here Scaliger, in his Booke de Emendatione Temporum, reproves Philo Bibliensis, for saying that Dayde, was as much as Siron; and will have Dayar, by all meanes to fignific rybuar, Piscator, or Piscolus, from the Hebrew word Dagah, Pilcis; and that, by this Dagan, is meant the Goddesse Desceta, and not any God at all. But if one should aske Scaliger his reason, he could give no other then this; that Dag, or Dagah, signifies a Fish. Be it io; but it also signifies Frumentum, Corne: so that it concernes him to give a reason, why we should rather interpret Dagab, Piscis, a Fish, then Dagan, Frumentum; Corne. If he alledge for himselfe, that some Authors affirme, that the Syrians worshipped not this Idol for any other reason, but because that a certaine Sea-Monster; which

which was feen to come dayly from the Red Sea, taught them many secrets in the businelle of Husbandry; but, being unable to endure long out of its proper Element, it returned still in the evening to the Sea againe; and in the morning alwayes came up againe to Babylon: I answer, that this Story, besides that it carries little shew of probability with it, is not delivered for a truth, by any Authentique Historian. I am therefore inclined to believe with Helladius, in Phot. Photius, that this was neither Monster, nor Fish; but rather a Man, cloathed with the skin of some Fish, who made his retirements towards the Red Sea; and by this meanes gave occasion to this Fable. that Scaliger is manifestly convinced of errour, in maintaining that this Dagon, was the Goddesse Derceto, and not a God: for besides that all Greek Authors make Dagon of the vid.los. Malculine gender, and not of the Forminine; Philon. Dayar ocies, Dagon qui est: and not, "ies, que est: Reason it selfe, which all men ought to submit to, shewes clearely that it was not a Woman, (whose sexe rendred her unapt for travell,) but some Man, that first shewed the Syrians the manner of tilling the ground: seeing that their countrey, or at least that of their neighbours, was without controversie the first inhabited, either before, or after the Flood.

Vnheard-of Curiosities.

i6

Flood. To this Reason we way adde the Authority of Eufebius O'S' Dayov ened' oupe of τον, και άροτρον, εκλήθη Σευς άροσει Ο. Dagon autem Frumenta invenit, atque Aratrum: ac tdeo Fupiter Aratrius nuncupatus est. You may also see Annius lib. 6. and Gyralsprings. dus, in his Syntagm. So that this Idol Dagon might be, one halfe in the shape of a Man, covered all over with cares of Corne by reason of his having taught the Syrians the manner of Tillage; and the other halfe in the fashion of a Fish; because of his wearing a Fishes Skinne, and his retiring towards the Red-The passage of Philo, which Scaliger indeavours to refute, is this. Patris regnum Cælus possidens, Terram sororem in matrimoni-Euste de um duxit : qua sibi quatuor filios peperit; J. zaglilum, quem et Saturnum dicunt; Bætilum; rai Δάγων, ος έςι Σίτων, Dagona, qui et Frumentarius appellatur; ac postremò Atlanta. But to returne to my defence of the Jewes: For I should not have troubled my selfe in the justification of the Syrians, but onely to let the world see, what liberty mentake to themselves, wrongfully to accuse the Easterne people. Not that I undertake to cleare them wholy from errouts: I should in so doing, thew my felfe much more blinde, then they: But onely to make it appeare, that of a thoufand crimes which they are accused of, they are not guilty of ten. 6. There

6. There is therefore scarcely any one Author, either Greeke or Latine, (that I know,) save onely Genebrard, and Moncaus, which doth not confidently condemne the Jewes, of being guilty of Idolatry; I mean those that revolted from their lawfull King. For, what can be more true, (fay these men) then that the Samaritans worshiped Golden Calves, seeing that God himselfe reproves them for it? Who then can cleare them, in. point of Idolatry : Let us now lay downe an Antecedent like this, and then see, if we can thence deduce a like Conclusion. Christians have been knowne to worship Idols, and God himselfe hath reproved them forit: Therefore all Christians are Idolaters. What a Consequence here is! I shall therefore indeavour to cleare this matter, and make it appeare that the Samaritans are unjustly accused, in the matter of the Golden Calves.

The History, which is the onely true one 3. Reg. in the world, teaches us, that after the death c.12. of Solomon, (whom many very inconfiderately reckon among the Damned,) his Scep-. ter was put into the hands of his Successor: who being a young man, was utterly unacquainted with the Rules of Governing well; which are confiftent with Age onely. This new King therefore comming to the Crown,

fignes;

his subjects desired of him the diminution of some certaine great impositions, which his Father (who could not in this deserve the name of a wife man,) had charged them with. But they were so far from being relieved, as that they had heavier Taxes layd upon them; through the evill Counsell of the King, which is the readiest cause of the subversion of Kingdomes, and the best-grounded Monarchies in the World. At length his People revolt from him: and that with fo great heigth of malice, and with so vnanimous a consent, as that of Twelve Tribes, there continued onely two; Fudah and Benjamin, in their obedience to their lawfull King: The rest elected Ferv boam for their King; who made choice of Samaria for the place of his abode; where by vling such meanes, as might have become the most knowing Politicians of the Ancient Law, he kept this People so pliant, and obe dient to his Commands, that they never afterwards acknowledged the Scepter, from whence they had revolted.

Now, one of the principal meanes that he made vie of, was; that having confidered with himselfe, that there was nothing more likely to draw back the hearts of this people towards *Rehoboam* againe, than their conversation which they were to have with the

Two Tribes, which continued at Ferusar lein: (for they were necessarily to appeare, three times in the year, before the Lord in Ferusalem:) he resolved with himselfe. to establish the same object of Adoration in Samaria, that was at Ferusalem. Now, in the Temple, there was the Arke, and the Cherubins, which Moses had made, according to the Patterne which God had shewed him in the Mount. Feroboam therefore makes the same in Samaria; it not being necessary to make an Arke also: for you must note, the Arke was made, onely to hold the broken Tables of the Law; as you may see in Deuteronomy. But what : you can. 10. will fay, were the Cherubins made by Mo. V.s. fes, fashioned like Calves, then ? Yes, most certainly: fince that those which Feroboam made, were but in imitation of them. And had they been of any other figure, he had then imitated that figure; and had not so much as dreamt of making Calves: seeing his purpose onely was to retaine his people in their obedience, by the same forme of worship, that they used at Ferusalem. Otherwise, how imprudent should he have been, in going about to introduce a strange Religion, which they had never before knowne: This would have been a meanes rather to have ruined himselfe, and his de-

 Γ_{VV} 0

Vnheard-of Curiosities.

fignes; and to cause his new gotten Subjects to returne to their old Allegiance.

7. Now, that the Cherubins, which Mofes made to the Arke, were in the figure of Calves, that which Aaron made in the Wildernesse, at the intreaty of the children of Ifrael, proves fufficiently : for doubtlesse this High Priest did nothing, but what he conceived Moses himselfe would have done, had he been alive. (For he tooke upon him to doe what he did, upon a prefumption that Moses was taken away by God; seeing he had not come downe from the Mount, in the space of full forty dayes: whereas, at other times, he had never tarried there above a day.) He made therefore a Cherubin indeed; but it was after the patterne that was shewed to Moses, as also to himself, and the seventy Elders. Inspice, & fac secundum exemplar, quod tibi-in monte monstratum est. Now, in this Patterne, they faw the glory of God, in like manner, as it was afterwards feene by E-Zekiel, and St. Fohn: where God appeared, fitting betwixt foure Cherubins, whereof the first was in figure like a Man; the second, like a Lion; the third, like a Cafe; and the fourth, like an Eagle: And upon these visible. Cherubins, as upon a Throne, were the Children of Ifrael to find placed,

the Majesty of the Invisible God, in their passage through the Wildernesse; according as he had promised them, by the mouth of his servant Moses. Ecce Ego mittam Angelum meum, qui pracedat te. And then afterwards, explaining how himselfe would rest upon this Angell, called by the name of אאהים, Elohim, Dij, a name common to the Angels too, he addes : Et erit nomen meum in illo, & facies mea præcedet te, & requiem da-These Promises therefore having bo tibi. been so often made to the People by Moles, now that they beleeved him to have been either deyoured by some wilde beast, in some corner of the Mountaine; or else, as the wifer fort amongst them thought, that he was taken away by God; they required at the hands of his Successor, Aaron, the fulfilling of these very Promises. Surge, said they unto him, fac nobis Deum Elohim, or, Deos Elohim, qui pracedant nos: Moysi enim huic viro qui eduxit nos de terrà Ægypti, iznoramus quid acciderit: as if they should have faid: We know not what is become of Moses, that should have made us this Angell, that was to march before us: doe Thou thy selfe therefore make it, that so we may enter into the Land of Promise. therefore made them one of these Cherubins, on which they had seene God sitting. Now, why

Exod. 25. Exod.

02

why he made this Cherubin in the shape of a Calf, rather then in any other-of the three Figures, Abiudan, a Jew, speaking of this particular, (a Manuscript Copy of whole Workes Mr. Otho hath brought out of the East,) sayes nothing at all. Moncaus, who hath likewise written of this Subject, gives the reason out of Dionysius In Vit. the Areopagite : namely , that Aaron made aur. Cap. choice of the Cherubin, that was figured like a Calfe; because that being in the appearance more abfurd, then any of the rest, the Children of Israel would not be so apt to worship it. This Calfe therefore, or Che tubin, was made by Aaron; not as if he had first cast the gold in a rude Masse, and this afterwards shaped it, working it in the same manner, as Statuaries doe, in rude Stones: as Moncaus is of opinion. Nor yet, that this Calfe came out by chance, without any purposed designe of Aaron, in making it is shape like a Calfe: as most of the Ancient have been bold to affirme: But having first made a Mould, Et projeci illud (aurum) il fornacem, egressusque est hic Vitulus : he call the gold into it, and there came forth this Calfe. If the People afterwards provoked God to wrath thereby, it was not for making the Calfe, but for worshipping it. Martiall sayes

Qui fingit sacros auro, vel marmore vultus, Non facit ille Deos, qui rogat, ille facit.

Neither doe we any where read that Auron was at all reproved of God, for having made it.

So that the conclusion, which we may draw from hence, is; that the Cherubins which were on the Arke, were really made in the shape of Calves: and that according to this Doctrine, Ferologia, in imitating them, could not in any wise be counted an Idolater, but onely a Schismatick, or Separatist from the worship, that was performed in Fernsalem: norwithstanding that the same befell him, that had happened to Aaron before him; namely, that though His Purpose was good, yet nevertheleffe there were among the People, that worthipped them: and this is the reason, they are reproved by God. Now that hee had no intention at all to fet up Idolatry, by this Act, appeares clearly in this; that the Kings his Successors, who all were of the same Beliefe, are not any where reproved for this crime, untill the Reigne of wicked Achab, who was seduced by his wife fezabell, the most Imperious woman that ever was. Thus we read in the History of Kings, that Fehu did that which

<u>V</u>

10.30,

74

was right in the fight of the Lord; Yetneverthelesse, Non reliquit vitulos aureos, qui 4. Reg. erant in Bethel, & in Dan. And I would faine know, if this King should have wor -shipped these Calves, how he could have done that which was right in the fight of God, who never punished his people so se verely, as when they had given themselve up to worship Idols? And how Asa in like manner, King of Samaria, could have walk ed in the wayes of David, if he had been tainted with this horrible Crime ? Et feet Asa rectum ante conspectum Domini, sicut Da vid pater ejus: and yet notwithstanding, Excelsa non abstulit, He took not away the High places, that is to fay, Vitulos, the Calves. As if the Author of the holy Scriptureshad purposed to prevent the Objection which is usually made, concerning the erecting of their Calves to an evill End: for thele words sceme to have been set downe so expresly, meerly for the confutation of those men that are wedded to their owne wills, and for the clearing of the truth of that, which I have here delivered : Cor Asa perfectum fuit cum Domino, etsi Excelsa non abstulerit. Which is an Infallible Argument, that they acknowledged in these Calves, or Cherubins, the fame which they of ferusalem did in those Country, he sent into it Colonies out of Perof the Arke; namely, the presence of the In-

visible God, sitting there, as on his Throne, notwithstanding that many, out of simplicity, worshipped the bare figure of this Work of Mens hands: And this is that, which God fo often complaines of. As if this were the Literall meaning of this Passage; to wit: that the Kings of Israel had indeed done that which was right in the fight of God, and had lived according to his Lawes: yet, that they might have done better, if they had taken away these Cherubins, which were the cause of the destruction of many, who made other use of them, then that for which they were intended. I remember to have read somewhere to this purpose, of a Bishop of Marseille; who seeing, that many of his people behaved themselves toward the Images, that are usually placed in Churches, with so great respect, as that one day he observed some of their actions that came within the compasse of Idolatry; he caused them all to be broken to pieces, leaving only a very few in some certain places of his Diocess: So true it is, that we often abuse thosethings, which were instituted only to good ends. I shall only adde one word more, for the defending of the Innocence of the Samaritans; which is: that, when SalmonaZar had ransacked their sia; who falling to commit Idolatry; as they

had used to doe in their own Country; God fent Lions among them, to deftroy them 4Reg. 17 For remedy of which calamity, they could finde out no better expedient, then to lend for one of the Jewish Priests, whom they had lead away captives, for to instruct their calamity: which is a certaine Argument, faith Abindan, that all the Samaritans were nor Idolaters. This observation of Abiudan, Moncaus takes no notice of; yet He hathalfo an Observation, which Abindan passes by (out of the hate, I conceave, that he bare to the True Melsias, and because that the Testimony made against himselfe;) namely, that when our Saviour Christ uttered the Story, or Parable of the Travailer, that fell among Theeves, the Samaritan is there faid to have had more pity on him, then the Priest of Ferulatem. I shall adde here, that the same God, being become Man, did not at all deny himselfe to be a'Samaritan, when he was called fo by way of reproach: which doubtlesse he would have done, if he had knowne this people to be wholy Idolatrous.

> 9. But now, in the progresse of this Discourse, the Curious Critick, who uses to leave nothing unfifted, may happily propose this Question to me. If the Cherubins of the

> > Arke

Arke were made in the forme of Calves; what should move almost all Writers to maintaine, that they were in shape like young Boyes! I confesse, I could willingly have put off the answering this Question (which neither Abiudan, nor Moncaus, have taken a-Idolaters in the Worship of the true God; my notice of, or else have purposely passed it which being done, they were freed from that by,) to some other time: But seeing that I write to the Learned, it concernes me willingly to omit nothing, that makes for my subject; that so I be not ranked in the number of those men, that when they write of any argument, doe voluntarily flip over the choycest things in it. I say then, in two words, and without making any long dilcourse on ir, (fince that I handle this very Question in another place,) that all the Authors, both Greek, and Latine, and the greatest part of the Jewish too, as Aben-Ezra, Scelomoh, and the Talmudists, who have attributed the forme of young Boyes to these Cherubins, have done it upon such weake grounds; that we need but onely to rehearle them, to shew their insufficiency. There is nothing, (say many of these last named Authors, cited by Kimchi,) which more confirmes the opinion, of the Cherubins being made in the figure of Young Men, or Lads, then the Etymology of their name. For Chernb, is compounded of the servile Letter

Exed.

Letter \(\sigma\) Caph, which fignifies ficut, and of the word Roy, Rabeia which fignifies in Chaldee, a Young Boy, or Youth; and in the plurall number \(\times\) \(\sigma\) Cherabaia, that is to fay, ficut Adolescentes, or Puers. Very good, but Moses spoke not Chaldee, but Hebrew: and therefore, if this controversie must be decided by the Etymology of the name, why cannot I say with much more reason, out of the Hebrew Etymology of the word, that these two Cherubins were made in the form of Saddles; seeing that the word \(\sigma\) whence \(\sigma\) Cherub is said to be derived by transposing the letters into \(\sigma\) Cherab, which signifies \(\sigma\). Sequitare, is in Hebrew, a Saddle: as you may see in Leviticus, and in the first book of the

fee in Leviticus, and in the first book of the Kings. Or else we may say, that these Cherubins were made in the form of Raine: seeing that 23 3 Cherabib, a word that cometh very near Cherubin, signifies sicut pluvia.

Let us now examine the Reasons brought by the Latines, and see whether or nother are of any more weight, then these of the Hebrew writers.

Cajetan upon Exodus thinks himselfeto have found out the powerfullest Argument, that hath yet been brought by any, for to prove that their Figure was like that of two Young Men: because that in the Bible, where the Vulgar Translation renders it, re-

spiciantque se mutuo, the original sounds thus Exed. in the Hebrew, & facies corum vir adfratrem suum. Whence he thinks, he hath hit the nail on the head; and concludes, that for terrain these cherubins were of humane shape: Butthose that are skilfull in the Hebrew, will readily find this conclusion to be very infirm, and of no force; or otherwise we may as well conclude, that the starres, the curtains of the Tabernacle, and a thousand other things in the old Testament, were likewise of Humane shape, since that Isaiah, speaking of the stars, where the vulgar Translation hath, Neg. unum reliquum fuit, the Hebrew Text sayes, & vir non est substractus: and in Exodus, where speaking of the curtains of the Tabernacle, the Vulgar sayes, quing, cortina sibi iung antur mutuo, it is in Hebrew, & quinque cortina trunt conjunct a, mulierem ad fororem suam. So Exechiel speaking of the wings of the Beasts, where the Translation hath, & vocem alarum animalium, percutientium alteram ad alteram, the Hebrew is, Mulierum ad sororemsuam. In Genesis, where mention is made of the parts of the Sacrifice, where the Translation is,Et utrasque partes contra se altrinsecus posuu, in Hebrew it is, & dedit virum, partem ejus e regione proximi sui. And lastly in Isaiah, In Lexiwhere it is Translated, Alter alterum non ch. quasivit. Many other examples of this kind

arc

In Lexi-are collected up, by Kimchi, Munster For sterus, and Pagnin. I shall omit whatsoeve the rest of interpreters have delivered, concerning these Cherubins; because that you may see in Cajetan, that their reasons area weak as his own, what soever Pradus, and Villalpandus affirm to the contrary; who la bour much to bring in another lense, but an confuted by Oleaster. In the mean time cannot but wonder very much at these men that have taken so much pains to hunt alti empty founds to no purpose; not conside ring that they might as well at first have polittively affirmed chiat these Cherubins had t Humane shape, because that one of the four feen by Moses, Aaron, the seventy Elder, Ezechiel, and Saint Fohn, was in figure like a Man. This Conjecture might have palled for tolerable, had not the wuth been by us now brought to light. We may therefore by the means clear our hands of these doubts; a allo of that other, concerning the forme of the Cherubin that was placed at the entrance of Paradife, to keep out Adam, and his po sterity. For it may be answered in one word that it was that of these foure Cherubins which had the shape of a Lion; this form being the most proper for such a purpole feeing there is nothing in the world more to rible then a Roaring Lion. And thus are

those difficulties cleared, which have long Queff. since been brought in by Theodoret, Bar-Ce- Paradiso. pha, Procopius Gazaus, Jacobus Chius, and In 3 Ge-Theodorus Bishop of Heraclea; who, after a nes. long and tedious dispute, conclude, though symb. not very rationally, that this Guard was not a Cherubin, but some other thing of Power, like a Cherubin; just as we dresse up some frightfull Scar-crowes, and place them in Gardens, and Hemp-plots, to fright away the Birds. And their reason is, because that Cherubins being Spirits very highly exalted, and of the second Order of the First Hierarchy, they are never sent on the Earth, but are alwayes attending before the Throne of God: notwithstanding, the Master of the Sentences, Scotus, Gabriel, Durand, and Gre- In 2. gorius de Valentia, affirm the contrary. Now sent. what the reason should be of the Cherubins, ibid. feen by Moses, EZekiel, and the rest, appear- Tom. 1. ing in shapes so different, and, as it may different feem, so repugnant to the nature of a Bleffed Spirit, I must refer you, for satisfaction, to S. Dionysius, S. Gregory, and the rest of the Fathers: since it is sufficient for me to have here proved, that the Golden Calfe made in the Wildernesse, and those other which feroboam made, were fashioned according to this Divine Vision; so that the Ancients are by this means cleared of the Crimes, which they

Vnheard-of Curiosities.

they are injuriously charged withall. 10. If I had not already exceeded the just length of a Chapter, I should hereanfwer to an Imputation, which is yet great er then all the rest, charged upon the Jewes: namely, that they of old burned their Children to the Idol Moloc. I shall reserve the full handling of this point, till some other time; and shall only say this by the way, In Cat. 6. Mif. that R. Foleph Caro Observes, that throughout Thor. the whole Scripture, where there is mention tract. made of this Idol, and of the Sacrifice that was done unto it, it never uses any word that fignifies, to Burne, Kill, or Put to death, but, to Passe, and, to Offer. And indeed they did no more, but caused their Children to passe over the Fire: which was a kind of Adoration, and Service, shewed toward this Element, and Introduced by wicked Cham. Philosoph. Barb. in Ignem, (faith Heurnius) in Ur , Chaldaorum Chald. Urbe, Abrahami patria, adorandum ponit; gravi pæna in pertinaces promulgata: where there is no mention made of any Command, to Burne, nor to Kill. And for the clearing of this Truth, I shall refer the Curious Readcomment. er, (because I must not any longer dwell on in Reg. & in Pfal. this point) to Kimchi, Salomo Farchi, Abari banel, and to Moses Ægyptius, who knew more of the Customes of the Ancients, then In More any other Author that ever wrote. Yet I deny 3. C. 30.

deny not, but that the Persian Colonies of Sepharvaim, who came and dwelt in Sama- 4. Res. ria, did Sacrifice their Children to their 17. Gods, Adramelech, and Anamelech: but, that the Hebrewes did the same to Moloch, will never be made appeare; whatfoever Mr. Selden say to the contrary. And who can believe that Salomon murdered little Children, or cast them into the Fire, because the Scripture sayes of him, Colebat Salomon Aftharten, Deam Sidoniorum ; & Moloch, Idolum Ammonitarum? He must not be Master of Common Sense, that can have any fuchthought about him: So true is that, which we have already delivered; that they only passed over the Fire. And this Unhappy Custome hath so spread it selfe ever since, throughout the whole World; that even in America, the Brasilians doe the same, as Fa-. hannes Lerius reports of them: and among Marig. Christians also, Mothets doe yearely cause their Children to passe over the Fire of St... John, to this day. Which Custome ought to be abolished, seeing it hath been anciently condemned by a Councell held at Con-Syn. 6. in frantinople: and Theodoret proves clearly, 64. that this Custome of these Fires, is still a In cap. rellick of the Ancient Abominations. Reg. Videaneur Olaus Mag. in Histor. Gothica. Leo African, in Descript. Afric. D. le. Chrysoftom. qui in Homil. de Mativitat. S. Ioannis. Solennes ejus ho-noti nuguates excitatas ait, ipsiinque diem Lampada appellatum.

CHAF.

CHAP. II.

That many things are esteemed Ridiculous, and Dangerous, in the Bookes of the Fewes; which yet are, without any blame, maintained by Christian Writers.

THE CONTENTS.

Hat we ought not to rest on the bare Letter of the Scriptures.

Authors that have treated of Ridiculous Subjects, without being reproved.

3. The Bookes of the Jewes leffe dangerows, then those of the Heathens; which yet are allowed by the Christian Fathers.

4. The Feast that God is to make for the Elect, with the Flesh of a Whale, how to be understood.

5. Ten things created on the Even before the Sabbath; and what they were.

6. The Opinions of the Ancient, and Moderne Writers, touching the end of the World: what Fathers of the Church have been of the Fewes opinion in this Particular.

7. Divers opinions, concerning the number of yeares from the Creation to our Saviour Christ:

Christ: and what we ought to conclude, as touching the End of the World.

8. The Ancient Rabbins are fally accused of speaking ill of our Saviour Jesus Christ.

The third Objection in the Precedent Chapter, and an Enumeration of some Errors of great Importance in our owne Books.

Ut be it so (may some say,) that the Jewes are free from the guilt' of these Crimes, and their books not polluted with these Abomi-

nations: yet it cannot be denied, but that they have vented in them many fooleries, more ridiculous ones, then a man can The 2d. imagine; and even some, that are very dange. Objectrous too: and that therefore they are unworthy our reading; and the Curiofities found in them, not to be valued at all. This is the ferond Objection, which was proposed in the precedent Chapter. '

If I were here to deal only with those that swer, are free from Passion, it would be easie for meto satisfie them in two words: but fince that I may chance to have to do with opinionative, felf-conceited men; it will concern me to convince them by the force of Reasons, backed with examples. I fay then, that suppose there are many fooleries, and absurd things found in the books of the Iewes

but why then do we admit of the books of the Poets, where you have nothing elfe? For what can be conceived more ridiculous, then that men should be transformed into Rocks, Rivers, Plants and Trees : or what more remote from common sense, then that Stones should discourse, Flowers, reason, and trees make their moan, and sigh out their afflictions? why were the Fables of Espeever received, which attribute the use of Reason to all things, even the most insensible that nature hath produced: And to fay the utmost in one word; Why then do we admit of the Bible, which allo make Trees, as the Vine, and the Bramble, to speak? The Trees went forth on a time to Judic. 9. anoint a King over them, and they faid unto the Olive-tree, Reigne thou over us. But the Olive-tree (aid unto them, should I leave my fatnesse, wherewith by me they honour God and man, and go to be promoted over the trees? And this Tree refusing them; they then make their addresses to the Fig-tree, and afterwards to the Vine, and at last they are constrained to come to the Bramble. What a strange Metamorphosis is here: If it be answered that these are Figures, Similitudes, and Parables, which Ioathan made use of, to expresse to the people the Tyranny of Abimelech: and that in like manner

manner the Ancient Poets proposed their Fables, under which was alwayes couched some Philosophicall secret, either Morall, or Divine: Why shall not the same Liberty be allowed to the sewes also? Will they have them to be lesse Rationall, then the rest of Mankind? or more Brutish, then very Beasts? Was there ever the like Peevishnesse seen:

If the Fewes had busied themselves. in describing the War betwixt Frogs and Mice; as *Homer* hath done: or in writing the Commendation of a Tyrant; as Polycrates hath done: the praise of Injustice, as Phavorinus: of Nero, as Cardan: of an Asse, as Apuleius, and Agrippa: of a Fly, and of a Parasiticall life, as Lucian: or of The Folly, as Erasmus: we then should have same them hooted at, for Fooles, or Mad-men. hathles: Or had they made Epitaphs, or Funerall done, in Orations, upon the death of a Cat, an Ape, divers of a Dog, a Didapper, an Asse, a Magpye, a ems. Flea, as some of our Italian Fantasticoes have done: we should no doubt heare them charged then, with the finest, wittiest, Idolatrous Foolery, that ever men were guilty of. And yet, the Authors of these Trisles, heare no one word of it. If they should yet but have taken upon them, to set down the Rules of Divination, as many of our La-

3 tine

Barth. Gothl. Introd.ad

tine Christians have done: or to teach the manner of Interpreting Dreames, as one hath done in Gochlenius, who tels you, that as soone as you are awaked, you must open a Pfalter; and the first Letter that is found, in the beginning of the Page, shall thew what shall happen. As for example, if it be A, it fignifies, the Party shall be of a Free Nature: if B, he shall be powerfull in War: C, and D, fignifies Sadnesse and Death :- E, and F, that he shall have (if he be married) a Noble Of-spring: G, denotes some sad accident to befall him: H, foreshewes the Love of Women: 1, a good and happy Life: K, Folly, and Mirth: and so forward of all the rest; the very remembrance whereof makes me laugh: If the Fewes, I say, should have busied themselves with such Sortish Impertinencies as these, would any of the Christians so much as have touched their Bookes? I shall passe by a thousand Fooleries, wherewith our owne Bookes are Ruffed; and a thousand Fopperies, which some people give credit to: as, that of Names, and Numbers, which is copioully handled by Raimundus Veronensis, in his book intituled, Opera del l'Antiqua er honorata suenza di Nomandia: wherein a man shallse by the Letters of his name, whether he shall live a long time, or not: whether of

the two shall survive, the Husband, or the Wife: What Preferments one shall rise to: What Death a man shall dye: and a world of such like Propositions, which are not onely ridiculous, but dangerous also. And now let any man, if he can, find fault with the Jewish Rabbins, whose writings are free from any such kind of Follies, as these.

3. I shall adde further, that almost all the Fathers have been of opinion, that we might lawfully read the books of the Heathen Philosophers; and such reasons are gi- Doffr. ven for it, by S. Augustine, and Theodoret, christ. as will force the frowardest Critick to sub- Cap. 39. scribe. Now every body knowes, that the Lib. 1.de greatest part of these books teach the Mul-curat. uplicity of Gods; and some of them, Ido-affett. larry also: But as for those of the Jewes, who is he, that hath ever accused them of either of these Crimes; or that found any other Doctrine taught in them, then that of the True God? And why then may not men of Learning read these, since we permit the other to be read to raw Children, that are apt to believe any thing? If there be many Fooleries to be found in them; as it is objected by those, that never read them; there is yet much lesse danger in These, then in Apostacy: neither is there any of them lo Absurd, but that some Good thing may

be drawen from them; nor yet so barren, but that they afford matter, to raise some wholsome Doctrine upon. Let us therefore take the Truths, and passe by the Dreames: let us gather the Roses, and let alone the Thornes: let us take up the Pearles, and cast away the Shels. In a word, let Lib. 4.de us doe what Damascene teacheth us: Si aufide Ortem, saith he, ab his qui foris sunt decerper quippiam utile valuerimus, non aspernabile est. Efficiamur probati Trape ite, legitimum & purum aurum acervantes, adulterinum autem refutantes: sumamus sermones optimos, Deos autem ridiculos, & fabulas alienas, canibus projeciamus.

4. We will now go another way to work, and shew, that many of those things in the books of the Rabbins, which are accounted ridiculous, by those that have them only by heare-say, have not yet been accounted so, by Learned Christians, and such as know the Ancients manner of writing; and that consequently, they are not to be rejected. We shall therefore make choice of some of the most Mysticall Passage that are to be found in their books; and shew how those strange doctrines are to be understood; that so by these, the Reader may be able to judge of all the rest.

If there be any thing worthy to be accounted

counted ridiculous, and abfurd, that doubtlesse appears to be the most likely, which the Ancient Jewes have delivered, of a certain Feast that God is to make the Saints hereafter. For they write, that when God had created the world, feeing the bignesse of a Whale which he had lodged in the sea, to Others be so prodigiously vast, as that he had not freshed two. made any thing that was sufficient to nourish him; he presently killed him, and salted him up, as weuse to do Flesh, purposing one day to feast the Elect therewith. Contribulasti, faith the Pfalmist, capita draconum in aquis, tu confregisti capita draconis. Possibly this Text may have given occasion of the Fable of Python, flain by Apollo: and if so; this later story seems much more tollerable, then the other. For, what madnesse is it to imagine, that God should afterward salt up this Dragon, or this Whale called לכאטן בעין Levi- לכאטן athan; and that it should be afterwards kept, than sigtill the Last Day, to make a Feast for those, nifiesalso that should then have no more need to eat : 2 Dra-And what excellent entertainment should God gon. bestow upon his Children, when their cheare should only be, of the sless of a Powdered Dragon: This were one of the groffest Fooleries that could be, were there no other Doctrine couched under this Tradition, then

what the bare Letter affords: and who can

possibly

possibly imagine the Jewes to be a people fo void of sence, as simply to believe this without looking after any other meaning of the thing: Let us rather hereafter entermin abetter opinion of this people; and esteem otherwise of those men, whose wisdome the Christian Fathers have so deservedly admired. I will not say, but that the simpler son of people among the Jewes, may peradvencure have believed, in the Literall sense, this Mysterious Fable; as there are among us, that believe the stories of Alope. For there are found some old women so simple, and I my self have seen such, that hearing tell, how the Liontalked with the Fox, and he with his companions, that so he might devoure the hennes; they really believed, that in times past Beasts did speak and discourse of their own affairs; taking occasion from what they have heard at Church, of the speaking of Baalams Asse. But as Æsope is very well known to have couched some mysterious sense, under his Fables; In like manner did these wise Ancients, in those which they devised. Scio (layes Paulus Fagius) veteres Judaorum Rabbinos aliud mysterium hat de reprodere voluisse, qualia & alia apad illos inveniuntur. And then, that he might take off the vail from these My-Isna ann. Acries, and bring them into the open light, he

presently addes: Tu, per convivium, summam illam, ac æternam fælicitatem, que justi in futuro perfruentur, intellige. Tum nimirum edent, & devorabunt Leviathan illum, hoc est, Satanam; cum viderint illum, cum omnibusministris suis, in aterna pracipitari Tartara. Infomuch that he must be no Man, that sees not that this Doctrine is very little different from that of our Saviour Fesus Christ, who sayes: That, in his Kingdome, the iust hall eat and drink at his Table: understanding by these expressions, Everlasting Blisse.

Vnbeard-of Curiosities.

5. There is another Tradition found in the books of the Fewes, that appears as ridiculous as the former: which is ; that at the 16. fee. Creation of the world, on the Even before the 100. vi-Sabbath, there were ten Miracles created. The deaur & first was That Producious Opening of L. R. Moses first was, That Prodigious Opening of the Egypt, Earth, that swallowed up Corah & his Com- in More panions. The second, the Well, or Spring, 1,6,65. that issued out of the Rocke, and followed the Children of Ifrael; and which (fay They) God granted unto them, for the merits of Miriam, Moses his sister: as also the Manna, that went along with them; and the Miraculous Cloud, that attended on Aaron and his fellowes; after whose death, all these Miracles The Third was, Balaams Affe: The Fourth, the Rainbow. The Fifth, the Manna: The Sixt, Moses his Rod, by which hec

con um.

consummatio istorum, sextus millesimus annus eff. So St. Hilary; who, expounding those words of the Evangelist, Et post sex dies transfiguratus est; saith, cùm post sex dies gloria Dominica habitus oftenditur, namely, in his Transfiguration upon Mount Tabor , fex millium scilicet annorum evolutis, regni calestis honor prafiguratur. So St. Ambrole likewise; who, having the same conceit with St. Hilary, In 17. expresser himselfe almost in the very same Math. words. This was the Opinion also of Saint Augustine, in his booke de Civitate Dei, lib. 20. cap. 7. of St. Hierome; on those words of expos. Pf.

David; Quoniam mille anni, ante oculos tuos, 89. al sicut dies hesterna que preterijt; who saies: Crprhundred eighty four yeares; of Orpheus, who believed it should last a hundred and twenty for four hundred and twenty folios appellari: ut scilicet, quia Mundus in thousand yeares; as Cassander did, eighten hundred Thousand. I shall only shew, what the opinion was of the Learned Fathers of the Church, whose lives are irreprovable: a verus exercetur Sabbatismus, et Circumcisionis of the control namely, of Irenaus, who, according to the puritas redditur. In a word, it would aske it opinion of the Jewes, saies, that, Quotquot die selfe a particular Volume, but to set downe bus hie factus est mundus, tot et Millenis anni all, that the rest of the Fathers have writ-

The Curious Reader that

netus,

Harm. netus, Galatinus, Adr. Finus, Sixtus Senensis. Mund. Paulus Riccius. Lud. Vives, Hieronymus Magiron.7.cap. us, Egidius Columnus, and Fridericus Em-7.Lib.4. stius. Flag. con . 7. The Objection that might be made in tra Iud. this Point, would fall heavy, as well upon Lib. 5. the Rabbins, as upon the Fathers, who have Annot. followed them; but that wee shall be able to de off. make it appear to be of no weight at all. For, sph. Int. fay they, if the World be to last but fixe Thousand yeares; then by consequence, the Lib. de Day of Judgment may be foreknowne, which Exust. - contradicts the Holy Scriptures. I answer, mund. de that those Learned men have not at all defi-Define ned the dayes, but only the yeares: Now, rundi. the number of the yeares, that are passed since the Creation, to this present, is uncertain; therefore are the Dayes also uncertaine. Now that the number of yeares is uncertaine, will appeare evidently, by comparing the diverle, Opinions of these following Authors, who have with all possible Diligence computed the yeares, from the Creation, untill Christ; and yet there is in their Computations, above hundred years difference: Judg you then, what Those of the the Confequence must be. Jewes that have turned Christians, as Hieronymus à Sancta Fide, Paulus à Sancta Maria, Lyranus, Brugensis, and others, which are followed by Georgius Venetus, Galatinus,

Franciscus Georgius, and Steuchus, account from the Creation of the World, to the Nativity of our Saviour Christ, 3760 Paulus Forosemproniensis. 520i Arnaldus Pontacus, 4088 Pererius, Bellarmine, and Baronius. 4022 Genebrard, 4090 SuareZ; 4000 Ribera. 40*95* Onuphrius Panvinius, 631Q Carolus Bowillus 398g Malvenda, 4133 Foleph Scaliger, *39*48 Sixtus Senensis, Massaus, and many others. 396z Fo. Picus Mirandula, 3958 Peter Galls (ard, 3964 Foannes Lucidus, and many others, 3960 Gerardus Mercator, 3928 Fanlenius, 3970 Paulus Palatius 4000 Hence we may fafely conclude, that neither the number of daies, nor yet of yeare

passed since the Creation, can be exactly knowne, without some speciall Revelation; notwithstanding the endeavours of the Learned Pererius to prove the contrary; who, ta- In Gon, king occasion from these words of the Wise lib.s. man, dies seculi quis dinumerat ? affirmeth, that he speaketh not here of the Teares, but

of the Daies: and that, though the number of These cannot be knowne, yet the Other may. Ergo, sayes he, after a long Discourse, Numerus annorum Munditeneri potest, dierum autem non potest. But he ought first to have reconciled these Authors among themselves; and to shew, how they have erred in their Computations. And when all is done, the nearest that a man shall be able to come to the Truth, will perhaps be about Twenty sive, or Thirty yeares, over, or under; and no otherwise.

The 3. Object.

8. The third Objection, brought by thole that will not admit the Jewes bookes to k read, seemes to have more Reason in it, the all the rest. For, if they be indeed full of scoffings against the Life of Him, who hath given Us Ours; if they accuse his Actions, detest his Doctrine, and condemne his Memory, as ignominious; in a word, if they are full of nothing but Blasphemies against Fefus Christ; who is he that could endure to read them ? And here Sixtus Senensis tilumphs over his Enemies, and reckons up all the Impleties the Israelites were ever gulty of; and there is scarcely any one kind of we kednesse, or villany, that he layes not to their charge. In a word, he numbers up, as well all the erroneous points of their Beliefe, a their Reproachfull speeches which they vo-

mitup against the Sonne of God: so that one that had not read their bookes, and knowne the Truth of the businesse, would judge them to have been written rather by Divels, then by Men. But this Author, (who had not The Anwritten against this Nation, but, as almost all wer. others have done, meerely out of the hatred is generally borne, toward these Deicides,) thought peradventure, that after the burning so many Jewish Libraries in Italy, and after that himselfe had beene an Eye-witnesse of Twelve Thousand Volumes burnt to Ashes at Cremona, he thought, I say, that after so rigorous an Inquisition, there could have been no more books left, by which wee might have been able to satisfie our selves, in the Truth of those things that are objected against the Jewes. But he had forgot to burne the writings of Galatinus too, or rather of Sebondus: (for I shall make it appeare in another place, that Galatine was never the Author of that Learned Booke, intituled, de Arcanis Catholiva fidei:) He had, I say, forgot to burne. these Learned writings too, which doe make it clearely appeare, that the greatest part of those things that are written in this Particular, is false, and prove, that the Blasphemies, which the Ancient Rabbins uttered against Felus Christ, were not meant at all of Christ, bur Redeemer, but of another Fesus, very far,

different from Ours. And this is so known a Truth, that the most furious among the Iewes dare not deny it, unlesse they deny their Talmud: So that this Confession being so much the more forcible, because it proceeds from the mouth of our Adversaries; it quite overthrowes all that Senensis, and those of his Perswasion, have brought to the contrary. I will not fay, but that the Later Rabbins doe more perversely handle the Controversy, which is betwixt Them and Us; namely, Whether Fesus Christ be the true Messies, or not: and that, among the Heats of so weighty a Dispute, they doe sometimes speake irreverently of our facred Mysterics -: But, (which is a very wonderfull thing, and which ought to convince all the enemies to the writings of these men;) among so great a number of Arguments that are brought against us, by R. David Kimchi, and R. Foseph Alboni, (1140 Iewish Rabbins, which were both very learned, and very zealous for their owne Religion:) you shall not find one Opprobrious speech uttered against Fesus Christ: as that he was a feditious person, (as he was called in his life time,) or a Magician, or an Impostor, or a Malefactor, or any other the like Blasphemous termes: notwithstanding there is scarcely any of our Christian Writers, that have written against the Iewes, which give them

not very hard language. They dispute indeed, Whether the Golpel be a Law, or not: but not, Whether the Author of it were a Wicked Man, or no. Nay, on the contrary, they rather confesse him to have religiously kept all. the Commandements of the Decalogue. They fay indeed, that he was but meere Man, and not God: being blinded by the Confession. which this God of Love made of himselfe: Ego sum vermis, & non homo : but they doc not fay, that he was a Wicked, Perfidious Person. They accuse his Apostles indeed of Ignorance, but not of Fallehood : as, when S. Paul faith, that the Israelites demanded a King of Samuel; who gave them the sonne of Cis, being about the age of forty years; whereas the Scripture seemes to say otherwise. As also, when Saint Stephen faid, that those that went downe with facob into Agypt, were seventy five soules in number; whereas in Genesis it is faid, they were but seventy in all. And so likewise in diverse other Passages, which have been, long fince, often reconciled, and cleared of Errour. They deny indeed, that in the Eucharist, a Great Body, with all its parts, can possibly be in so small a Morsell: but they doe not fay, that the Institution, and use of it in the Christian Church, is Diabolicall, as the Hereticks say. In a word, they deny indeed, that Fesus Christ is the true Messias; but they

noi

doe not say, that his Doctrine is against God. Those that desire to be more fully satisfied in this Controversie, may have recourie to a Tract, written by Genebrard, against those two Learned Jewes above named. To conclude then, both against Senensis, and all of his Opinion; I affirme, that the Ancient Rabbins are so farre from reproaching our Saviour Fesus Christ, as that, on the contrary, they allow of his Doctrine, and confirme the History, which is delivered us : as I doe clearly prove, in my Advertissement aux Doctes, touchant la necessite des lanques Orientales, which I shall, God willing, put forth very flortly.

The 4.

9. I come now to the last objection, Object. which is: that the Bookes of the Rabbins erre, in the Interpretation of the Law: and that being full of Vaine, and ridiculous Traditions, and some that are dangerous too; they ought not to be read by Christians, who are to feeke after nothing but the true Traditions of Fesus Christ, and his Church I shall not take upon me to answer fully, and in every particular, to this Objection: fince that it cannot be denied, but that the Rabbins doe erre sometimes, and that their Interpretations are sometimes wide enough of the matter. But that therefore they mult presently be burnt, or not read at all, is a-

gainit

gainst all Sence, or Reason: for, otherwise, we were to proceed in the same manner against our selves, and must condemne our owne bookes also; which are scarce y to be found, any of them, without their Errors: I speake even of those very bookes, that are of highest esteeme, and use, among us. So that if these must all be committed to the Flame, we should speedily see our Libraries Empty; and, those which shall come after us, to be left to a most profound ignorance. For, who knowes not, that the works of Tertullian favour the Sect of the Montanists, where he speaks of a new Paraelet, and a new Prophesie; as also, where he condemnes Second Marriages? If we but diligently peruse the Writings of all the rest of the Fathers, we shall find, that those of St. Cyprian maintain the Rebaptizing of fuch, as having abjured their Herefie, had been formerly baptized by Hereticks What Error is it, that the writings of the Learned origen are not polluted with ? If any man out of Curiofity desire to see a Catalogue of them, he may have recourse to the Learned Epistle of St. Ferome, ad Avitum. Doth not St. Hilary seem to detract much from the merits of our Saviour Christ, when he maintaines, that his Sacred Body was not at all capable of Suffering; and E 4

that Hunger, Thirst, Wearinesse, and the rest of Humane Infirmities, were not Naturall in him, but, as the Schoole speaks, Absumpta; Neither did Epiphanius fall into less Errors then these, when he writes, upon those words of Christ, Pater Major me est, that it was true also of his Divine Nature; and that, in the garden of Olives, he spake not these words seriously; Pater, si fiert potest, tranfeat à me Calix iste; but onely by way of Dissimulation, to deceive the Devill. I passe by many things delivered by him, touching the death of our Saviour Christ, which the purity of Divinity cannot allow of: as also, when in his disputation against Aerius, he affirmes, that one of the Precepts left by the Apostles, was, that, during the fix daies immediately before the Passeoyer, we must cat nothing but Bread, with Salt. St. Ambrose also, in his Allegories, in which he exceeds, is not alwayes blamelefte: for sometimes he lets fall such things, as are quite contradicting the sense of the Holy Scriptures. As, for example, speaking of St. Peter's sinne, he holds, that this Apostle denied not Fesus Christ as God, but onely as Man: as likewife, when he makes it Lawfull for a man, that hath put away his Wife by Divorce, to marry another woman, provided, she also had not

St. Ferome runs as farre been divorced. into the other Extreame, for, pleading for Virginity, against Fovinian, he doth so cry out against Marriage, that he makes it almost a sinne to marry : and goes on so far, as to account Second Marriages to be no other then meere Fornication, and a Trade of Bawdery. St. Augustine hath also had his many Errours: As, when he maintaines, that the Eucharist ought to be administred to little Children; and that, if they dye without Baptisme, they are Damned. You may find many other Errors in the Writings of this Learned Father: But they are such, as we may truly call, Happy ones; fince that they gave occasion to the writing of that Excellent Book of his Retractations; without which, a great part of the Learning of this most Knowing Father, had been concealed from us. I could proceed to reckon up some Errors of each of the rest of the Fathers, both Greek and Latine, for the proving of my Affertion: namely, that we have the same reason to forbeare the reading of them, that we have against the books of the Rabbins: so that, we should at length be reduced to this extremity, of having no other books, but only the Holy Scriptures. And yet neither could these passe, if we should rest only on

ocen

Gen. 33.

the Bare Letter; fincethere are some things found there, that feem contrary to Truth. 2. Reg. Thus Cajetan hath observed, that in Kings 2. we read, Michol, instead of, Merob: as z. Reg. you may perceive, by comparing it with C. 12. the First Book of the same History. the Learned have observed, that in the New Maib.27. Testament, St. Matthew, forgetting himself, hath written Zachary, for, Feremy: and St. Mark likewise, upon the same mistake, cites Marc. 1. a passage out of Isaiah, which is written in Malachi: and so likewise, when he sayes, our Saviour Christ was Crucified on the Third houre; seeing that St. Fohn saith, Item. 19. that he was but only condemned by Pilat, the Sixth houre. So likewise, where St. Luke faith, that Cainan was the Sonne of Gen. 23. Arphaxad, and Salec, the Sonne of Cainan, he contradicts the place in Genesis, where it is faid, that Salec was not Arphaxad's Grandsonne, but his Sonne, no other Generation intervening betwixt these two. And when he fayes also, that the Cave, which Abraham bought, was in Sichem; gaz. 11. which was indeed in Hebron: and that he bought it of the Sons of Emor, the Sonne of Sichem: whereas Moses sayes, it was, of Ephron the Hittite. And so likewise, when he sayes, that Emor was Sichem's Sonne, when as it is faid in Genesis, quite contra-

Unheard-of Curiosities.

ry, that Emor was Sichem's Father, and not his Sonne. I shall not here undertake to iustifie all these Passages: many great Personages, of former Ages, have already done it very happily: so that we cannot any longer, without manifest Injury, say, that there is any Errour at all in them. for the Errors of the Fathers, I should rather think charitably of them, and fay; that, as St. Ferome complained in his Time, Ep. ad that the Writings of Origen had beene cor- comments. rupted by some Impostor; as St. Augustine likewise complaines, in those of St. Cyprian: so possibly, those of the other Fathers may have beene corrupted too. But this Excuse, which my Charity hath suggested to me, hinders not, but that we are to reject Their workes, such as now we have them, if we are not to read any of those, that have erred.

PART.

PART II.

Of the Talismanicall Sculpture of the Persians: or, the manner of making Figures, and Images, under certaine Constellations.

CHAP. III.

That the Persians are unjustly blamed, concerning the Curiosities of their Magick, Sculpture, and Astrology.

THE CONTENTS.

He Evill Custome, of blaming the Ancients, is noted.

2. The Reasons brought against the Persians, and their Magick, examined, and found of no force. The Errors of the Counterfeit Berosus, Dinon, Comestor, Genebrard, Pierius, and Venetus, concerning Zoroaster.

3. His Magick, what it was.

4. The strange Statues of Laban, and Micah, called • Teraphim, perhaps allowed by God.

5. The Errors of Elias Levita, Aben-Esra, R. Eliezer, R. D. Chimchi, Cajetan, Sainctes, Vatablus, Clarius, Mercerus, Marinus, and Mr. Selden, concerning these Teraphim. The grosse conceit of Philo Judæus, touching this Particular.

6. A Conjecture, touching these Statues, what they were: and an Answer to what may be

objected against it.

7. Of certaine strange, Prodigious things, which have foretold Disasters, which have beene seen to come to passe; and which doe yet forceell the same.

8. The Conclusion of all before delivered.

Here is nothing in the whole businesse of Learning, which astonishes mee more, then to see, how many of the most

Excellent Wits of this our Age, make it their businesse, to find fault with the Ancients, and to load them with injurious speeches: as if this evill custom had now grown into a Maxime with them, that one can never passe for an Able man, nor appeare to be Any Body, without

us

without reprehending those which have gone before us, and from whose Learned writings we have derived the most Curious, and Choyse Points of Knowledge that we have. The Persians, or, if you please, the Babylonians, that bordered upon the River Euphrates, were the First, as Rabbins report, that found our the secret power of Figures. The wonders that have been effected by them, have heen acknowledged by all the Ancients, and approved of throughout all Ægypt: in 6 much that, those, who were the first that have written of them, have maintained, that there was not any thing of more Excellency, and Admiration, within the compasse of the whole Universe: These first Writers have been seconded by all those that have come afterthem; even down to Our owne Daics, and the Daies of our Fathers; wherein we have at length feen this Secret condemned, and the Persians accused of Sorcery: so that, to the end I may free from suspicion, what loever I shall borrow from Them, it will concern me to shew Their Innocence here, as I have already done for the Fewes their Neighbours: and shall ground my Defence of them, upon what I have found written, in the Preface of a certaine Persian Astrologer, translated into Hebrew by Kabbi Chomer, a Modern Author : and I shall adde to his Reasons, what other

Unheard-of Curiosities.

other I shall be able to find, among the Writings of both Greeks, and Latines, to render them the more powerfull.

2. The Curiofities therefore of the Persians, that is to fay, their Figures, and Magicke, are usually condemned, for foure Reasons. The first is, because they are said to have been derived from the most Wicked person, next to Cain, that ever was; that is, from Cham, otherwise called Zoroaster. The second is. because the Learned men of this Nation acknowledged no other Deity, save that of the Heavens, and the Stars, and, by consequence, their Doctrine must therefore necessarily be very Dangerous. The third is that they teach the worshipping of Spirits, or Divels, that convey themselves into Statues. The fourth is, that they made certain Figures, and Images, from whence they received Benefits of all forts, by the use of Witchcrafts, and Inchantments.

To the First of These, HamahalZel, the Author of the Astrology above-named, anfwers in one word, and faies; that the constant and unanimous Tradition in Persia, is, that Zoroaster was so Good a Man, that the most Religious fort of people of that Country are daily conversant in the reading of a Pious Tract, that is said to have been of his Composing the Title whereof is, Memlecheti Ha-

laal,

64:

30. 2.

laal, that is to fay, The Kingdome of God. But fuppose, he was not the Author of this Book; Fid. Bof- it is very false however, saith R. Chomer, that bift. Gra. he was Cham, the sonne of Noah: and it is very Probable, which he fayes; for if we inquire but after the Originall of this Fable, we shall find it to have had no other Author, but even the Counterfeit Berosus, that Annius hath foisted in upon the world. And that this is not the True Berosus, and therefore not to be believed, besides many other reasons that are brought to confirme it, this following is now of the worst; namely, that he makes Mention as well of the Libyans, Almans, and Italians, contr. Ap- as of the Chaldeans, or Babylonians: whereas pion. Apo- the True Berofus delivers the history only of log. 19. these Last, in three bookes; as you may observe out of Fosephus, Tertullian, Clemens A-Lib.19. lexandrinus, and Vitruvius. In a word, for Lib.7.6. a fuller satisfaction, that this is not that Berosus, to whom, Ob divinas pradictiones, lath Lib. 1. Pliny, Athenienses publice in Gymnasio, statuam scholast. the Consure that Gaspar Vazerius hath given of Gen. 39. This Bookc. This Forgery of Annius hath mid car. also lead Genebrard, and Comestor, into the i.tom.i.c. same errour, of believing Zoroaster to be the 8. Hiero-gl.49. foi fame, that Cham. Georgius Venetus likewise, and Pierius wrong themselves very much, in maintaining that he was no other, then the lon 16. G

of Cham, and Grand-sonne to Noah, and the same that is called in the holy Scriptures, Mifraim. And indeed if it were so, how comes it to passe, that Pliny, speaking so often of him, makes no mention of it at all? Hee saies indeed, that the same day he came into the world, he laughed, and that his Braines beate so strongly, that if any laid their hand upon his head, this motion struck it back againe at the same instant: which was, saith he, a sign, that he would be a very Knowing man. But that he was either Cham, or the sonne of Cham, is more then Pliny had ever met with ! and with him concurre in opinion, the two fustins, St. Augustine, Epiphanius, and in a manner all the Fathers; that have made any mention of him. But suppose him, may some one say, to have been neither Cham, nor the sonne of Cham; yet it cannot be denied, but that hee was a Magician, and a Sorcerer. If Naudaus had not already Learnedly answered this Objection, I should in this place have examined it: but I shall now defire the Reader to see the Reasons he hath set downe, in his ca. 8, Learned and exquisite Apology; which may hereafter serve for a Pattern to all Demonographers. I confesse, that Wise Persian addicled himselfe to the Contemplation of the Starres; but worship them he did not; although Dinon, in Diogenes Laertius, endea-

Unheard-of Curiosities.

vours to prove it, after a ridiculous manner. Dinon, suith he, in quinto Historiarum libro, Zoroastrem, ex interpretatione nominis sui, Astrorum asserit fuise cultorem. I have turned over the Persian Dictionary, withall possible diligence; and yet could not meet, neither with this word, nor any like it, that can fignifie that which Dinon would have. Peradventure hee derived this Etymology partly from the Greeke, and partly from the Latine: but, who can hold laughing a it :

3. To the second Reason Hamahalzel anfwers, that the Persians were so far from worshipping the Heavens, and the Starres; that, on the contrary, they taught all men to acknowledge One God, by observing the just Motion of the Heavens, and the Starres: and, that if he were at all acknowledged by any of the Ancient Philosophers, it was, for the very fame reason: as you may learne ou of Manilius, Diogenes Laertius, Rosellus, and Picus Mirandula. Heurnius addes, that this their Observing of the Starres was so Holy, In Trif- that the First that addicted themeselves unto it, were therefore call'd, Magi, that is to say, Wife men: from whence the word, Magickesis also descended; which signifies only, a Perfett Knowledge of the Workes of God, and their Effeets; which appeare more visibly in these Celestiall

derstood, (sayes Scaliger,) that One, that was God, was to become man. Hac Magia, comm faith he, Dominum Fesum fuisse promissum Regem cognoverunt Magi, qui ad eum adorandum longissimis è regionibus profecti sunt. And that wee may not omit any thing, if this Magicke, by which men came to a full knowledge of the Heavens, and the Starres, were fo black and damnable a piece of Knowledge, as it is given out to be; why then did none of the Ancient Philophers ever condemne it? or rather, why did they take fuch long Journeys upon them, for the attaining to this Knowledge ? It will be answered peradventure, that wee are as desirous to learne that which is evill, as that which is Good: Well, but all men of Lear. ning have ever affirmed, that this Magicke was the Fountaine of all Good Doctrine. Animadverto (faith Pliny,) [ummam Literarum claritatem, gloriamý, , ex hac scientiá antiquitus, & penès semper petitam. What can be more expressely said, in the desence of its Innocency : As likewife, what he prelently addes; and which is knowne even to children: Pythagoras, Empedocles, Democritus, Plato, ad hanc discendam navigavêre; exilijs veriùs, quàm perigrinationibus. susceptis. Hanc reversi pradicavere, hanc in Arcanis

Lib. I. Florid. Arcanis habuêre. And, to conclude, fince all Antiquity commends the Affection of these Magi, which followed the strange star, why then should their Doctrine be condemned? Why did they not, out of their zeale, In Dan. fall downe and worship this Starre, which e. 11. appeared more Bright, and Wonderfull Hist Eccl. then any of the rest? but rather, on the concomment trary, onely followed it, as knowing well, in Diothat it was the Messenger of him, whom mys. de situ they afterwards worshipped in a Stables orbin, Lib. You may see this Truth, proved at large, 30.csb. you may see this Truth, proved at large, 11.Lib.21. thias, Pliny, Ammianus Marcellinus, Casalescotte. bon, Brissonius, Duret, and Bullinger.

Num. 2. Deregn. Perf. 1.2. En l'hist. des Lang. c. 49. Eclog. c. 7.

4. The third reason is resuted, saith HamahalZel, in saying no more but this, that our adversaries cannot name one Persian Astrologer, that ever worshipped a Statue. They had indeed, saith he, certain Wonderfull Images, or Statues: but since they were such, as were allowed by the Agyptian Lawmaker, (he meanes Moses,) why might they not make use of them? Now that they were sud. 17. allowed of, appears by that of Micah, and his mother, who allotted two hundred pieces of silver to make one of: Qua wilt, (saith the story,) ducentos argenteos, & delite.

dedit eos Argentario, ut faceret ex eis sculpti- Confele, & conflatile; & fecit Ephod, & Tera-voviboc phim. Neither do we finde, that they were argenreproved by God for this; no more then turn, Laban was, for doing the like : but rather Laicheon the contrary, Nunc scio, quod benefaciet va, Demihi Deus, (faith Micah,) after that he had mino. 16. gotten him a Levite to be his Priest, and to have the charge of these Teraphim, or Statues: which are often called by the name of God; either because they were consecrated unto him: or else, because there appeared in them the Wonderfull Effects of some Particular Residence of some Power, which served instead of Oracles. Quia dies multos, (faith Holea,) Sedebunt filij Israel, sine Rege, Ofe. 3. & sine Principe, & sine sacrificio, & sine Altari, & sine Ephod, & sine Teraphim: that is, as if he had faid: neither Ephod, nor Teraphim, shall give any answere.

5. And here we are to take notice of the Errors of diverse Authors, concerning these Teraphim, and first, of Elias Levita; who InThistreports, that they were made after this man-bi. ner. They killed a man, that was the first borne, and wrung off his Head; and having imbaulmed it, they placed it upon a plate of gold, on which was first written the name of the unclean Spirit, that they would call upon: and so, hanging it up against a wall,

a ar

and placing Lampes, and Torches about it, they worshipped it. A very subtle Invention, this; but something a dismall one! And who can imagine the People of God In Gen. ever guilty of it? The conceit of Aben-Efrais altogether as false, though not so scandalous: for He sayes, that the Seraphim were certaine instruments made of Brasse, like Sundials; by which they knew the particular Houre, and minute, that they were to practife their divination in. Rabbi ElieZer, surnamed יודין, Gadol, that is to fay, the Great, in his book intituled, פיקי אליאוד, Pirche Impr. ElieZer, i. e. Capitula R. ElieZer: is of opini-Ven.an. 1544. on, that they were certaine Statues, made in torme of a man, under certaine Constellations; whose influences, (which they were capable of receiving,) caused them to speake at some certaine houres, and give an answere to what soever was demanded of them. And the reason, saith he, why Rachel stole away her father Labans Images, was; for feare that Laban, having recourse to them, might learne which way facob, with his Family, had taken. Some Writers have affirmed, de Gest. that the use of these Images hath beene sometimes practifed, by one of the most pious Reg.. Augl. Doctors, and most learned Bishops of our Church: Bur these are Fooleries. R. David Chimchi is also deceived, when he saies;

that these Teraphim were certaine Images, (whose figure is yet unknown,) by which the ancients were instructed concerning Future Events: being, as it were, like those Oracles, which oftentimes spake by the mouth of the Devill. This false opinion of his is taken up by Cardinal Caietan, Sanetes, Vatablus, Clarius, Selden, and Marinus, inhis Arca Noa. Mercerus also goes along with the Streame of Interpreters, and In Thesayes, that these Images were, as the House- saur Heb. hold Gods of the Ancients : Ut Penates, faith he, & Lares sampserim. Philo Fudaus is yet farther out of the way, then all the rest: for the account he gives of them is so Grosse a one, as that any, the most simple Old women would be able to judge it fit to be accounted Fabulous. For, speaking of the Story mentioned in the 17.0f Judges, he fayes: that Micah made, of fine Gold, and Silver, three Images of young Lads, and three Calves, and one Lion, one Dragon, and one Dove: So that if any one had a minde to know any fecret concerning his Wife, he was to have recourse to the Image of the Dove, which answered his demands: if concerning his children, he went to the Boyes: if concerning Riches, to the Eagle: if concerning power and strength, to the Lion: if it any thing concerned sonnes, or daughters,

Daughters, he went then to the Calves : and if it were about Length of Yeares, and Daies, he was to confult the Image of the Dragon. A very pretty Fiction, in truth But leaving these people to their owne lgnorance, and Errors, we say, with St. Fe-In I.Reg. rome, an Author more worthy of credit, in matters of the Old Testament, then any Interpreter what ever, either Greek, or Latine, that these Teraphim, were sacred Images belonging to the Priest. Teraphin, (faith he, with Aquila,) proprie appellantu μορφώματα; id est, figura & simulachra, qua nos possumus, in prasenti duntaxat loco, Cherubim & Seraphim, sive alia, que in Templi orna menta fieri jussa sunt, dicerc. This Opinion of his is so sound, and so true a one; that hee must be no Kationall man, that preferres it not before any other. You have it also againe, expressed in other tearmes, in his Epistle ad Marcellam. In Teraphim, Ep. 130. (faith this Learned Father) wel figuris, waria opera, que Teraphim vocantur, intelliguntur, &c. Juxta igitur hunc sensum & Micha, cum veste Sacerdotali, catera quoque, qua ad Sacerdotalia pertinent ornamenta, per Teraphim fecisse monstratur.

6. Now seeing that the Images of seraphims, or Cherubins, are by a Generall name called Teraphim; who can accuse the

Eastern

Eastren people of Sorcery, for using them, any more then Laban, who did the like Certainly the Holy Scriptures, which reprove to sharply all manner of Vice, (as we have already faid,) never reproves Him at all for doing it: neither is it at all credible, that Facob would have served an Idolater so long a time, and at length marry his Daughters too. It may be also probably conjectured, that David made use of these Images; seeing that it is storied, that his Wife Michal Tulit Teraphim, & posuit eum super Lectum; using this subtle Devile, to secure her Husbands life. If so be that Michal her selfe onely made use of it, though an unlawfull thing; Why did David then fuffer it? Or why was it not at all reproved by God? If it be objected, that Facob commanded all his Houshold, to put away all the strange Gods; Abijcite (faith he) Deos alienos: and that He himself also hid them in a pit, covering them with Earth, under a Turpentine tree: I answer, that there is nothing more cleare, then that he there speaks of the Houshold Gods of Gold and Silver, which his Sons took from the Sichemites, as a rich booty, when they spoiled and ransacked their City, for having ravished their Sister : Omnia Vastantes, qua Gen. 34. in domibus, & in agro erant. And that this

is so, appeares by this; that though this bleffed Patriarch had beene so long a time sojourning in this Country; yet he never made any mention at all of False Gods, till the time of this Pillaging of the Canaanites, who were a People given to all manner of Idolatry: which was the reason, (say the most Learned of the Rabbins,) that Abraham made his Servant sweare unto him, notto take a Wife for his Sonne Isaack out of This People: Adjuro te (faith he) pu Dominum Cæli & Terra, ut non accipia Uxorem filio meo de filiabus Chananaorum: because he knew that they were Idolaters. The same Charge did Isaack give his Son Facob. HamahalZel therefore concludes with this Truth; that certainly, in the time of these Patriarchs, there were some certains wonderfull Images, or Statues, by which God made known his Will to his People. Those that shall have the happinesse to see the Tract, which Moncaus faies, he hath written of this Subject; will be ready to confelle, that they are not Dreames, which are here delivered by this Persian Author of ours. If it be demanded; why then did not Moles make a particular description of thele Images ? I answer, that this Wife Law-giver, knowing how extreamly inclined to Idolatry, the People, which he con-

ducted,

ducted, was; makes no other mention of them, fave only in passage: being unwilling to forget them wholy, lest any thing of the History should have been lest out.

7. I doe the more boldly propose this Doctrine, after this Persian Writer, because I see, that in all Ages, God hath made known his Wonders, and what ever Accident of Importance was to happen, throughout the Universe, by some Sensible thing; and will yet doe the same hereafter, when he shall come to judge the Quick and the Dead; giving a Signe of his Comming, by the Falling of the Stars, and the Darkening of the Sun and Moon, and by a Deep Aftonishment cast upon all Mortals. If you please but to look back upon all Ages past, you shall not find any one, (where according to this Truth) some new Prodigie did not foreshew the Good, or the Evill Accidents, that were to come. Thus we fee, that a little before the time that Xerxes covered the Earth, with his Million of men, there appeared horrible and dreadfull Meteors, as Presages of the Evils that afterward happened: as there did likewise in the time of Attila, who was called Flagellum Dei. And, to goe higher, was not poore Ferusalem forewarned of her Approaching Milerie, which made her the most wretched

ot

of all Cities, by many the like Prodigies? For there was often feen, in the Aire, Ar mies of men in battell array, seeming told ready to charge each other: and one day, at the Feast of Pentecost, the High Pries entring into the Temple, to offer the Uli all Sacrifices, which God regarded now mo more; there was heard a Suddaine Noile, and a Voice immediately following it, which faid: נעבור מוה Naavour Mizeh, Let us depan bence. I shall not speake of the Brazen Gate which opened of it selfe, without be ing touched by any body: and all the other Prodigies, which are spoken of by Fosephus. Appian hath reckoned up, what miraculous things were feen, and heard, before the break ing out of the Civill Wars; as namely, Fearfull Voices; and, strange running up and downe of Horses, which no body could see Pliny hath likewise set down those, that were heard in the same manner, before the Cymbrian War; and among the rest, divers Voices that were heard from Heaven, and dreadfull Alarmes, sounded by certaine terrible Trumpets. Before the Lacedemonians were overthrowne, at the Battell of Len-Etra, the Armes, in the Temple were heard to make a noise of their owne accord: and about the same time, at Thebes, the Gates of the Temple of Hercules opened of themselves,

selves, without any man touching them; and the Armes that hung against the wall, were found cast on the ground (as Cicero re- Lib. de ports the story) not without the great Astonishment of the beholders. At the time that MaxLi. Militades went against the Persians, diverse 6.6.Cas. strange sights foreshewed, what the Event ciu. Fal. would be : and , that I may trouble my selfe Malleol. in reckoning up these Wonders no longer, de Nob. you may have recourse to Livy; who, for Pencer. having beene so copious in his stories of this depracipnature, is thought fit, by some Authors, to be Gen. stiled, a Tragedian, rather then an Historian. Cypr.Len-If we come downe to the Ages, not so far re- viting de moved from our Owne; we shall find, that in mag. Lathe Reigne of Theodosius, there appeared a vater. de Starre shooting forth beames in the shape of a speak. fword: and in the time of Sultan Selim, an in- 16. & finite number of Croffes appeared, shining in 17. the Aire; which foreshewed the Losse he afterward received by the Christians. And who knowes not, that the Emperour Pertinax was forewarned of his death, three dayes before, by a certaine Vision that he saw in a pond, that seemed to threaten him with a drawne Sword in his hand? That certaine Spirits foretold the death of Constans fonne to CONSTANTINE the Great! That Alexander 3. King of the Scots, was likewise advertised of his, by a Spectre, that

danced publiquely with him in a Maske! The another sad, ghastly, leane, disfigured Ghos foretold Fulian the Apostate, and the Em perour Tacitus, Theirs: That the Emperou Henry II I. was forewarned of his, by a Vill on, in the shape of a Horseman, who seemed to make his Horse bound, and curvet; and a so by two other, that fought a Duel in the Base Court of a Palace in Millaine? The like to these, you may see described by Virgil Georgie, l. 1.

Armorum sonitum toto Germania calo Audit, insolitis tremuerunt motibus Alpes. Vox quoque per lucos vulgo exaudita sileme Ingens; et simulachra, modis pallentia miru, Visa sub obscurum noctis : pecudesque locuie

And without borrowing Examples abroad, Cardan assures us; that in the City Parma; there is a certain Noble Family, out of which when any one is to dye, there is alwaies an Old, strange, unknown Woman seen, sitting in the Hall, in the Chimney corner; and this fo certainly, that it never failes. And even in Our Dais, there is to be seen at Avila, a Wonderfull Bell, that, when any disaster is to beral Christendome, sometime before it happens, is heard to found, without any body touching it. The Authors which affirme, that they

have knowne this of their owne Experience. are of fuch Integrity, as that we cannot but believe them? and This Miracle was seene by Ten Thousand, a little before the Overthrow given to the Granatins. But what shall we By to this Prodigious thing, which the Executioners of Justice upon Malefactors (whom wee cannot name, without horror) find to be true too often: namely, that when any Malector is to be delivered into their hands, the Sword, or Fauchion, that they are wont to use in this businesse, removes it selfe, no man comming fo much as neare it; as it is at large discoursed of, by Lavaterus, in his book de Spectris, and Natalis Taillepied, in his Part 1. Treatise De l' Apparition des Esprits? Wee cap. 17. may here adde that direfull Massacre of the Huguenots, on St. Bartholomew's day; which was foretold by the White-Thorne, that blofsomed the night before. Besides, it is observed, that if, on Michaelmas day, which is the 29. of September, there be found a certain little Wormein the Oake-apple; the yeare will then certainely be very pleasant, and seasonable: is there be found a Spider, it will be a barren yeare, and there will be great scarsity of all things: if a Fly, it is a figne of a moderate season: if there be nothing at all found in it, it is a figue that very fore diseases shall reigne all that yeare. Sometimes also God lets

Unheard-of Curiosities.

lets us know, what shall come to passe; by some inward signe, either in Sleeping, or Wa Locaitat king. So Camerarius affirmes, that some people have an Apprehension, and knowledg of the Death of their Friends; and Kindred either before, or after they are dead, by a certaine strange, and unusuall Restlesnesse within themselves, though they be a Thousand Leagues off. My mother, Lucrece de Ber mond; when shee was living, had some such figne alwaies given her: for there never dyel any of our Kindred, but, a little before, she dreamt either of Haire, or of Egges; or of Teeth, all mingled together with Earth; and this figne was an infallible one : and I my felfe, when I had heard her say she had any fuch Dreame, observed the Event alwayes to follow.

8. My purpose is not to make this Volume fwell, by reckoning up all these examples: one only of them would have been sufficient; to the Learned, to have confirmed the Truth of what I have delivered: and in adding more I doe it but the more powerfully to enforce the Induction, upon the spirits of those Obftinate Men, that will hardly be induced to foreage much benefit. But, that it was either the beliefe of the truth of this my Affertion! Ishall therefore draw this Conclusion, from there is no man will ever be able to prove. all that which I before delivered; that, seeing, These are his very words, translated: So that God hath formerly Miraculously force thewed,

shewed, and doth still, at this very day, foreshew, by diverse signes, and in very many things; what Events shall follow: he may then as well have shewed it heretofore, by One only, Particular Meanes: fuch, peradventure, as was that of Laban's Images, which wee may probably guesse, to have been the Teraphim, spoken of by Hosea. And then, if the Ancient Persians, as Zoroaster, having Loc.citati kept themselves to the use of one kind only of these Figures; following the Example of the First Fathers, who inhabited their Country; are they presently to be condemned, as Magicians: This is all one, as if we should accuse. of Sorcery all those, that, by the sounding of the Bell at Avila, or any other the like Prodigy, conclude that fome Calamity is to fol-

The Last Reason, for which the Persian Magicians are condemned, is thus answered by HamahalZel. I deny not (faith he) but that our Ancient Astrologers did make certain 1mages, under such and such Constellations, both of Gold, Silver, Wood, Waxe, Earth, and Stone; from the use of which, they did alby way of Enchantments, or Witch-craft; that it now remaines, that wee set downe,

how, or in what manner, the Vertue of these Images could be Naturall: which I shall endeavour to doe, after I have sing shewed, how our Moderne Philosophen have erred, in this Particular.

CHAP. IV.

That for want of understanding Aristotle aright, men have condemned the Powe of Figures; and concluded very many things, both against this Philosopher, and against all sound Philosophy.

THE CONTENTS.

1. Rrors in Learning, caused by the Igmrance of the Languages.

2. Eldos signifies Specimen, and not Species.

3. The reading of airds airds and, provid to be false.

4. Toeshker, ill translated; and hence the Question of Universals, not understood.

The improper translating of xœcs d.
 The Errors committed in these words, λόγΦ ἐσίας, & τὸ τὶ δι εἶναι, & æṣἀπειν, œοιῶι The correcting of ἐντελέχεια rejected, again Ciccro.

7. It is falsly concluded out of Aristode, that Fire is moist, against du Villon.

8. That Aristotle is abused by Interpreters, by reason of their not understanding the force of the word Sies; and by reading Scor, in-stead of Scor.

9. The false Interpretation of the word

raivor, given by Stapulensis.

10. The word woldths, rightly understood, condemneth those that deny the power of Figures. The proofe of This at larg e.

He Ignorance of the Languages hath been the Occasion of so many Errors, not only in Learning, but even in Religion too; that it is not

without cause, that Learned men complaine hereof. For what can be imagined more ridiculous, then for a man, not knowing the force of the word Pachaiah, which fignises no more but the Aire, or the Extent

of any thing,) to fancy a Christalline Heaven:
What Grosser Conceit can there be, then, for want of understanding the Equivocall meaning of the word there we heaven, which signifies both a Harne, and Light, or Heavens.

From this passage: Divisic aquas que subter Firmamentum, ab ijs que super Firmamensum sunt, et aque comes que super Cælos suut: it hath been concluded, either that there were waters above the Heavens, or else that there were certaine Christalline Heavens.

r 2

Bright-

Brightnesse, to paint Moses with Hornes: which hath beene the cause of great after nishment, among many Christians, and of Laughter to the Jewes, and Arabians! But my purpose here, is not to shew, what Abuses are crept into our Religion, meerly for want of the knowledge of the Hebrew, or the Holy Tongue, as we usually call it: I have discoursed at large elsewhere upon this Particular; and those that desire more full fatisfaction herein, may have recourse to my Book intitled, Advis aux De-Etes, touchant la necessité des langues Orientales. I shall only at present shew some of those severall Errors, with which our Books are full, only for want of understanding the Text of Aristotle aright.

2. And of these I have heretofore observed above a Thousand: but, because I would avoid Tediouinesse, I shall bring in only some few; and that, only to make it appeare, that Figures are condemned without cause: and that many Conclusions are deduced, which Sound Argumentation could not beare. Thus, to begin our Enumeranon,) all Interpreters have rendred the Greek word fishes, Species; whereas it ought tobe rendered Specimen. For it cannot be denied, but that Isia fignifies the Species, or Samples, and fisher, the Copy, or Extract: unlesse we should |

should give Plato thelye, who alwayes takes ING in this sense; as if we should interpret ir, in our Language, The Copy of the Great

Patterne, or Sampler.

3. Next, it is a manner of speaking, very frequent with Plato, that when he speaks of the Idea of a Man, or of a Horse, he saies, யர்வு விருவரை அவர் விருவாக : which almost all Interpreters have corrected, though very fallly, and read autos an Sour . Gc. For the Idea Of a Man is properly called αὐτῷ αὐβρωπ 🕒; on the contrary, every particular man may be called aurds and pom : as in Latine, every Particular man may be called, Ipfe homo; but when we would expresse the Idea, we cannot doe it, but in these Termes, Ipsi Homo, ipsi Equus, ipsi Cælum, &c. If I wrote to all forts of men indifferently, I should explaine my felfe more fully in this particular: but seeing I write not, but to the Learned only; I may prefume of their understanding me sufficiently, in two words.

4. Another Error, that is committed int the Interpreting of Aristotle, is in the word upismue, the sense whereof is usually expressed thus: Utrum Universalia cadant in rerum naturam? Namely, Whether there be any Universals in the World, or not? whereas they should rather say, Utrum realiter subsistant? or else; Utrum sint realia? that is to say,

whether

In Ifag. Porph.

Utrum

Vniver-

fccun-

whether they have an existence reall, and of themselves; or not. There being no fmall difference betwixt these two Propositions; Utrum universalia existant? and Vtrum subsistant per le? which was the Opinion of *Plato*. And upon the fame subject, there is likewise another Error committed in these words: "ite en movais Lidais amvoiais: which is falia in rendered whether Universals have their being nuditian- onely in Little thoughts. Whereas in sound timcon-ceptioni- Philosophy, and according to the Text, it bustofied should have been proposed in these words: Jints whether Universals exist only by the Reflection of the understanding? Which is said to be, a dım in-Fine, Small Thought: and so the question tentiona- is, An sint realiter, aut per Intellectum! fer folson And we are to note, that Vinais composais, is vecogitatio ry properly rendred, Small Thoughts; or nëmenis? Conceptions; because the second Thoughts are Lesler, and Finer then the First.

Unheard-of Curiosities.

5. Interpreters have likewise rendered the Greek word weist, Avulsa, et distracta: as if we were not to feek after the Propriety of language in all things; and discoursing of a Philosophicall point, were not to handle it in Philosophicall Termes. Who can then imagine otherwise, but that this Greek word appea, should be rendered in Latine, Abstracta; and that so much the more happily too, in that it is a Terme so frequent both among

Philo

Philosophers, and Divines : Adde to the Former, this other Error also; that the Common fort of Philosophers say, that, Accidens dicitur in Quale: whereas Porphyrius affirmes, that it is not onely spoken in Marcio. Quale, but in mas exu, Qomodo se res habet. Certainly it would thew very strangely, if when it is demanded, Qualis est Imperator: What manner of man is the Emperor : it should be answered; Bene se habet: He is in very good health. Neither is there any Language in the world, that can beare this construction.

6. Againe, where Aristotle, in the beginning of his Predicaments, and elsewhere, layes, Noy & soias, the Interpreters generally render it, though extreamly ill, Ratio substantia : for, ida signifies, Essentia; so that they ought to have faid, Ratio Essentia, that is, The reason of the Essence, or, The Definition; which is the true, and onely Reason of every thing; and the Learned know, that the substance onely of any thing is not defi-This Excellent ned, but the Essence of it. Philosopher hath another manner of Phrase, which we frequently meet with, in his writings, which is, to ti in first, which is alwayes translated, Quod quid erat effe; but so Obscurely, that, besides that it is no very good Latine, it is a translation that was never-

G 4

yet understood by any man. It is therefore an intollerable Overfight, that is here committed in the Greek Text, in not taking this Verbe of the infinitive Mood, (especially where the Article is expressely added to it,) for a Noune substantive. So that I appeal to all Learned men, whether these Greek words ought not rather to be rendered thus: Quid est Essentia? for n'e irai, is as much as, Essentia; and ring, Quidest? And although that w, fignifies erat; this manner of speaking is notwithstanding very Elegant, to use the Preterimperfect Tense, for the Present: in like manner, as in French we may use the Infinitive Mood, with an Article, instead of a substantive, thus : Ce que est l'Estre de la chose: That which is the Essence of the Thing. It is also a very confiderable Error which is comitted in these two words, or differ, & which are used by the Philosopher in the fixt of his Moralls; for, almost all our Moderne Philosophers confound them: and because that each of them may signific both Agere, and Facere, this Conclusion is drawn tromthence, namely, Artes esse Practicas: Notwithstanding that Aristotle teacheth us expressely, that made is used onely, in discoursing of Morall Actions, of Vertues, or Vices. In the same chapter, you may observe also another Error our Philosophers phers are fallen into; who thinke, that meting fignifies onely, an Exterior, sensible Work: whereas Aristotle himselfe sayes, that, motern is onely to do some Worke, that hath an Externall End. Neither is this Error lesse remarkeable, that whereas he sayes 2. de Anim. Anima, that the soule is interest are corrected it, and read indexina; that is as much as to say, that the soule is, A Continual motion: which is False. For the Soule is not this Continual motion, but onely, The Perfection from whence this Motion proceeds: and this is the meaning of the Word, interest as

7. And now of late, another new Error, as great as any of the rest, is sprung up, from the mifunderstanding of another Text of Aristotle; and it is grounded on the Word 4. Met. Eubeisor. For whereas Aristotle, in the Cap. c.4. 4. lib. 4. Meteor, fayes, Humidum facillime alieno termino terminari, or is, Eubeuson: there are some, that conclude from hence, that Fire is moist, because it is Easily bounded by another Thing. The discourse intitled, Les Theses Curienses, published some yeares fince by one that was a fouldier of Provence in France, and besides, an Excellent Philosopher, hath sufficiently confuted this Position. We say therefore only here, that which is most true; namely, that where Aristotle useth

Lib 6. . Moral. 90

useth the word, Euberson, which Interpreters render, Perfacile; it should be translated, Naturaliter. Now that Fire cannot Naturally be Terminated by Another thing, is most certainly proved by the experience of Canons, and other Fire-Engines: for the Fire being shut up, or Terminated by them, either breaks them in pieces, or is broken it selfe. So true it is, that one onely word, mil-understood, is oftentimes the cause of the deducing of most Absurd Consequences.

8. Let us now returne backe againe to his Mor. c.4. Morals, where, as in divers other places, we et 1/200. meet with the word, 3005, which is usually tranfractia. flated, Deus, or Dij : doing hereby no small Injury to Aristotle, in making him seem guilty of Admitting a Composition in God. But, what man of sense is there, that sees not; that, according to the meaning of this Knowing Genius of Nature, the word 3001, should be rendered, Angeli, or Spiritus; or else, Mentes, or Intelligentia? And this is plain, becanse that in his Physic. lib. 1. and else-where, hee expressely saies; that the nature of God admits not of any Composition: but that Angels indeed are compounded of a Spirit, and a Coelestiall Body; according to the Opinion of the Platonists: or rather, as the Peripateticks will have it, Ex genere, & differentia: which is most true. Now whereas he saies,

in the Chapter de Differentia, that sees is compounded of Parts; and, that he is in the Predicament of Substance; I leave it to any man to judge, whether, or no, he speaks not there expressely of the Angels. Out of this Errour, have sprung two other; which gave occassion to the Ancient Christians, to condemne this Philosopher; faying first, that hee affirmed, that God was, Animal: But they mistooke the place in Aristotle; and instead of reading Zar, that is to fay, Vivens, they read (wov, Animal. The First of these two Appellations is most proper to God; but the other is so farre from the Truth, that it never entered so much as into the Thought of this Excellent Philosopher; who utterly denied, that there was any Composition in God (as wee have already fayd:) especially, that of Animal; as you may see in the First of his Poli- Polit. 1. tickes; where he disdains all those, that attribute to God, the Form of a Man. The Other Error proceeds, from their not understanding the Force of the Greek word used by Aristotle, when they say, that Aristotle conceived, that he had demonstrated the World to have been from all Eternity; which is very far from the Truth. For he affirmes, that Lib. 1. to make a Proposition to be Demonstrative, cap. 4. it is necessary that it be known during that is to say, perse, of it selfe. Now, in his Metaphysicks,

and in the Eighth book of his *Physicks*, he demonstrates, that, *Existence of it selfe*, is onely proper to God. Judge you then, what must be the Consequence from hence. Besides, if any man but examine the Writings of this Philosopher throughout, and his manner of using this Terme, perse; he will find, that the Worlds Existence is not a Proposition parse.

Je.

9. I shall adde, to these Observations, only one more, which is, that where Aristotle in tic. c. 2. his Politicks saies, that in Ancient times they were wont to give Warriers so many Lilyes, as they had obtained Victories, Stapulensis, to the great Disparagement of the Antiquity of the Armes of France, instead of Kpsww, Lilyes, corrects the Text, and reads Kpsww, Rings, Contra (as he saies himselfe) antiquam interpretationem. But seeing that Kpsww was the Old Word, by his owne confession, let any man judge, whether this Capriccio of his beto be endured, or not.

Let us now see whether the Judgment of the world hath been more upright in this Particular Point we now treat of; and whether our Modern Philosophers have had any good ground for their endeavouring to overthrow the power of Figures, which all the Ancients

allowed them, or not.

They therefore first of all urge this Max-

ime, which is indeed generally received by all Learned men; namely that, Quantitas per se non agit: Quantity, of it selfe, is a Dead Thing, and Workes not at all. Thus a stone takes no care to move it felfe; unlesse some body else move it: Otherwise Aristotle had not fled to his Intelligences, to give motion to the Heavens. We confesse therefore, that Quantity of it selfe, Operates not at all: but, to proceed in the fyllogisme, and conclude, that, Figure is Quantity; is such a thing, as Philosophy will never endure. I must therefore necessarily lay downe this Position. (without troubling my selfe to prove it,) that Figure is a Quality, and not Quantity: and this being presupposed, I shall examine, whether it hath any Power to Operate at all, or

The Conclusion which I shall here lay downe, and on which the whole discourse, contained in the two next Chapters shall move, is this: That Figures, of themselves, Operate not at all: but being applyed, or if they be Modificative, (as the School speaks,) they may doe something. And this is the sense of Aristotle, which none of his Interpreters hath hitherto hadthe good Fortune to apprehend. Let us see what himselfe saies, and what his manner of speaking is, on this Particular.

10. There is nothing that more powerful-

ly,

94

Calor. Qualitas > ut & Passio:)

Potentia C Risibilitas. naturalis, & Sut & Debilitas ad riden-Impotentia: 5 dum.

Why should Men go about to deprive Figure, of this Propriety, and make it lesse Able and Apt to operate, then the other Kinds of Quality are: And what reason can there then begiven, why it should be called, misting: that is to fay, that it is, Effectrix? In earnest, I cannot fee what other reason can be given. Besides, it is most certaine, that a square piece of Wood, is not so Apt for Motion, as a Round: and a Blunt piece of Iron will not pierce so easily, as a Sharp one will doe. It is the Figure therefore, that makes the one of these Apt to rowle about, and the other to penetrate: and if the share of a Plough were made round, in form of a bowle, it would never enter the ground. A thousand other Instances might be brought, out of the Mechanicks.

CHAP.

ly confutes those, that maintain, that these Fi. gures are of no force at all, then the Greeke Text it selfe, (if but rightly understood,) where this Philosopher speaks of Quality: for, he calls it wolfernla, that is to fay, Facultatem, seu facilitatem faciendi: the word comming from motion, which fignifies, Facere, to doe, And Aristotle himselfe saies, that, moions, renders us, notice; that is to fay, Apt to doe, or effect fomething or, as the Learned interpret it, Ativos, & Effectivos: for which reason, Poets are also called minia, Factores Fabularum.

Seeing therefore that there are Four Kinds of Quality: Habitus, & Despositio: Patibilis qualitas, & Passio : Potentia Naturalis, & Impotentia: Forma, & Figura: and that it is most certaine, that the rest of these are properly said to Operate, or as the Philosophers speake, ad agendum conducunt: as for example, a Habitude of Singing, a Disposition to Leaping; and so of the rest: which the Reader may better understand, by the Table following, which cannot so conveniently be tranflated into our Language.

> Habitus Dispositio: Sut Saltandi.

> > Patibilis.

CHAP: V:

The power of Artificiall Images is proved by that of those that are found Naturally imprinted on Stones, and Plants, commonly called, Gamahe, or Camaicu, and Signatures.

THE CONTENTS.

He Division of Naturall Figures, or Images. Gamahe, or Camaicu, drawne peradventure from the Hebrew word במייה Chemaiah.

2. Of diverse rare Gamahes, or Stones Painted Naturally: and why they are more frequently found in Hot Countries, then in Cold.

3. Of other Curious Gamahes not painted, mentioned by Pliny, Nider, Gesner, Goropius Becanus, Thevet, and M. de Breves. new Observation, on the Bones of Giants.

4. Of Gamahes that are Ingraven: and whether those places, where ever any Fish shells are found, have been covered with water, or

5. Certaine admirable Figures, and Signatures, that are found in all the parts of Plants. Many Choyce Inquiries proposed, on this sub-6. The

6. The power of these Figures proved: and the Objections answered, that are brought against it.

7. The Secret discovered, why a Scorpion, applied to the Wound made by a Scorpions sting; should not hurt, rather then cure it.

8. Of the Figures of Plants, that represent all the parts of the Body of a Man; and, that cure the same, when Ill-affected.

9. The Formes of all things admirably preserved, in their Ashes.

10. The Ghosts of Dead Folkes, that appeare in Church-yards, and after great flaughter of Armies, whence they proceed. Certaine Choyce Questions proposed, touching this Argument.

11. A New Reason given, of the Raining of Frogs, which hath sometimes happened.

12. Of Figures that are found in living Creatures; and what power they have.

Hen I confider the wonderfull Effects that are found, not onely in Plants, and in the most stupid of

Living Creatures; but also even in stones, and the most rude, and unpolished Flints that are found: I confesse I find my ielte very much inclined to the beliefe of that, which our Halfe-brained smatterers in Learning account Ridiculous, and Fabulous. For, who would ever have thought, that besides

6.7.

those many Wonders, which have been difcovered to be in the Load-stone, but in the daies of our Grandfathers, there should yet in Our Time also be found out This, in a certaine kind of Load-stone, which is of a Mix Colour, betwixt white and blacke, and some thing resembling that of Iron, that, if a Knife or Needle be souched with it, it will cut, and enter into a man's body, without the least fense of paine at all : Which hath given occafion to a very Learned man, who himselfed so had tried the Experiment, to say; thatour fubril, 1. Mountebanks, which we see to cut, and slab themselves upon their Stages in such manner, without the least change of countenance, do make use of this Experiment. But my purpose here is not, to set downe indifferently, what ever wonderfull effects there are found in Stones, and in Plants: Their severall F gures, the power whereof we now undertake is the only subject, which at present I have proposed to my selfe. It is necessary there fore, for the avoyding of all Equi vocation that I make a Division of these Figures; the Generall name being already known.

1. They are therefore either Natural Accidentall, or Artificiall: of which, this Last fort shall be the subject of the Ensuing Chapter, and the two Former Kinds, This. Now, both the Naturall, and Accedentall,

dentall, as they are of three forts that is, Imboffed, or rifing up; hollowed, or Naturally ingraven; and only Painted. so are they found also in three forts of things; namely, in Stones chiefely, in Plants, and in Living Creatures: which neither Albertas, nor Camillus have observed. Now there is this Difference betwixt the Naturall, and the Accidentall: that these Later (say Writers) are not made to any End Proposed; whereas, on the Contrary, those other are never produced without some Reason, or other. The Accidental are produced after some such manner, as was that Act of the Painter; who, being notable to expresse, to his mind, the Foaming of a Horse, in a fury threw his Spung at his Piece, with a purpole utterly to deface it: but it so happened, that, what his Pencill could not doe, his Spunge performed so rarely, that it was impossible for any hand to mend it. This Foame then was made, without any Intention of the Painter to make But if I should say, there is no such matter, in the Works of Nature, I should say nothing, but what were Justifiable. For, if we are taught even by Divinity it selfe, and Reason also confirmes it; that there is a Certaine Providence, which leads on all things to their End; and which makes nothing, but to some purpose: why should we then ascribe to Fortune, H 2

Fortune; any thing that causeth us to admine the Power of God; and, to impute to Chance, things that are of greatest Admiration? seeing that, among so many Leaves that are found in a Forest, there is not one of them falls, without the Will and Pleasure of Him, that created them. But suppose we should admit, that there are some Figures Accidentall: we shall notwithstanding endeavour of prove the power of a good number of such, as must needs be confest to be Naturall. Let us now in Order consider, both the one, and the other.

We have already faid, that they are found in three forts of things; in Stones, in Plants, and in Living Creatures. Those that are found in Stones, are called Gamahes; a word derived, in my opinion, from Camaien; by which name, in France, they call all Figured Agais: so that from this Particular name, there is now made a Generall Appellation, serving to expresse all sorts of Figured Stones. To give an account now of this word, and to tell whence it is Originally descended, is something a difficult thing: no one Author that I have met with, having resolved this Doubt, or indeed so much as proposed it: only this one thing I do affuredly know, that it is no French word, but a Stranger. I have sometimes thought; that, as the Jewes,

who lived a long time in France, have left us many of their Words; (as I prove elsewhere:) they might peradventure have left Advice us this also: and this Conjecture seemes furles the more probable, in that this People traficks much in precious Stones. Now the word במיוה Chamaieu, may have beene corrupted from Chemaija, which fignifies, As the Waters of God: because that you shall see some Agats streaked in such manner, as that they perfectly represent the Figure of Waters: and the word, God, is here added, according to an Idiotisme, frequent in the Hebrew Tongue; which, when it is to speak of any thing of Excellence, usually addes this Holy Name after it. Thus, speaking of a pleasant Garden, it calls it, Paradisus Domini: of a great Army, Exercitus Domini: of tall Cedars, Cedri Dei: of high Mountaines, Montes Dei: and so of the rest. The Figures then, which are reprefented on Stones, are as we have formerly laid, of Three forts also: either Painted, Embossed, or Ingraven.

2. The Painted ones are of two forts; either Coloured, or without Colour: the Coloured, are all such as are found on Agats; such as was that of King Pyrrbus, where the Nine Muses, richly apparrelled, were represented dancing, with Apollo in the

H₃ mids

WDO

midst of them, playing upon a Harp. Cardan cannot believe, that this Figure could card. do ever be so exactly drawne, by meere Acci-Subtra. 7- dent: but rather is of opinion, that it was made after this manner. Some Painter. (faies he) had, long before, pictured, upon a piece of Marble, Apollo amidst the Muses, and afterward, either by Chance, or upon fer Purpose, this Picture being buried in the ground, in some place where Agates were generated; the Marble was turned into Agare, and yet still retained the very same Lineaments, which had beene formerly drawne upon it. A very pleasant Conceit, this! But what would he have faid, if he had feen that which M. de Breves hath observed, in his Voyages into the Levant, of a Crucifixe represented Naturally, on a Marble Stone: I have seene (saith this great Inquirer after Curiosities,) another the like Wonder at St. George's in Venice; Relations where the Figure of a Crucifixe was reprefel. 137. sented upon a Marble Stone; but with 6 much Life, as that you might there plainly distinguish the Nailes, the Wounds, the Drops of Bloud, in a word, all the particulars, that the most curious painter would This Crucifixe now (achave expressed. cording to Cardan) must needs have been drawne upon some other kind of Stone, which

which was afterwards converted into Marble; which is very ridiculous: or suppose, that this was not some other Stone turned into Marble; but that it had, by some Extraordinary Meanes, only received, and retained the Figure of some Crucifixe, which had been applied unto it: We must then be forced necessarily to say, that all other Stones have received those Figures, which we see perfectly represented upon them, by the like Application: which Opinion is farre wider of Common Sense, then the Former. M. de Breves either had not observed, or else had forgot to speake of that other Gamahe, or Wonderfull Figure, meerly Naturall, which is to be seen in the same Church, upon an Altar of Jasper-coloured Marble. This Figure is a Death's Head, so exactly drawne, that you cannot find any part of it defective. How prodigiously full of Wonder the Effects of Nature are, which shewes her selfe Admirable in all her waies!

And here we are to take notice, that these Figures are more frequently found, toward the Eastern, and the Southern Countries, then in any other; by reason of the Heat, reas. 30 by which they are generated, and the Virtue cop. 40 of the Stars. In India (saies Albertus Magnus) plures quam his Gamahe, quit potenti-

114

W. 10

Lib. de

Mirab.

27.3.

ora astra. In Italy there are also more of them seen, then in France, for the same reason: and even in France, at Limans, a Village in Provence, about a League distantsrom Forcalquier, a City of good Note, there hath been sometime found, in a certain Mine of a kind of Reddish, soft stone, a great number of thele Gamahes, or Painted Figures, of Birds, Mice, Trees, Serpents, and Letters, so exactly shaped, that little Children could tell what they were: and although I had purposed, at my returne out of Italy, to have gone to fearch for some of them; yet a Fever, which hindred me from enjoying the sweetnesse of my Native Soile, made me also forget to inquire after the Curiosities: yet, I have some while since written for some of them; that so I may be able to let my Friends see the Raritie of this Wonder. 'Three leagues from Lions, which is a Country hotter yet then This, there are found, on the Coast of Iseron, great store of Stones, which divided in two, yeild many of these Gamahes, exactly figured. You may adde, to these Painted Figures, that which Albertus Magnus faw at Collen, on the Tombe of the Three Kings; which was, the Heads of two Young Men, onythine. very white, drawne by Nature upon a Cornaline; but so ordered; as that the one was placed

placed upon the other; so that there appeared, of the undermost, only the Nose, and a little of the other parts of the Face: in a manner like to those Medals of Gold. and Silver, which were made at the Marriage of the Last French King; where His Face was figured, upon that of his Queen. There was likewise seen, upon this Gornaline, a Black Serpent, that encircled the two Heads: in manner of a Garland; and that with so much perfection, that Albertus could not believe, that it was the workmanship of Nature: Probavi autem (saies he) quod non est vitrum, sed lapis : propter Exed. quod prasumpsi, Picturam illam esse à natura, Trest. C. e non ab arte. The same Author also 1. faw at Venice one of these Gamahes, upon a Marble Stone, that had been fawed asunder: and this was the Figure of a Kings Head, with a Crowne upon it; and there was so much perfection in this Naturall Peice of Picture, as that the skilfullest Painter in the World would have found it a very hard Task, to have copied it: Such was the Majesty of his Countenance, Eyes, and Mouth; that it filled with Astonishment all that beheld it. In a word, it was in nothing defective, fave that the Forehead was somewhat greater then the Life: and the reason of it was, saith he, because that the

hot Vapour, whereof this stone had beene formed, being too vehement, it mounted higher then it should have done, in the forming of this Figure. Cardan tels also of another of these Gamahes, on an Agate; where was represented the Hemisphere of the Heavens, with the Earth placed in the midst, and as it were upon the waters: and many other the like wonderfull Rarities hee makes mention of; as the Reader may see; in the

above-cited Book of his.

3. Those Figures, which are not painted at all, cannot be knowne otherwise, then by the ending of the Lines: and yet do they notwithstanding perfectly expresse that which they represent. Of this fort, in my judgement, is that, M. de Breves faw at Bethlehem, upon one of the Tables of Marble, that adorne the place, where the Cratch is: upon which you have, represented, an Old man, with a beard, and a long Gown, with a Cowle fitted to it: and all meerly, by the meeting together, and Casuall corresponding of the Lines of the Stone. Ni-5.6.6. der reports, that in Mauritania, neer to the city of Septa, there is a Fountaine, where there is found a certaine kind of stones, that naturally represent all the words of the Ave Maria. As for example, in one you shall have Ave Maria, written at length: in another, Gratia plena : and in others, Dominus Neither will this Story seeme so incredible, to any man, that shall but consider; that the late King of France was sometime presented with a company of little Flint-stones, that, by the Letters naturally figured on them, did make up his Name at large. Now if Nature doth produce, among these litle Flints, some that bear One Letter, and many also that have Two, or Three, why may she not as well produce One greater stone, where the word Maria may be found at length? And if any man have a minde to impute this, to some extraordinary Working of God, I shall not hinder him: as it is in like manner faid of the fore-mentioned Old man at Bethlehem; which is conceaved to be the Portraiture of St. Ferome, which was thus wonderfully represented upon the Marble, by reason of the great Devotion he bare to the Cratch: And in this sense, I shall be able much more easily to make good the Power of Figures, which I have undertaken to maintaine: although I shall notwithstanding endeavour hereafter to produce such natural! Reasons, as shall confirme the truth of my Affertion. The same Nider reports also, that the Marquelle de Bade had a Precious Stone, that, on which fide so ever you looked on it, it alwayes represented

mie.l.6.

En ses

fol.476.

presented a Crucifixe, naturally figured on As for that other strange Effect which was observed in it, it was rather Externall, then particularly Appropriate, either to the Stone, or to the Figure. For they fay, that if a woman, that had her Monethly Courses upon her, chanced to look onit it instantly covered it selfe with a little darke Cloud; which afterwards vanished by little and little. Peradventure it was polished, and made as smooth, as Looking-glasses are, which are often observed to be sullied, and loose their Lustre, when women in that Condition have looked upon them. Goropius Recanus also affirmes, that he himselfe saw in England, a Pearch-fish so perfectly figured on a stone, that you might distinguish both every part of the body, and every little This Stone was taken up, upon one of the highest mountaines in the Kingdome: So that Cardan may learn from hence, that this stone could not possibly have been thus figured, by the touch of any Fish of the Sea; neither was it a Pearch, which had been turned into a Stone: for, who should carry it (faith he) to the top of an unhabitable Mountain ? Plinie reports, that there was the Image of a Satyre found, in a Marble itone sawed in two : and Gesner, a very learned Switzer, makes mention of another Ga-

mahe, which represented two Roses; and of another, that was full of starres. You may have recourse to the Tract which hee Lib.de hath written of this subject, divided into rerum Thirteen Chapters; where he tels you, of er gemmany Gamahes, which represent, some, Co-mar-femets, others, Plants, Fruits, Fishes, Living gur. Creatures of the Land; and some Artificiall things too. I wonder notwith standing, that he should forget to speake of Embossed Gamahes, which the earth produceth: such as was that of the Virgin Mary, holding her Sonne in her armes; which was, Natutally represented in a piece of a Rocke, and with very great Reliefe; and was found, in one of the Illes of the Archipelago; as Thevet testifies, in his Cosmography. And in the Loc.ci-Caves that are found in a certaine Defart, in tat. Provence in France, called l' Hermitage Sainet Maurin, distant two leagues from Reiz, and from Moustiers: a Desart, that is indeed a very horrid one, by reason that it is encompassed with Rocks, but which is much more to be admired, then that of the Grand Chartreuse: whether you consider the Aire of it, which is, for the most part, seteene, and pleasant; or its Christall Fountaines, whose Originall is wonderfull: or the beauty of its Caves, which seem to be a Palace, fit for Nature to inhabit: or the **Flowings**

Plin.l.

34.6.5.

In Ni-

lofcop.

lib. 3.

Flowings of its Verdon; which being pent up by too small a Channell, makes a noyse which causeth a Horror suitable to those ho ly Solitudes: in these Caves, I say, are found good store of these Gamahes, Embossed which represent almost all the severall som of Figures, that can fall within a man Imagination. You shall see some of them, as hanging on high; others appeare, a placed fide-wayes; as you fee Images placed in wals : as if Nature had not forgotten any thing, that might serve to render a place commendable. About seven leagues from Anxerre, in those Caves which they call, Antonnoirs, there are found almost the very same Gamahes, or Figures: and both the one, and the other, have all of them alittle holein them, running along through them from the top to the bottome: and my judgement of these Figures is, that they are nothing else but water petrified, or congealed to stone: for they hang downe, (at least the greatest part of them) as if they were fastened to a Roofe above.

Goropius Becanus, speaking of this kind of Gamahe, assures us, that he hath seen Bones, that have beene produced Naturally within the bowels of the Earth; which were of a very Prodigious magnitude, though they were generated of other Matter. And of this

Kind

Kind peradventure are those Bones, whose vast bignesse hath caused people vainely to conclude, that there have beene heretofore Gyants in the World: So true it is, that for want of the true knowledge of the Secrets of Nature, men usually fall into most grosse Errors. Now these Embossed Figures that are found in stones, are of two forts: the first, are whole Embossed round; as was the Piece of Rocke in forme of the Virgin Mary; and these Bones, that the Earth Naturally produceth: the Other are only in Reliefe, or only halfe-emboffed; fuch as were those Rocks, which Ortelius makes mention of, scituate in the entrance of the most Western parts of Tartary; on which are to be seen the Figures of Camels, Horses, Sheep, and many other things; the Marvellousnesse whereof this Geographer being not able to In Fab. comprehend, he saies : Hac faxa, hominum, sciogr. camelorum, pecorumque, caterarumque rerum formas referentia, Horda populi gregis pascentis armentaq; fuit : qua stupenda quadam Metamorphosi repente in saxa riguit, priori parte nulla in parte diminuta. And then, to make the story passe for a Truth, he addes: Evenit hoc prodigium, annis circiter 300. retrò elapsis. But leaving him to go along with the herd of ordinary writers, (who, when they cannot give the Reason of any thing, are faine prefently

fently to flye to Miracles:) I say, that these Tartarian Rockes (if there be any Truth in the Relation,) are only Gamahis, generated by Nature: Otherwise, wee shall be forced to forge new Miracles, for all the Places, where ever any of the like Effects are produced; which would be most ridiculous, feeing that we shall by and by make it appear, out of the Writings of one of the most Pious, & Learned Men, the Ages past have brought forth, that these Effects are the Workmanship of Nature only, who produceth them no otherwise, then shee doth Flowers. Of this fort of Gamahes were those three Serpents, sigured within the hollow of an Oister-shell, which were found, by the King of Castili's Cookes, in the belly of a Fish. These Serpents were figured with their Head Relieved, or fivelling up, and that so naturally, as that they seemed to be alive. The upper part of the Shell also afforded pretty Variety of the like Figures: and, which was most of allto be admired, there was not one of them, but had a Hole running along through it, from the very Mouth to the Taile, though it were indeed but a very small one. Therfore saith Loc. Ci- Albertus Magnus, Constat per illud experimentum, etiam Figuras elevatas super lapides aliquando fieri à Naturâ.

4. Those Figures that are Naturally Ingraven

graven upon Stones, are either graved Superficially only; or Transparently, so as the Graving passes through the body. Of this later kind you shall oftentimes meet with some. among the heapes of hollow stones, that are found in the fields; wherein you may observe: the form of a Head, by the little Holes, which represent the Eyes, the Nostrils, and the Mouth: and fometimes also you shall have of them, that have the forme of a Death's head, either of a Man, or a Horse. As for those other, which are only superficially graved, you may have store of them, among the little stones on the Bankes of Rivers, and upon the Sea-shore: where you shall light upon some, so exactly representing the figure of shells, that you would think they were the Naturall. shels of Fishes: and this fort ought rather to be reckoned in the number of Embosfed:Gamahes, then those that are simply Graved. My Brother hath sometime been very diligent in learching on the Sea shore, and gathering together what Shels, or other Stones of any rarity, he could meet with: and he hath presented one to Mr. Frey, which perfectly resembletha Goat's Horne: and I am of opinion, that it is one of those, which the Ancients. called, Cornu Ammonis; as you may see in Georg. Agricola, in his Lib: 5. de Natura Fof-I thought at first, when I saw some ilium.

of these Stones figured like shells, that they had been at first Reall shels of Fishes, which had afterward been Petrified, and turned into Stone, by the Vertue of some kind of water; they were so perfectly, and exactly formed. But I have fince confidered, that, feeing that there are found of them upon the tops of the highest Hills, they must necessarily be Gamahes, and the Workmanship of Nature; which without doubt hath not produced them, but to some end; as we shall see hereafter. From hence you may judge, whether, or no, Gorepius hath not good reason to reprove those, that confidently affirme, that Agypt, and a part of Æthiopia hath heretofore been covered all over with the Sea, because that there are some of these shels frequently found in those Parts. For we may as well conclude, by the same Argument, that the Apennine, the Alpes, and the Pyrenean Hils, have been sometime also overwhelmed with the Sea; which is most Absurd: unlesse they meane, at the Generall Deluge: but this is not their Intention. Let us now come to the Figures of Plants.

5. The most Learned among the Naturalists divide them thus. A Plant, say they, is either Arbor, or Cremium, or Frutex, or Herba. A Tree is a Plant, that hath a great Trunke, or body: the Cremium hath but a

little one: the Frutex hath many and the Herbe, is that, which at its first Appearing out of the ground, puts forth only two little leaves. I find then, that in all the severall Kinds, there is an Infinite Number of Admirable Figures, which are called by the Philosophers, Signatura verum: now, One Part only of a Figured Plant, and not the whole Plant, is called Signatura: or you may fay, the Signature, is some certain thing in that Part. I speake not here of Internall Signatures; the Doctrine of these belong to Chymists: My purpose only is, in this place, to discourse of those that we meet withall in Plants, which the Ages past have taken very little notice of. I shall begin then to shew, in order to the parts of Plants, what Signatures, or Marvellous Figures, Nature hath produced in them.

And first, the Root of diverse sorts of Plants, representeth diverse parts of Our Body: as, that of the Hermodastil, resembles a

man's Hand.

The Body, or Stocke is yet more Admirable: for whether it be in great Trees, or in small Plants, you shall find Figures, that represent the Parts of Living Creatures. Among these later, the Serpentaria major perfectly resembles the skinne of a Serpent, as doth also the Dracunculus, and the Ophioscorodon: among the Former, wee must consider

little

2

aer

pent, of a Bird, of a Fly, &c. perfectly ex-

pressed, by the streakes of this variegated

der either the Wood, or the Barke of them.

In the Barke you shall many times see, especially in that of Old Trees, many Figures, representing diverse Kinds of things, by the Various Cranies and Clifts that are in it. In young Trees, where the Barke is closer, itis figured with many little Streakes, and Lines, in the nature of Painting: and I have sometime observed, upon the Barke of a young Cherry Tree, the figure of Little Trees laden with fruit, so naturally exprest, as if it had been done with a Pencill.

The Wood is yet more Admirable, then the rest; seeing that in many Trees, there is the very same Variety found, that is in A. gats: and it is not many daies fince I was in-

formed, that there was a Tree lately found in Holland, which being cut in pieces by a woodcleaver, they saw, in one part of it, the Figure

of a Chalice, in another, that of a Priests Albe, in another, that of a Stole, and, ina word, there were represented very near all the Ornaments belonging to a Priest. If the Re-

lation be true, we must needs confesse, that these Figures could not be there Casually, or In La. by chance. But, to come to a kind of wood

tine, A- that is more Common; in boards of Maple, Flem which is a wood fufficiently known to every body, you shall often find the figure of a Ser-

Wood. There are also some other sorts of Wood, that represent some of these Figures, but not Painted, but Imbossed. So, at what time I was a Student at Apt, a City in Provence: very famous for the Relicks of Saint Anne, mother to the Bleffed Virgin, which are faid to be kept in this place; I faw the Trunke of a Vine, which represented a Man's Face, as far as the haire of the Head, so lively, as that you might percieve the Fore-head, the Eyes, Nose, Eares, Mouth, Chin, all exactly formed, and in very good proportion. It was brought by a Vineyard-keeper, to the shop of M. Roulet, a Surgeon.

The Branches of Plants are lesse Considerable, in matter of Figures, then all the rest; (though it were in Wood:) neverthelesse you may oftentimes observe in them; some kind of Resemblances of the Fingers of a Man's hand; and of the Bushinesse of his And this is the reason, in my opini-Haire. on, why the Poets, when they discourse, in their Metamorphofes, of the Transforming of Men into Trees, they say that their Fingers, and the Haire of their Head, were changed into Branches. In the Branches of Corall, you shall often meet with many Curiofities, and the thing is not fo Rare, or scarce,

Masaros.

but that any man may easily see the Experiment:

The Leaves seeme to surpasse all the other Parts; being divided into fo many Figures, that there feemes not to be anything in Nature, the Image whereof is not to be found among them. If the question be made of the Parts of Mans Body; they are here represented: if you would have a Representation of the Waters, you shall find among these, some that are Waved: if you would have the Living Creatures of the Land; you shall have some, that have their Feet, and Walke, as They doe; such as are those, which are found in the great Isle of Burner, which are described by Antonio Pigafetta: if the Birds of the Aire, and the Fishes of the Waters; you shall find some that are skaled, and which have Finnes; and some, that have both a Bill, and Wings, and which doe in a manner Fly.

Lib Phi- I refer you, for the truth of these Relations, 43. to Baptista Porta, Barthol. Chassanaus, fo. Lib. de Torquemada, Thevet, Cardan, Scaliger, etcr. & Guil. Rovillius.

glor. & Guil. Rovillus.

mund.
part. 12.
then Thele: for They likewise represent the
1,6. Figures of Living Creatures, both Beasts, FiCosmogr. shes, & Birds, the Stars also, the Rainbow,
De subt. and almost all the other Kinds of Metcors.

Exercit. 112. Hift. Ind. l. 18. c. 88.

Fruits also are equally to be admired, for their severall Formes, and Figures: and although they doe not represent the figures of so many Various Things, as Leaves, and Flowers doe; yet they doe represent very many, and very confiderable ones: as you may observe in some Gourds, Peares, Apples, and other Fruits. That fort of Pease, which the Latines call Arietini, resembles the head of a Ramme: as another fore of them, (which are for the same reason called Columbini,) doth a Pigeons: having each of them this Quality, agreeable to their Figure, that they are both equally hot. So Beans likewise, beare, on one side, the Form, and Figure, of a Mans Privy Parts; and, on the other, of a Woman's. And perhaps it might be for this only cause, that Pythagoras gave that Precept to his Schollars, (which hath yet been rightly understood by no man;) A Fabis abstineto.

Neither is the Seed, which is the Part of Plants that is brought last to Perfection, as being of the Greatest Importance, altogether deprived of the Beauty of these Figures. For that of the hearb *Echion*, or wild Buglosse, resembleth the Head of a Serpent, with it's Mouth, and Eyes: and for this cause also it is observed to be very Soveraigne, against the biting of Serpents; ac-

I 4 cording

cording to Dioseorides. That of Rue is made in the fashion of a Crosse; and this Leonard. peradventure is the reason, that it is of so Puchs. great Vertue, in the cure of those that are Hift. Possessed, and that the Roman Churchu-Plant. 64.103. seth it, in their Exorcismes. You may also observe some kind of Resemblance of the Privy parts, both of Men, and Women, in a Graine of Wheat, and in the stones of Grapes: and my Opinion is, that out of Mosc. De this Observation, may be raised a Philoso-Variet.C. phicall Interpretation, far above that which is usually given, of this Proverbiall say-

ing : Sine Cerere, & Baccho friget Venus.

phyte, or

Sur les Tabl. de

If, after you have considered all the pans feyerally, you but take the Whole Enurc Plant altogether; you will yet meet with Plant. 1. some such rare Figures, as would seem Incredible; did not such Excellent Historians Eden. fol. confirme us in the beliefe of the Relation. Of this fort is the Boramet, which growes Perhaps in Scythia, having a perfect Resemblance of a Lamb, having a Head, Eyes, Eares, Teeth, that 200and the rest of the parts of the body proj portionable. This Plant crops, and feeds Animal, upon all the graffe that growes round about called in it; and when there is no more left, it dies Hebrew, with famine. You may see the story of it, in * Sigismundus, Cardan, Scaliger, Vigenerius, Guil. Rovillius, Duret, and in one of the most Excellent Excellent of the French Poets, who speaks of it in thele verles.

Tels que les Boramets, qui chez les Scythes naissent,

D'une graine menut, & de Plantes se paissent: Bien que du corps, des yeux, de la bouche, & du nez.

Ils semblent des Moutons qui sont n'agueres

Englished thus, by

Fof. Silvester.

Such as those Boramets in Scythia bred, Of flender feeds, and with green fodder fed:

Although their Bodies, Noses, Mouthes, and Eyes,

Of new-yean'd Lambs have full the form, and guise.

Now in all the parts of Plants, the Figures are either Internall, or Externall only; or both Internall, and Externall also. The Internall are, such as the Fruit of Palestine; which beares the Figure of Ashes within; and likewise all the forts of Figures, that are found in fawing of Marble. Externall are, all such as are Painted, and Coloured on the Outside of the Fruit, but

not at all Within, in like manner as the Apple, called in France, the Fambure, is; which is all speckled with red spots, like drops of bloud, but only on the Outside, or Rind. Those that are both Internally, and Externally Figured, are fuch as the Maple Wood; and many forts of Stones. The Internall Figures are likewise discovered, either by Any Manner of Cutting Indifferently; or else, by one certain Particular Way only. That which appeares after Any Manner of Cutting indifferently, is, as in that kind of In Forn. Apple, which, as Nider reports, hath beene seen at Granada, which being cut any manner of way, did still neverthelesse represent the Figure of a Crucifixe. That which requires One only Particular way of Cutting, is, as in the Root of Fearne; which beingcut One way only, represents an Eagle persectly. I have often observed, that an Orenge likewise so cut, not a-crosse, but long-wates, represents, with its kernels and little skins, an Orenge Tree laden with Orenges. It is also observed that the Kernels of an Apple represent the Tree.

These Figures doe yet consist, either in the Colour; or in the Division of the Parts: in the Colour; as in the slowre of the Hearb Eye-bright, which represente those of an Eye: in the Division of the

Parts; as namely, in those we have already spoken of.

Thus have we seen the Division of Figures: it remaines now, that we prove, that they have some Power to operate; and, that it is not in Vaine, that they are perfectly represented both in Plants, and Stones. Proceed we therefore, in the same Order we have observed in our Division, beginning with the First.

6. I fay then, that the Naturall Figures, which are found in Stones, have Naturally a Power to Operate, if they be Applied; and this I shall prove, by two Reasons. The First is, because they are called Effectrices: and the Second is, because we see it by Experience: For we daily see, that some of these Figured Stones do Operate upon the Same Things that they represent; as for Example, that Stone which we call Heliotropium, which is all speckled as it were with Drops of Bloud, if applied to the part that bleeds, it stops the Bloud. Others there are, that worke upon the Wound that is made by the Image they beare. So Pliny affirmes, that there is a kind of Marble called Ophites, by reason of its resembling the Figure of Serpents, whose name it beares: which, if applied to the wound caused by the biting of those Venemous Creatures,

it

it healethit. See his own words: Genus Mar-Lib. 36. moris ab Ophite dictum, quod imaginem horum Scrpentum reprasentet; molle, candidum; nigran que durum ; dicuntur ambo Serpentum ictus sedare. And here we may make This Division of the Figures that are foundin Stones, and fay, that they are of two forts. The one are found in some certaine stones. and are alwaies the same: and these are Naurally endued with very admirable Vertues. The other, are such as are not tyed to any certaine fort of Stones; but are indifferently found in all; and are not indeed of so great Desab- Vertue, as the Former. And this is the til. L.7. division that Cardan makes of them : Verum, layes he, mire quispiam dubitet, vnde figure ha in Gemmis, & lapidibus proveniant! neque enim credendum est omnem siguram casu contingere, cum lapides multi ex eodem Zenere ealdem retineant figuras. Itaque meo Judicio, dicendum est, duo esse Figuram& Imaginum genera: alterum, quod semper in eisdem lapidibus apparet, et hoc a Natura provenit; qua non secus ac in plantis, foliorum et fructum numerum servat & rationem. Hoc figurarum genus vim habet, & aliquid significat, &c. And so going on, he makes mention of a Stone, which Albertus Magnus had; that, being naturally marked with the Figure of a Serpent, had this admirable Vertue.

Vertue, that if it were put in a place that was haunted with Serpents, it drew them all unto it. He speaks also of diverse others, that would cure the biting of Serpents, and expell their Venom. You may see diverse of these admirable Gamahes, in Georgius Lib. r. Agricola; who reckons up, what stones there are, that represent all the parts of mans body; as well as those rare Fruits, and Plants do, which we shall hereafter speak of.

And here it is commonly objected, that it is not at all the Figure, that produceth any such effect; but some occult Quality, wherewith the stone is endued. For otherwise, if the Figure were Operative, one drop of Blood would stop Others; and a living Scorpion should cure the stinging of another Scorpion: forasmuch as there is much more conformity, and nearnesse of Resemblance, betwixt two Reall drops of Blood, or two living Scorpions, then betwixt one Pictured, and one living One, &c. And this is the strongest Objection, that our moderne Philosophers do bring, and by which they do conceave themselves to have overthrown. (though they have litle reason so to do,) the Power, which the Ancients attributed to Figures.

First therefore, to answere these Objections, it is true indeed, that the bare Figure

represented

represented on stones, hath not of It Selfe any power at all to operate, though applied. except there be some Internall, or Externall Agent, that may co-operate, and affift the Figure; or unlesse the matter be Proper, and Apt to operate: as, for example, a Pointed Figure wil never be able to Penetrate, though it be applyed; if it be either of fost Waxe, or of Butter: because that the Matter is not at all proper to Penetration: but the same Figure in Wood, Iron, Brasse, or any other hard Matter, will very cafily penetrate. In like manner, if a Stone have not, cither from the starres, or from its own Nature, some Quality proper to such, or such an effect; as for stopping of Blood, some Restringent Quality; and so of the rest in vaine should we expect to finde any perfect power in the Figure. To say then, that it is (for example) this onely Restringent Quality, that stops the Blood; and that she Figure of the drops of Blood, wherewith the Stone is spotted, and painted, is of no Concernment at all in the businesse; to fall back into the former Error: For, to what purpose then hath Nature bestowed this Figure on the Stone : there must necessarily be given some kind of reason for it. If it be anfwered, that Nature had no purposed End, in giving this Figure : this were to deny that Principle

Principle, which is generally receaved by all: id non frustra fit , quod Natura semper facit, vel plurimum.

There were indeed very good Reason to doubt of this Power, if the Marble called ophites, (which represents the Figures of Serpents, by whose name it is called,)would cure the biting of a Dog, or of a Horse only : But seeing it cures the stinging of Serpents onely, and of no other Beast; why should we not attribute something to the very Figure? But to prove more forcibly, that these Figures have some Power to Operate; against the perversenesse of those that dispute against it : if those which represent Scorpions, Serpents, Toads, do find the nature of the place Proper, and aptly disposed for the supplying of the Stone, or other Matter on which they are found, with a Quality, and Nutriment, agreeable to the Nature of the Thing, whose Image they beare, these Figures will then certainly be turned into Reall Serpents, Scorpions, and living Toads, and into no other kind of Creature. So that our Philosophers need not now vexe themselves any more to find out, how, or by what meanes a Toad should come to be generated in the midst of a great stone; as was that, descri-

bed by Georgius Agricola, which was found Do Aniwithin a Mil-stone, when it was crackt, or mal. sub-

broken

128 ... broken in pieces, either by the force of the Venom, or else by the Violence of the Motion: and also how that Other was generated, which Goropius Becanus faw at Anvers, which was found in the Sawing in two of a very thicke Marble Stone, that had neither Hole, nor Rift in it. For, the Figure of a Toad having beene first represented within these Stones, it so came to passe, that by some Property of the Place, it was afterward changed into a Naturall, Living Toad. And the very selfe same may happen in any other Figures, except that of Man, whose Fabricke is from the hand of God alone. We may conclude therefore that these Figures are not represented in vain, both on Stones, and on other things: seeing that if they be Rightly Applyed, they affuredly have some Secret Power, according to the Principle before laid down. And here I had almost forgotten to informe the Reader, that, without searching after any forraine Examples, we may dayly see, at the Plaisteries at Argentueil, the like Toads, and other such Creatures, engendred with Stones, and the very hart of the hardest Rockes. I conceave therefore, that after the very same wonderfull manner of Generation, those fishshels also, which are found on the tops of Mountaines, are produced: not in the Sea,

(as some Ridiculously have imagined;) but upon the very place where they are found: which gave occasion to that Curious Inquirer into the Secrets of Nature, to draw from hence this Conclusion: Ubicunque igitur Gorop. in humor, sive liquor invenitur, ad Testaceorum Nilosc. vitam idoneus, viva Testacea generantur. He speaks this in discoursing of diverse severall Figures, or Gamahes, that he had seen, in diverse places: and then he goes on and sayes further; Opifex enim progeditur eò, quoad ejus materia patitur, ultrà progressurus, si loci & materia inopia non excluderetur. If a Figure then have so much Power, as to change it selfe into that Living Creature that it represents, (provided that it meet with no Impediment;) how can it be denied, but that they also have the Power to Worke, by some secret Sympathy, (if appled,') upon the Wound given by the Creature, which they refemble:

7. Now, why the fame Figure should not rather hurt, then heale a wound so given; feeing that the Living Creature it selfe being Venomous, its Figure also, should by Sympathy be Venomous, rather then Healing: the Reason, I confesse, is very Darke, and hard to be given : neverthelesse I shall here adventure, the First, on this discovety; no man, that I know of, having as yet undertaken it.

We have therefore said before, that when the Figure of a Scorpion, (for example,) being represented on a Stone, findes in the place where it is, any Nutriment, or Humour, agreeable to the Nature of a Living Scorpion; it by little and little acquires Perfection, and having at length drawn forth all that which was proper for a Scorpion, it becomes a Living Scorpion. Wee do also suppose, that when this Venomous Creacure, or a Serpent, Dog, or any other Beast chanceth to bite any; they leave an Impression of some Particular Quality behind: as we see in those that are bitten by a Tarantula, who presently fall into a continuall Agitation; (not that they continually Daurice, as the generall Talke is:) this Venomous Creature having this Quality, thatit is alwayes in continual motion; and though it be cut into many small pieces, yet it will not leave stirring a long time after. And Holikewise Pomponacius, and Campanellastfirme, that if a Mad Dog bite a Woman with child, if there be not speedy Remedy used, the Fruit of her Wombe will beformed in the shape of a Dog, and it will afterwards come into the World, with all the Liniaments of a Dog. So true it is, that if we should but inquire into the Effects of Nature, and should be able to yeeld the rea-

sons of them; we would scorne all that we think we now know. Now I say, that the Figure of a Scorpion, that is Naturally represented on a Stone, is still endeayouring its own Perfection; and where ever it meets with any such Qualities, as are Proper to it selfe, it attracts, and draws them to it. If therefore the Figure of a Scorpion, be applied to a Wound made by a Scorpion: it there findes the Impression of some certaine Quality, made by a Scorpion: which, finding to be Proper and Agreeable to its own Nature, it attracts and retaines with it selse: so that the Wound, being thus delivered of these Qualities that envenomed it, presently heales up, and growes well again. In a word, the Stronger here prevailes against the Weaker: so that in the Figure of a Scorpion, which nature hath represented on a Stone, there being greater Store found of the Qualities proper to this Creature, then there is in the Wound which the Scorpion made; those which are here, are drawn forth by those other, which are in the Stone, as being the stronger, and of greater Vertuc, Upon this Principle also it is, that a Scorpion bruised to pieces, and applied to the Wound, cures it; as dorhalso its Oyle. The biting of the Serpent is also healed, by the applying of its head, beat in pieces; or

De Incaut. De fenf. Yer.

else, by the Serpent it selse, reduced into Powder ; as Crollius , and M. du Chesne, S. De sign. de la Violette, affirme : as likewise that of a Enlare. Crocodile, is cured by its Fat: that of a formation Rat, by its Flesh made into Powder; that of a Dog, by its Haire, or Skinne: the Venom of a Toad is cured by a certaine Stone, that is found in its Head: And if we should fearch after the Properties of other Living Toadsftone. Creatures, we should doubtlesse findethe same thing in all of them. Upon this Principle also it is, that if an Egge that is frozen, be put into Cold Water, it will be thawed in a very short space: and Hands, that are benummed with cold, will presently become unbenummed, if they be put into cold Water, or into Snow-broth. For, the Greater Cold, which is in the Water, finding the Leffe, which is in the Hands; it draws it forth, and swallows it up; just as a small

> should then see a clean Contrary Effect. To go on then in our Answer to the Objection proposed, I say thus: We deny not,

> Candle is lost, if it be placed neer a great

Fire, or a Red-hot Furnace. But if the

Cold, that is in the Hands, were greater

then that in the Water; and the Venom,

that is in the Wound made by a Scorpions

Sting, were more Powerfull, then that

of the Scorpions Figure applied to it; we

but that there is a greater Correspondency betwixt two Reall, Naturall drops of Blood, and betwixt. Two Living Scorpions; then betwixt a Living one, and a Painted. Yea, we rather, on the contrary, acknowledge; that the great Analogy, and Refemblance that there is betwixt them, is the cause that Blood, either broken into little pieces by stirring, or fielhly drawn, and applied to a Wound, Hops the bleeding of it; as Experience testifies, if we may believe Crollius: and the Oyle of Haires distilled, keepes the Haire from falling off: so Earth-wormes, made into a Powder, destroy those that are bred in Our Bodies: and the Gravell of the Urine wee make, is an excellent Medicine against the Stone: and many other Properties there are observed to proceed from this Analogy, or nearenesse of Resemblance. But to returne to our Figures again.

8. The Power of those, that are found in Plants, and their parts, seemes to have some Affinity with that of the Figures in Stones; leeing that they also Operate on the same things that they represent: as, for Example, the Citrull Cowcumber, which in some sort resembles the figure of a Man's Head, is a very soveraigne remedy, as Porta affirmes, against the Diseases of the Head. So the B. Pona hearbs Argemon, Seris, and Belloculus, all in Physics of the B. Pona hearbs Argemon, Seris, and Belloculus, all in Physics of the B. Pona heart of the B. Pona heart of the Physics of the Physics of the B. Pona heart of the Physics of the B. Pona heart of the Physics of the Physics

which represent the Figure of an Eye, doc likewise cure the diseases of it. Dentaria: which hath the forme of Teeth, cures the Tooth-ach: Palma Christi, and Ischamon, which grow in the shape of a Hand, are cures for the Wounds of that Part; as the hearbe Geranopodium is, for those of the Feet; because it beares the Resemblance of them. Crollins proceeds more Methodically, in reckoning up the wonderfull effects of this Resemblance, betwixt the severall forts of Plants, and the parts of Man's body : and the Order he observes, is this.

The Head, saith He, is represented by the Root of Squils, which is of the same figure: and therefore also it is properly applied, in

the discases of the Head.

The Haire is represented by that Hairy Mosse, which growes upon the Oakes, and is called, Pili Quercini: and by Thistle-downe, the Juyce whereof being distilled; makes the haire to grow.

The Eares, by the hearb Afarum, or Afarabacca, which is excellent against Deale-

nesse.

Hift.

The Eyes, by the flowre of the hearbe Po-Plant. c. tentilla, a word, faith Fuchsius, unknowneto the Ancients, and which is called with us, Wild Tansie; the water whereof is of singular vertue for the Sight. The

The Nose, by Water-Mints; the water whereof recovers the Smell, when it is lost.

Unheard-of Curiofities

The Teeth, by the hearb Dentaria, which

causeth the Tooth-ach to ceafe.

The Hands, by the Root of Hermodactil, which is good against Chops in the hands.

The Heart, by the Citron; and the hearbe called Alleluja, which is very foveraigne for

The Lungs, by the hearbe Lungwort.

The Liver, by Hepatica, or Liver-wort; which is of good use, in the Diseases of the Li-

You may see all the Other Simples, in the same Author, that represent the rest of the Parts of Man's body; as the Breafts, Ventricle, Navell, Spleen, Entrals, Bladder, Rheins, Privy parts, Matrix, Backbone, Flesh, Bones, Nerves, Pores, Veines, and cven as far as the Privities; as the Phallus Hollandica, which is particularly described by Adaianus Funius.

9. And here it may be Objected, that the greatest part of these plants, though they be reduced into Ashes, yet do they not faile to workethe same Effects, and to have the same Quality, that they had before: and that therefore this Power is to be attributed to the Na-, ture of the Plant, and not at all to the Figure; which it now no longer retaines, when it is

once

once reduced into Powder.

136

I answer, that though they be chopt in pieces, brayed in a Mortar, and even burnt to Ashes; yet do they neverthelesse retaine, (by a certaine Secret, and wonderfull Power of Nature,) both in the Juyce, and in the Ashes, the selfe same Forme, and Figure, that they had before: and though it be not there Visible, yet it may by Art be drawne forth, and made Visible to the Eye, by an Artist. This perhaps will feem a Ridiculous story to those, who reade only the Titles of Bookes: but, those that please, may see this Truth confirmed, if they but have recourse to the Workes of M. du Chesne, S. de la Violette, one of the best Chymists that our Age hath produced; who affirmes, that himselfe saw an Excellent Polish Physician of Cracovia, who kept, in Glasses, the Ashes of almost all the Hearbs that are knowne: so that, when any one, out of Curiofity, had a defire to fee any of them, as (for example,) a Rose, in one of his Glasles, he tooke That where the Ashes of a Rose were preserved; and holding it over a lighted Candle, so soone as ever it began to feelethe Heat, you should presently see the Ashes begin to Move; which afterwards rifing up, and dispersing themselves about the Glasse, you thould immediately observe a kind of little Dark Cloud; which dividing it selfe into ma-

ny parts, it came at length to represent a Role; but so Faire, so Fresh, and so Persect a one, that you would have thought it to have been as Substantial, & as Odoriferous a Rose, as any growes on the Rose-tree. This Learned Gentleman fayes, that Himselfe hath oftentryed to do the like: but not finding the successe, to answer all the Industry hee could use, Fortune at length gave him a fight of this Prodigy. For, as he was one day practifing, with M. de Luynes, called otherwise De Fomentieres, Counseller to the Parliament, to see the Curiosity of diverse Experiments, having extracted the Salt of certaine Nettles burnt to Ashes, and set the Lye abroad all night in a winter Evening; in the Morning he found it all Frozen; but with this Wonder attending it; that the Nettles themselves, with their Forme, and Figure, were so Lively and so perfectly represented on the Ice, that the Living Nettles were not more. This Gentleman, being as it were ravished at the fight, sent for the said Counseller, to be a Witnesse of this Secret, the Rarity whereof he exprest in these Verses.

Secret,

Secret, dont on Comprend, que, quoy que le corps meure;

Les Formes font pourtant aux cendres leur demeure. In English thus:

This Secret proves, that, though the Body die,

The Forme doth Still within it's Ashes lie.

But now this Secret is not so Rare: for M. de Claves, one of the most Excellent Chymists of our Times, showes the Experi-

ent every day.

From hence we may draw this Conclusion; that the Ghosts of Dead Men, which are often feen to appeare in Churchyards, are Naturall Effects, being only the Formes of the Bodies, which are buried in those places; or their Outward shapes, or Figures; and not the Souls of those Men, or any fuch like Apparition, caused by Evill Spirits; as the Common Opinion is. The Ancients thought, that these Ghosts were the Good, and Evill Genij, which attended alwaies upon Armies: but they are to be excused; seeing they knew not how to give any other reason of these Apparitions: it being most Certain, that in Armies, where, by reason of their great numbers, many die,

you shall see some such Ghosts very often, (especially after a Battell;) which are, as we have said, only the Figures of the Bodies, excited, and raised up, partly by an Internall Heat, either of the Body, or of the Earth: or else by some Externall one; as that of the Sun, or of the Multitudes of the Living: or, by the Violent Noise, or Heat of great Guns, which puts the Aire into a Heat. I have elsewhere handled In Cribr. the Curious History of Spirits; wherein I have propounded these following Questi- Cabal. ons, touching these Ghosts: namely; Whether or no we may, by These, explaine all the Visions, that are mentioned by Writers? Whether those Wonderfull Effects, which we attribute to Demons, or Spirits, may proceed from these Figures, or not? And then, Whether they have any Power at all, or not? And if so; Whence they have it? And if it be granted they have any; Whether they have greater Power, then the Dead Body it selfe, whence they proceed? Or, Whether the Dead Body is of more Power, then when twas Li-rom. 2. ving? as Paracelsus is of Opinion; who, lib. 4. de saies, that Mummie hath in it all the Ver-ber invitue of Plants, Stones, &c. And that it hath siban Occult, Magnetique Vertue, which draws Men to the Sepulchers of those, whom they account to have been Holy men; where,

by the Vertue of the same Mummie, there are those Effects wrought, which we call Miracles: which are observed (faith he) to be much more Frequent in the Summer, then in any other Season of the Year, by reason of the Heat of the Sun, which awakens, and excites the Humour that is in the Mum-But these are meere Fooleries, which we there refute, by fuch Principles, as the Rabbins have drawn, from the Secrets of this so Famous, and Renowned Mummie. After those other Questions, these follow: namely; Whether or no, these Wonderfull Formes, which proceed from the Bloud, the Bones, or the Ashes of Dead Bodies, may ferve for an Undeniable Argument of the Refurrection; a thing unknown to most of the Philosophers: Whether, after they are Raifed up, they can in any thing be serviceable unto us? And, Whether by their Meants, we may be Naturally able to attaine to the Knowledge of diverse Secrets, which are Unknowne to Us? Diverse other like Questions are there proposed, and discussed, plainly, and thoroughly; as I shall let the World see, in a short time: In the meane while, we may fafely account the Objection before proposed to be Invalid, and of no Force; seeing that, though the Body be reduced into Ashes, yet neverthelesse the Figure is not thereby destroyed. 11. And

fon, why it oftentimes raineth Frogs: for, the Sun drawing up Vapours out of some Moorish place, where these Frogs, after six Moneths space (say the Naturalists) are changed into Slime; it may so come to passe, that these Vapours, which afterwards become thick Clouds, may produce, by the Concurrence of the Heat of the Sun, the Forms of Frogs; which meeting there with Qualities proper for their Generation, receive Life, and so become Living Frogs.

Stones, and Plants, our Division leads us to those that are found in Living Creatures, both Rationall, and Irrationall, euen downer

to Fishes.

Those then that are found in Fishes, are, Characters, Ciphers, or all kinds of Armes: such as were figured not many years since, upon a Fish, whose Picture was publickly sold up and down, though it was infinitely corrupted from the true shape of the Fish it was made for. There are some other Marks, or Figures, that are lesse corrupted, which have been found upon Fishes; such as are those, which are set down in a Book, intitled *Prophetia Halieutica*, the Author whereof was one *Raphael Eglin*, Minister of *Zurich*. Of the Three Fishes then,

that

that he there treats of, which were marked with these kinds of Figures, two of them were taken on the Coast of Norway, An. 1587. November 21. and the other, on the Coast of Pomerania, An. 1596. Mai. 21. And the Figures, which he there sets down, are truly worth our Consideration: but, to goe about to make them suit with the Prophesies of Daniel, and of St. John, as Ananias Ferancurius hath heretofore endeavoured to doe, is to make ones self appear Extravagant, and to talk more idly, then men in Fevers use to do.

The Figures, that are found upon Beafts of the Land, are better known, then those upon Fishes: for it hath been often observed, that the Hornes of Deer have been Marked with certain Characters; and sometimes too, even with the shapes of Living Creatures, which have been perfectly represented by them. So we have sometimes icen Cats, and Horses, which have had upon their skins such spots of White, Red, or Black, that by the intermixing of the streaks of the feverall-coloured haire, there hath been represented the Figure of another And if we did not de-Cat, or Horse. spile, whatsoever we account to be either Feidiculous, or of Little Confideration, we should not be put to the trouble of making

fo many strange Inquiries, which are oftentimes more Vain, then Profitable.

Lastly, the Figures which are found upon Rationall Creatures, are such as the Imagination of the Mother, during the time of her Going with Child, hath imprinted there. And here I could enter into a Latge Discourse, concerning the Secrets of these Figures; which are not Commonly known: but, for brevities sake, I shall only give the Reader here one or two Remarkable Examples, which prove very powerfully the Vertue, which we attribute to all Figures. A Sister of mine had the Figure of a Fish upon her Left Leg, caused by the desire my Mother had to eat Fish, when she was Great: and it is represented with fo much Perfection, and Raritie, that you would take it to be drawn by some Excellent Master. Now That, wherein the Wonder lies, is, that when ever the Girle eat any Fish, That upon her Leg put her to a sensible pain. And I had a Friend, that had a Mulbery growing upon his Forehead; caused likewife by his Mothers Longing after them: and he never eat Mulberies, but that his own on his Forehead put him to pain by it's Extraordinary Beating.

This other Story, which I shall now relate, to the same purpose, is very well known to all in Paris, that are Curious Inquirers after these things. The Hostesse of the Inne in the Suburbs of St Michael, at Bois de Vincenne, who died about two years since, had likewise a Mulbery growing upon her Lower Lip; which was smooth, and plain, all the year long, till the time that Mulberies begin to ripen; at which time, Hersalfo began to be red, and to swell more and more, observing exactly the Season, and Nature of other Mulberies, and comming at length up to the Just Bignesse, and Redness of other ripe Mulberies. But, that I may not trouble my felf any further, in reckoning up any more of these kinds of Figures, I shall desire the Reader, to draw from hence a Consequence of the Power of them by these two, or three Examples, which I have here set down.

CHAP. VI.

That according to the Opinion of the Eastern Men, Figures, and Images may be so prepared, under certaine Constellations, as that they shall have the power, Naturally, and without the Aide of any Demon, or Divell to drive away Noysome Beasts, allay Winds, Thunder, and Tempests, and to cure diverse kinds of Diseases.

THE CONTENTS.

i. He insupportable Vanity of some Pretenders to Learning is noted.

2. How these Talismanicall Figures are called in Hebrew, Chaldie, Greeke, and Arabicke. The Etymology of Talisman uncertaine, against Salmalius.

3. By what meanes the Power of Figures is proved: and who they are, among the Arabians, that have defended it.

4. Of certain admirable Talismans, found at Paris, and Constantinople: and what happe-ned to these Places; after the breaking of them.

5. What the Dij Averrunci of the Ancients, were. Tlatainoù whence derived: and whence the custome of setting up Figures, and Images in Ships, came.

ÇHAP.

6. The fable of the Stone Bractan, in Tur. ky, discovered: and a Conjecture given, concerning the Palladium, and the Statues mentioned by Philo Judaus.

7. The Golden Calfe, and the Brazen Ser. pent, falfely faid to be Talismans : and why the Serpent was made of Braffe, rather then of any

other Metall.

8. The Wonderfull Effects of 3. Talismans, spoken of by Scaliger, M. de Breves, and the Turkish Annals: and of what vertue these other were, that were made by Paracellus, M. Lagneau, and diverse Learned Italians.

9. The Power of these Figures proved, by the power that Resemblance is known to have, in all Arts, and Sciences: and first in Divinity. Why the Ancients placed Images in their Temples.

10. In Philosophy. Of the Power of Imagi-PAtion.

11. In Physicke. Of some Animals, Plans, and Graines, that doe good, and hurt, meerly by Resemblance.

12. In Astrology. A Certaine Meanes of foretelling Evils to come, by the Colour of the

Meteors that appeare.

13. In Physiognomy. The manner how to know the Naturall Inclination of any man, 4. cording to Campanella.

14. In the Art of Divination of Dreames. Examples, both Sacred, and Prophane, touch ing this subject.

15. In Painting. Why our Saviour Chilf is ofther pictured Suffering upon the Croffe, then Sitting at the Right hand of his Father.

16. In Musicke. Of some Diseases, that

are cured by it.

17. The manner of making these Talismans.

18. The Talismanical Operations set downe by Thebit Ben-Chorat, Trithemius, Gochlenius, Albinus Villanovensis, and Marcellus Empiricus, condemned.

19. What Power the Heavens have over

Things here below.

21. The reason of the Names of the Calestiall Images.

21. What Influence the Heavens have upon Artificiall things.

Here is nothing in the whole businesse of Philosophy, that hath more perplexed out New Philosophers, then this Subject, concerning Images, or Figures, made under some

certaine Constellations. The greatest part. of them therefore have rejected the Practice. of these Operations, as Vaine, and Superstitious: yet some others, who are not so overswayed with Passion, have both allowed, and defended it; though they have, I confesse,

suffered

suffered for it, in their repute: insomuch that Galeottus, who is acknowledged by Paulus Fovius to have been one of the most Learned. and Knowing men of his time; only for having undertaken the Defence of this Truth. (as we shall make it hereafter appeare,) hath been handled by some, like any base, Inconfiderable Fellow; and Camillus accounted no better, then an Atheisticall Wretch. And this is the usage they bestow upon all the Ablest Men: whereas they ought rather to anfwer their Arguments pertinently, and to shew the Insufficiency of them, if they can: but lee the Milchiefe of it. If any of these men chance to be in company, where there is any mention made of the most Able Schollers, or there be any Question started, concerning any of those Choyse Points of Learning, for which these men have been Deservedly ranked above the Herd of Vulgar Braines, you shall have some giddy-headed fellows, that will not flick to say, without blushing, that they never wrote any thing of any worth at all, nor ever understood the matter they handled. I my selfe have heard one say, that Marsilius Ficinus understood not any thing of Plato's Doctrine; nor Averroës of Aristotles: and that the Wits of these Times are much quicker, then those of the Ages past. And now, Reader, thou maist

judge, whether this Vanity of theirs be to be. indured, or no. But to leave these men to enjoy their owne Ignorance, and referring these Considerations to some other time, we shall only in this place prove, (against all those that have condemned them,) that the making of these Figures we here speak of, is Lawfull; and the Power they have, is Naturall, Conflant, and Certaine. In the first place therefore let us consider their Name.

2. They are called in Hebrew Maghen. that is to fay, a Scutcheon, or Sheild:in Chaldie, Ægyptian, and Perfian, צלמניא, Tfilmenaia, which fignifies a Figure, or Image: in Arabicke תלצום, Talit man, or בילשם, Talimam: and in Greek, suxtia. The Hebrew word Maghen, though it signific a Scutcheon, or any other thing, noted with Hebrew Characters, the Verme whereof is like to that of a Scutcheon: and although these Characters, according to the Opinion of those that are most versed in these Theologicall Mysteries, are some kind of Imperfect Images; yet notwithstanding the word in this place is not properly taken for an Image that is Graven, carved, or painted; because that the Jewes, in making any fuch, should have sinned against the Commandement: Thou |halt not make to thy selfe any graven Image. Maghen therefore fignifies Properly any piece of Pa-

per,

Flav.

Vopisc.

per, or other the like Matter, marked, or no. ted with certaine Characters drawne from the Tetragrammaton, or Great Name of Fowre Letters; or from any other; as we shall show hereafter. This word fignifies also, though Improperly, these very Figures also, and Images, which we speak of; because that these also, as well as the Characters of the Tetragrammaton, do terve, as it were, in stead of a Buckler, orshield of Defence, against Diseales, Lightnings, and Tempests. Chaldie word, Tsilmenaija, comes from the Hebrew T, Tfelem, which fignifies an Image: and the Arabick word, Talismam, may likewise have been derived from the same root; Talismam, being corrupted from T/alimam, by the Transposition of one letter only: But the truth of this Conjecture Wat.in is yet uncertaine. The Learned Salmasiu gives it another Derivation: for he takes an Occasion to fall fowle upon Scaliger, who derives it from the Arabick, for not considering that Talifman is derived from the Greek Word Teregue, hoc eft, laith he, Tetersouleurn, ut funt retrastuling anuli. But how can the truth of this Derivation be proved: and how shall we be affured, that Talisman comes from Tiseques and not rather Teseaus from the other! As for the last name that these Images are called by, which is solve, there is no Difficul-

my at all in the word: fo that it remaines now, that we remember, concerning these Names, that when we speake of Figures, we do not mean those, that are properly signified by the Hebrew word, Maghen, which are nothing but Scutcheons noted with Characters, such as many have seen in Paris at the Prince of Portugals; the like whereof you have in Carlo Fabri his Scudo di Christo, and in Agrippa: Lib. 1. we have elsewhere overthrown the Power of deoceult. These Kinds of Characters, and shewed the vanity of these Fooleries, which are the Issue of some Ignorant Cabalists Fantasticall Braine. Neither shall I speak at all of those Images of Waxe, which Sorcerers are wont tobaptize, in the name of BeelZebub; these are Abominations, which weabhor, although le me tell you by the way, that the greatest part of those things our Demonographers stuffe their writings withall, are nothing but meer Fables, as ridiculous as the Dreames of Our Discourse shall onely the Alcoran. be, what Naturall Power Images, that are made under certaine Constellations, may have; banishing from hence all Operations of Demons, or Spirits, and all superstitious Powers what ever.

I shall prove therefore this Power of Figures, and Images, three manner of wayes: by the Influence of the Stars : by the Power

of:

152

of Resemblance; and by Experience. I shall begin with the last of these.

3. Fifft then, it is Certain, and we cannot deny ir, without denying the most Authentick Historiographers that are, that there have been seen, both in Our dayes, and in the daies of our Fathers, some of these Talismans, or Talismanicall Figures (for so we shall now call them,) that have cured those, that have been bitten by Serpents, Scorpions, Mad Dogs, and divers other Mischances, that are but too frequent with us. The Ancient A: rabians, as Almansor, Messahala, Zahel, AlbohaZen, Haly Rhodoam, Albategnius, Homar, Zachdir, Hahamed, and Serapion give us many examples of this kind; which gave Haly occasion to conclude, that, Utilem serpentis imaginem effici posse, quando Luna Serpentem Cælestem subit, aut fæliciter aspicit: Similiter Scorpionis effigiem efficacem, quando Scorpij signum Luna ingreditur, &c. Neither did he deliver this Doctrine, without having had Experence of the Effects: for he affirmes, that himselfe, being in Agypt, had in his hand one of these Images of a Scorpion, which did cure those that were stung by this Venomous Beast: and it was ingraven upon Bezahar, or, as it is commonly called, a Be-Zar-Itone. It will be objected perhaps, that these Arabians are Trifling, Vaine Writers;

and therefore that there is little credit to be given to them. But I shall elsewhere undertake the Vindication of them from this Calumny; and shall at present, for the satisfaction of Self-willed men, forbear to cite them any further; but shall content my self with Examples borrowed from fuch among the Greeks, and Latines, as are accounted most Authentique.

Unheard-of Curiosities.

Gregorius Turonensis, besides an infinite In Hist. number of Rarities which he reports of France. France, saies; that when they were sometime digging in the bridge at Paris, there was found a peice of Copper, whereon was to be seen the Figure of a Rat, of a Serpent, and of a Fire: which being afterwards neglected, and peradventure either broken to pieces, or some way or other spoiled, there was observed in a very short time after, a great number of Serpents, and Rats to haunt the City; and they doe greatly annoy it still: and we cannot, without grief, call to mind, the many great Losses the City hath fince that time endured by Fire: all which Sad Accidents were never heard of here, before the taking up of this Strange Plate of Copper.

It is also reported, that after that Maho- camerar. met the Second had possessed himself of tib.3.cap. Constantinople, the breaking of the Lower 20.

Jaw of a Brazen Serpent, was the cause of the increasing of Serpents in those Parts, So true it is, that these Talismans have Power to divert many of those Calamities, that afflict Mankind. And who knowes not, that by the means of These, the Learned men of the Ages past have oft-times chaced away Infects out of their Cities, and chil. 3. fields; as Gnats, Locusts, and Caterpillers? Cité an. If any desire to see some of these Examples, he may have recourse to the Chiliads of Fohn Tzetzes; where this Greek Author, (who lived about the time of that Excellent Historian Anna Comnena, daughter to the Emperour Alexius Comnenus,) reports, that Apollonius, by making a Talisman of a Stork, kept these Troublesome Birds from comming into Constantinople; and by another Talisman, he drove away all the Gnats You may also see Ptoloout of Antioch. Aphor. 9. mics Centiloquium, and the Commentary of AdMarc. Abre Gefar, falfly attributed to Haly, as it is Felf. E- observed by Scaliger.

Furthermore, I am of Opinion, that the EtimMa- First Gods of the Latines, which they called Averrunci, or Dif Tutelares, were noother then these Talismanical Images: and I ground this my Conjecture from hence, that there are some Historians that affirm, that they made some of these Tutelar Gods, under

under certain Constellations: but the poyfon of Idolatry having infected the best of Sciences, was the cause, that, these Images being afterwards taken for Gods, the true, and legitimate manner of making them was smothered, and quite lost. They were wont also to set up some of these Talismans upon the Prow of their Ships, to preferve them from Shipwrack: and all this to be done Naturally too; seeing that a Falifman may be made, under the Sign of Pisces, that may, for some certain time, render the Waters Calm, and free from Tempests. The Greeks, (as Helychius, and Herodotus, called thele Figures,) let up in Ships, marands: a word, no doubt, borrowed from the Hebrew Pitochim, which fignifies as much as Calatura: and therefore the Chaldie Paraphrase renders it, by this our אלמניא Tilmenaija. Now we are to take notice, that these Figures were not at all of any Humane form, but of some Coelestiall Figure, or other; which confirmes me in the Beliefe, that they were reall Talismans. Neverthelesse the Mariners had also their Statues of some Deity or other, as of Mars, Apollo, Venus, Mercury, and the like; which they placed at the Poop, or hinder part of their Ships: whence Virgil faics:

Aurato

-Anrato fulgebat Apolline puppis. And Persius:

156

Vid.

Pbil.

-Facet ipse in littore, & una Ingentes de puppe Dei.

Which gave occasion to the Poets to seign, that Fupiter stole away Europa, under the shape of a Bull; because the Ship of the Cretians, who stole her away, had, for it's Talisman, the Figure of the Coelestiall Sign Taurus, and, for it's Deity, a Statue of Jupiter. The like Original might, probably, that other Fable of Ganimed have had; who is faid to have been carried away by an Eagle, the Bird Proper to the same God. You may see further, concerning this Particular, in Sextus Pompeius, lib. de Europa, Cap. 11. and Lactantius, lib. de Falfa Religione. This custome of Mariners setting up of these Talismans, or Images, in their Vessels, against Shipwracks, is so Ancient, that they say, that among those that came with Aneas from Troy, there was One that had the Figure of two Lions: that the Gadarenes had one, with the Image of a Horse: and that the Ship of Alexandria, which St. Paul failed in had the Images of Caftor and Pollux, or, according to the Arabians, the Gemini graved on it: and that which carried Hippocrates, when he took his journey to Abdera, for the curing of Democritus, bare the Figure of the Sun. Now all these Talifmans were not made so much for the avoiding of Shipwrack only, as for the turning away of some other Disastrous Accidents, or the procuring of some good Fortune, And from this practile of the or other. Ancients have the Christians taken Example, though in a Christian way, of having Images in their Vessels, and Picturing in them the Saints whose names they bear.

6. But fince that I am unawares fallen upon this Choise Piece of Antiquity, I shall here further adde, that these Talismans were not fet up in Cities only, and Ships, but also in the plaine, open Fields too: and it may be, that that Stone so much famed among the Turks, which they call Brattan, and is let up at Mecha, being four foot long, and avo foot broad, as Suidas reports, was only a Talisman. For otherwise we must even content our selves with Turkish Fables, and believe, that it would never have been fo highly prized by them, but for that it served instead of a Bedto Abraham, when he had knowledge of his Maid Hagar: For, besides that this is ridiculous, the Turkes will never acknowledge themselves to be Bastards, and descended from a Servant-maid; but from Sarah: and this is the reason, that

In Pa-

nopl.

Syntag.

2.64.

they are so much delighted in being called Sarafins. Others fay, that the reason why the Turks have this Stone in so much Veneration; is, because that Abraham tyed his Camell to it, when he went up to the top of the Mountaine to facrifice his sonne; as Exthymlus Zigabenus affirmes : or, as some others of the more Trifling fort of the Arabian Writers will have it, because it was erested in memory of a certaine Holy Woman, who was taken up into Heaven, and afterward honoured upon Earth as a Goddefie, for having very charitably entertained the Angels Arot, and Marot. That which moved these later to forge these Fables, was the Figure of Venus, which is ingraved upon this Stone, with a Crescent: and this is that which makes me beleeve, that it was a Talisman of this Planet, which, as Mr. Selden sayes, was anciently taken, throughout all Asia, for the Moon. And for this Caule it is, that this People hath Friday in the same Veneration, that Sunday is with us and that, in memory of this Starre, which all the Afrans worshipped, the ridges of their Houses, and tops of their Temples were adorned with litle Grescents, as ours are with Croffes. Now it cannot be thought, that this Stone was onely a bare, simple Image, erected in honour of Venus: for,

for, besides that it was placed in the Open Fields, and not within any Temple, it had that Vertue, which no other Image of this Goddesse ever had. For it drave away, faith Zachder, all Venomous Beasts, and rendered all the neighbouring Fields both Happy, and Fruitfull: which is so farre from being observed in them at this day, that, on the contrary, they are all utterly barren. And this agrees excellently well with the Nature of these Talismans, whose Operation lasteth but for some certaine space of time; as Albertus Magnus assures us. Non lateat nos, De Mifaith he, quod situt virtutes Naturales perdurant in quodam tempore, & non ultrà; ita eliam est de virtutibus Imaginum. Non enim influit aliqua virtus de cælo, nisi quodam tempore periodi; posted cassa & inutilis remanet Imago frigida & mortua. Et hac est canla, quare quadam Imagines non operantur hoc tempore, quod fecerunt tempore antiquo. From the diversity of Opinions concerning this Talismanicall Stone, it may be judged how many Fabulous Stories have been raised touching those Artificiall Images; as namely, of those which were called zronged dui, which were broken to pieces by the Latines, at their entring into Constantinople: of the Palladium, of which there are so many Wonders reported, and which perhaps was nothing

Unheard-of Curiofities.

Biblic.

thing else but a Talisman: of those Images of the Amorhites, which, as Philo Judaus reports, were called Nympha sacra, which shewed to their slaves hourely, what soever they were to do: and, which being at last quite decayed, an Angel of the Lord, (feeing they could neither be broken to pie. ces, nor burntin the Fire) tooke, and cast into a Bottomelesse Pit. Fine fooleries these; And here, Reader, thou art to take notice, that the Greeks were the first, that surned these Truths into Fables: for having lighted on some of these Images, that had beene made long before, and leeing them to have fuch Admirable, Strange Vertues in them; being unable to apprehend the reason of these things, they presently betook themselves to forging of Old, Ridiculous stories of These, as they have done of All Other things, the truth whereof they understood not.

7. And here, two Questions may beasked: the First is, whether the Holy Scriptures make any mention of these Talismanicall Figures, or not : and the Second ; when they were first Invented; and by whom?

To the First of these I answere, that as in none of the Translations, so neither in the Originall Hebrew is the name of these Talismans found: although there are of those

men that attribute all things to the Power of Nature onely; as Atheists do, who stick not to affirme, that the Brasen Serpent, set up by Moses in the Wildernesse, was but a meere Talisman, which drove away Serpents, and healed the bitings of them. But this their Opinion is confuted by this; that the Matter, of which a Talisman is made, must not be any whit contrary to the Nature of the Griefe which it is to cure. Now all the Rabbins, who have treated upon this Vil. History, affirme, that, according to the O. Bibl.come. pinion of all the Naturalists, there is nothing col. 2. more contrary to those that are bitten by Vi- in Igno. pers, then to touch, or look upon Copper: 5. Grue. so that this should have added to the Israelites Torment, and more invenomed their Wound, rather then have cured them. And this was the reason perhaps, why God commanded Moses to make a Serpent of Brasse, rather then of Any Other Metall; that so this Incredulous People might know, that seeing that God cured them by a Remedy, quite contrary to their Disease; he was able as well to bring them safely into the place, to which they despaired of ever arriving. And here by the way. I cannot excuse Marfilius Ficinus, who without any ground at all hath charged the Rabbins with having a beliefe, that their Forefathers made the Gol-

den Calfe in the Wildernesse, to no other end, then to serve as a Talisman, forthe diverting of the Influences of Mars, and Scorpio, which are Adverse to them. He. De vit. brai quoque, saith he, in Egypto nutriti. fruere vitulum aureum aidicerant, ut corundem comp.1.3. Astrologi putant, ad aucupandum Veneris, Lunaque favorem, contra Scorpionis, atque Martis influxum, Judais infestum. Bu this is idle.

To the second Question, I answere, that it will require the Spirit of Divination, to assigne the first Invention of these Talismanicall Images to its right Author: yet it cannot be denied but that the Persians, or, if you will, the Babylonians, or Chaldeans were the First that found them out; as you may see in R. Moses his Ductor Dubiorum, where he tels us, that the Ægyptians, and their Neighbours, whom he cals, Gens Zabirrum, Cazedim, & Aranim, learnt this Do-Arine of them. And though wee had no other testimony but this, that throughout the whole Eastern part of the Worldthere are yet to be seen some of these Talisman, which are very Ancient ones; it wouldb: an undeniable Argument, that the Eastern Men were the First Inventers of them.

8. Some of those Talismans have now quite lost their Vertue, as namely, that Leaden

Leaden one, which was made by Arbined Ben-Tolon, Caliph. of Egypt Which Whate away Crocodiles ; as Julius Stabler Hath Exercit; observed : as also those that have beene 186. communicated unto Me by MF. da Val. a man very excellently well skilled in these Curiofities, and whose Closer affords a vast number of them. I am now upon eaufing the choylest of his Talismans to be cut in Braffe; and it had been done long cre this, had I not expected some which Mr. de Pegresc hath promised me. I am informed also, that M. Pontus of Lyon hath some few of thele; which I shall also endeavour to procure, that I may joyne them with those, which are promifed to be fent mee, out of Italy, and Germany; and if I shall flinde that they are right, I intend to publish them with World, and to discover This Secret. which all the Learned do either bewail, as a Thing Lost to the World; or else, as of extreame Difficulty: and shall also shew, how that all those, that have made any of these Figures, have mixed fuch Superstitions with it, as are indeed justly condemned.

Now some of these Talismans are yet of as much Vertue, as they were at first: witnesse that which is spoken of by the Arabicke Cosmographer, (who is a very Authenticke Writer,) and is cited by Foseph Scaliger. Vaget.

This Talisman, he saith, is to bee seen in the Country of Hamptz, in a City bearing the same Name; and it is onely the Figure of a Scorpion, graved upon one of the Stones in a certain Tower; which is of so great Vertue, as that it suffers not any either Serpent or Scorpion, to come within the City. And if any one, for Experiment Sake, bring one of the field into the city; it is no sooner at the gate, but that it dies suddenly. This Figure hath this Vertue besides; that when any one is stung by a Scorpion, or bitten by any other Serpent; they need but take the Image of the Stone with a link Clay, and apply it to the Wound, and it is instantly healed. If any one doubt of the Pag. 33. credit of this Cosmographer, he may yet adventure to beleeve Mr. de Breves, as having been an Eye-witnesse of the like experiment: Who fayes, in his Travels, that at Tripo-, li, a City of Syria, within a wall, that ightharpoonup reacheth from the Sea-side to the gate of , the Citie, there is a certaine Inchanted , Stone, on which is figured, in Reliefe, or , by way of Imbossement, the figure of a 5, Scorpion; which was there placed by a , Magician, for to drive away Venomous ,, beasts, which infested this Province; as the Scrpent of Braffe, in the Hippodromus, at 35 Constantinople; did. And a httle above

, the City, there is a certaine Cave, which "is full of the Carkasses, and bones of "Serpents which dyed at that time. These are his owne words, translated. Now whereas he calls this an Inchanted stone, and faics, that it was placed there by a Magician; you must note, that he there speakes according to the Sense of the Inhabitants, who knew not how to give any other account of the thing; as not understanding any thing at all of the Naturall reason of it; as we have fayd. At ByZantium, which is now Constantinople, there were many of these Talifmanicall Figures to be seen: but the fury of War hath demolished them all, to the great Prejudice of the Inhabitants. Sultan Mahumet also caused one of them to be broken to peices, which was a Brazen Horfe, with a Horseman upon him; which is certainly reported to have preserved the City from Pestilence, and all Contagion of the Aire: but fince that time, this Disease hath raged so fiercely, as that in the space of foure Months, Leunclavius, who was present, affirmes, that there died a Hundred and fifty Thousand Annot. persons: and every yeare, in the Months of in Annat. Turc. July, and August, the like Effect, in a man-num, 139 ner, is to be seen. In a word, all Asia was full of these Figures; the Use whereof was at length, knowne to the Europeans also:

M 3

IOr

In Bafil.

Phillo .

for the Druides, as the learned Frey reports, used these Talismans with good successe; and Galliar. even our Grandfathers have affured us, that & in his it was an Ancient Tradition; that where the which he Fairies, the Druides Wives, inhabited, there, cals Au-neither Haile, nor Stormes ever spoiled the tiquissi- Fruits. And the reason, in my opinion, was; because they used to make of these Talismans. Now of late, many Learned men have refcued from Oblivion these Figures; de Drui- and Paracellus did take so much paines herein, as that he made diverse of them; and those fuch Vertue, as that they preserved those that wore them, from the Pestilence; as, many in Germany have had experience of. And rhar I may not wander far abroad, I am informed that for certaine, Mr. Laneau preletved from this Disease, all those to whom he gave any of these Talismans; which he made, according to Those, described by Marsilius Fi-Those also which Paracellus cals Zenexton, by a Made Name, (it being the custome of this Author, to devise New Words,) are made with exceeding great Art. In one of them there is a Scorpion, and a Serpent figured: and he faith it must be made, when the Sun, and the Moon enter into the Signe of Scorpio. In another you have a great number of little Holes, within an Oval-You may see the Figures of them, in the Chmicall workes of Crollius.

It may be here Objected, that this Author, whose practice we have alleadged, was a Suspected person; and that his Writings are not free from Magick. This Objection I shall take occasion to answer, at another time; and shall at present produce such Figures only, as have been made by men; that are be-

yond all Exception.

functin, upon the Sphear of Sacrobasco, affirmes, that his Master, who was a Carmelite, named Julianus Ristorius a Prato, one that was not any whit superstitious, was intreated by a Friend of his, to make one of these Images, for the cure of the Cramp, which he was very much subject to. This Learned man, resenting his Friends sufferings, taught him the manner how to make one : fo that He, not content to make only one; made divers of them, when the Moon was in the Sign Cancer; and that with so good successe, and with such certainty, as that he immediately found the benefit of it. Confecit, saith he, plures imagines, prose, & amicis suis : quibus effectis, unam pro se accepit, & liberatus est. The same he reports of a certain Florentine, a very Pious man; who made one of these Talismans; for to drive away the Gnats; which he did with good successe. Nocolaus Florentinus, saith he, vir religio-1455 M 4

sus, fecit in una constellatione annulum, ad expellendum Culices, quas vulgo Zanzaras dicimus, sub certis et determinatis imaginibus; et usus fuit constellatione Saturni infortunati, & expulit Culices. What more can be faid, both for the Innocence, and Power of these Figures ? Let who will condemne those that defend this Truth, and cry down these Testimonies : for my pan, I shall ever acknowledge them to be both Certain; and Naturall; and do withall protest, that I see nothing in it, that is above the Power of Nature.

The Second Meanes which I have propoled to my self to use, for the proving of the Power of these Figures, is, the Power and Vertue of the Resemblance that there is, betwixt the Scorpion, and its Image, and the Constellation that bears the name of this Living Creature. I shall then prove this Vertue, by an Induction of that, which Refemblance alone produceth, throughout all Arts and Sciences, as Divinity, Philosophy, Physicke , Astrology , Physiognomy , Divination of Dreames, Painting, Sculpture, Musicke, oc.

9. Those then, that are well skilled in the Secrets of the Theology of the Ancients, assure us, that those that first set up Imacup. 28. gcs in their Temples, resembling the shapes

of Angels that have appeared upon Earth, had no other delign in so doing, save only the more easily to invite down those Blessed Spirits, by the force of the Resemblance. And I know not whether of no, by the very same Vertue of Resemblance, which is found betwixt God and Men; (Faciamus hominem ad imaginem, & similitudinem nofram:) it hath not rightly been affirmed by some Divines, that the Sonne of God would nevertheless have become man, (yet without fuffering death,) though Adam had never fallen. But speaking of things, as they are now at present, we know, that Fejus Christ is found in the midst of those, that speak, with Faith, of his Name: because that when we speak with Affection of any One, we represent him to our selves in our Imagination. When therefore, speaking of Fe-[us Christ, we fancy him as he is; he is initantly prefent with us, appearing to our Hearts at that very Instant, that we There trame his Image by our Imagination. true it is, that Resemblance hath the Power to work Wonders, even upon him that hath Dependance upon no other, and is not under any Power, or Law. But such Conceptions as these are to be entertained with all Piety, and Humility; and proposed with luch Sanctity, as becomes those that speak of 10 Adorable a Subject. 10. Phi-

Philosophy also lets us see the Verrue of this Refemblance, in the businesse of the Imagination. For if a woman with Child did but flyongly fix her Imagination upon any. Object, during the Act of Copulation, the Child will assuredly bear the perfect Image of the same. Every Child knowes the Story of the Princelle, that conceived and brought forth a Black-Moore, though her felf and her husband were both of them Fair, only, because there was a Moore pictured on the Testern of the Bed. So if the Mother in the Ad, either strongly Fancy Robbing, Killing, or Love, the Child will be either a Theefe, Murtherer, or an Amorous person: if the fancy Travelling, he will be a Traveller; if Dancing, or playing on the Lute, he will be very Apt for These Things; and so of the rest. And we see by daily experience, the Effects of the strong Desires, and Longings of Mothers, during the time of their being with Child, upon their Children, on whom the strength of their Imagination had imprinted the Resemblance of the same thing that they have defired. And hence they fay it is, that the Children that are got upon a Married Woman, by some Other Man then her own Husband, shall notwithstanding have the Perfect Resemblance of her

her Husband; because that, during the Act of Generation, her Mind still runs on Him, searing less he should come, and catch them at it. See what we have said, at the end of the precedent Chapter, touching these Marks, caused by the Imagination; and how they were presently affected, upon the Parties eating that, which they bare the Resemblance of. You may further see the wonderfull effects caused by the power of the Imagination, learnedly discoursed on, by Paracelsus, Marsilius Ficinus, Picus Mirandula, Tostatus, Valesus, and Medina.

11. Physick likewise observes the Ad-Lib.2. de mirable Effects, caused by Resemblance: Morb. inwinels those Herbs, which allwage the griefes Lib.13. of those parts of our body, whose Image de Theoli they bear, (as we have already faid:) or De Imaelse which cure those Diseases, whose figure, gmar. Thus Lentills, and In Gen. or colour they bear. Rape-seed cure the small pox in Children; De Sac. because that the Grains are like to the spots Phis.c. of this Disease. And Rhubarb, which is of Derett in a yellow colour, expels Choler, which is of Deton the same colour. In a word, those Plants side of 7. which are Barren, or Fruitfull, as Porta faith, do render those that use them, Barren, or Fruitfull: the Faire, makes them Faire, the Deformed, make them Deformed; the Imperfect, make them imperfect: so that he

Phylogn. concludes, with Theophrastus; Accedunt stir-8, 9,6 pium aliquot genera deficientium, vel folio, vel radice, vel alijs partibus, eademque ratione membris illis nostri corporis respondentibus, infesta, noxiaque sunt. The same he also affirms of Living Creatures. ratione ad animalia transeundo, si aliquibus membris defiçisse videmus, eadem membris no-For which reason, the stris adversantur. eating of those Creatures which have no bloud, does wast ours; and so of all the other parts. And it is observed, that in France there are more Lepers, then in any other Kingdome, by reason of the great store of Hogs-stell that is eaten there: So true it is, that our bodies become like unto that, which we use to feed on. this reason also is Hercules said to have been very strong, because he fed upon the Marrow of Lions, the strongest among Beasts. Astrology also shewes the Verme the Child, by those of the Stars.

of Resemblance, judging of the Qualities of For Mars casting forth a glittering, red light, makes the Child that is borne under its Influence, of a red colour also. Saturn, who is of a pale, faint colour, makes him pale, and Fupiter, and Venus, which calt forth bright, cleare, and pleasant beames, makes the Child beautifull, and pleasant.

The like is observed also in other Qualities: fother, if the Signes be High, and in their Apogaum, the Child (say the Arabians) shall be in like manner of a Tall, and Great Stature: if they are Low, he shall be Low, and of a little Stature. As concerning Motion, Saturne, which hath a flow, and Heavy one. makes the Child likewise Heavy and Lazy: the Moon, which hath a Swift Motion, makes him Light, and Inconsiderate. You may have the fuller profecution of this Discourse. in thole two Learned Italians, Cardan, and De cent. Porta: who confidently affirme, that a man genit loca may likewise foretell certainly, any other the cit. like Qualities that a Child shall be subject to. by the Figures, and other Qualities of the Meteors. Thus a man may conclude, that we shall see Armies, Battels, and Wars break forth, after that Launces of Fire, Swords, Trumpets, and Bucklers have been feen to appeare in the Aire: And chiefly; when a Comet hath appeared; of which it is usually laid, Nunquam impune visus Cometa. And 10 likewise we may conclude, there will be great Effusion of Blood, if all these Meteors are Redder then Ordinary: or, when the Sun. and Moon, in the time of an Eclipse, seeme bloody. And if they be Pale, and Wanne, and of a dead colour, we may conclude there will follow great Mortality by the Pestilence.

lence; which makes those, that are infected with it, pale, wanne, and colourlesse.

13. Physiognomy likewise shews us most Prodigious Effects of Resemblance, and of Figures. For if a man endeavour to counterfet any other mans Countenance, and that he fancy himselfe to have His haire, eyes, nose, mouth, and all other parts like Him; and, in a word, if he imagine himselfe to be like him in his Physiognomy; he may by this meands come to know, what his Naturall Inclinations, and what his Thoughts are, by the fame, which he finds in Himfelfe; during the time of this his Making of Faces. This Opinion is grounded upon the Experience Es senju of Campanella, who expresseth himselfe in rerum & these words. Cum quis hominem videt, flatim imaginari oportet; fc nasum habere,, st alter habet et plum, & vultum, & frontem, & locutionem: et tunc qui affectus, et cogitationes in hac cogitatione illi obrepunt; judicat homini illi esse proprios, quem îta imaginando contuetur. Hoc non absque ratione & Experientia. Spiritus enim format corpus, a juxta affectus innatos iplum fingit, exprimit que. I alwaies thought, that the opinion of Campanella was, that a man should only 1snagine himselfe to have the same Countenance with the Other; as his words feem to mean: but when I was at Rome , understanding that

he was brought into the Inquisition. I did. out of Curiofity to be satisfied in this Particular, take the paines to visit him there. Being therefore in the company of some Abbots, we were brought to the Chamber where he was: who, as foon as he perceived us, came to us, and intreated us to have a little patience, til he had ended a little Note, which hee was writing to Cardinall Magalotic. When we were fate down, we observed him oftentimes to make certain wry Faces; which we conceived to proceed, either from folly; or else from some Pain, that the Violence of the Torments, which he had endured. put him too: the calves of his Legs being all beaten black and blew, and his buttocks having hardly any Flesh on them; it having beene torne from him piece-meale, to the end they might force him to confesse the Crimes that he was accused of. But a Learned German will shortly publish the History of his Life, and Misfortunes. To returne then to our purpose, one of our company, amongst other discourse, asking him, if he felt no pain: He, smiling, answered, No. And supposing that we had been something. troubled at the Wry Faces which he made, he told us; that, at our comming in, he fancied himself to be Cardinal Magaloti, as he had heard him described and he asked Us withall,

176

withall, if he were not a very hairy man, Now, I, who had before read that Passage in his Book, which I have before set down presently conceaved, that these Wry Faces are altogether Necessary, for to be able to judge aright of another mans Naturall Inclination. I shall not here set down what passed betwixt us, in this Interview; because it is wholly besides my present Subject I shall now therefore rerurne to the Effects which are found in Physiognomy, and are produced by the force of Resemblance. We fee then by experience, and all knowing Physiognomists have observed it; that if a man have a Round Forehead, he is very subject to Folly, and Lightnesse, being very easily moved any way; in like manner as a Round Figure is the most apt for motion ? and the Naturall reason of this, is, because that the Spirits ascending up, and meeting with a place of a Round Figure, they are very easily moved any way. It is also observed, that those that have a Sharp Chin, that stands forward, and a little Forehead, are very Brutish, and Stupid: in a Word, they are qualited like a Hog, whose image they in a manner bear. And without troubling my selfe any further with bringing in Instances of this nature; you may have recourse to the Physiognomists, who will furnish you with

good

good store of them: by which you will be able to judge, how great the Vertue, and Power is of Resemblance, and Figures.

14. The Art of Divination of Dreames isalio grounded upon Resemblance, as may appear out of the Holy Bible; where Foseph Gen. 40% foretold the Cupbearer, that within three dayes he should be restored to his office again: because he had dreamed; that he pressed three clusters of grapes into Pharaohs Cup. But he foretold the Baker, that after three dayes he should be hanged, and his Flesh should be eaten by the birds of the Air, because that He also had dreamed, that he barethree baskets full; and that the birds eat up all that was in them. He foretold also the seven years of Plenty, and the seven years of dearth, by the seven Far Kine, and the seven Lean Ones; and by the seven Full ears of Corn, and the seven Thin ones; according as Pharaoh had dreamed. Prophane Histories also affoard us many Examples of this kind, proving the power of Similitudes. For Hecuba, being with Child, dreamed that she was delivered of a Firebrand, which burnt up her Kingdome : and this was Paris, who was afterwards the cause of the burning of Troy down to the ground. I shall here adde moreover, that this Resemblance of Dreames hath oftentimes been so powerfull,

as that, what one hath dreamed, he hath afterward seen really come to passe. Thus Plin. lib. Cornelius Ruffus, dreaming that he had loft 7:6.50 his fight, became shortly after quite blind. A like story to this is related by Galen, in his book, De Prajag. ex Infomn. Andthe Reader may have recourse to those. Authors, that have written of this Subject; as Nicephorus, Salomon Judaus, Synesius, Plato, Cicero, Valerius Maximus, Cardan, and Artemiderus; who have examined all that Chrysippus, Antipater, Artemones, Famblichus, Aristides, ApomaZar the Arabian, and Scirnachan the Indian have faid concerning this Particular.

> 15. Painting and Sculpture do also wonderfully confirme this Power of Figures; for as much as those that are Sad, and Weeping Pieces, do make us fo fad, as that they iometimes draw Tears from our Eyes; and the Merry, and Cheerfull Pieces, makeus Joyfull, and cause us to laugh. And this is the realon, why these Later are very seldon made use of in Holy matters; and the Former Sort are so Frequent in our Churches, where we shall oftner find Felus Christ plan red on the Crosse, then Rising from the Dead; or, Sitting at the right hand of M Father : because that , besides that the Pan ting him in that Posture, puts us in min

both of our Redemption, and of his Love. towards us, who being Immortall, would yet become Man, that so he might be in a Capacity to Die for Us; it also moves us, by. the Vertue of Relemblance, to be fad, as It is: fo great is the power it hath over us. Eft enim Similitudo, saith Porta, pictus sermo, vel. pictura loquens, que quovis sermone, quibusve

notis Valentior est.

16. Lastly, the secret Vertues of Resemblance, and of Figures, appear as well in Muficke, as in any other of the Sciences. Thus it is storied of Timotheus the Musician, that by the Diversity of Voices, and Tones, which he ordered according to the severall kinds of Humors, he was able to raile up in a man any fort of Passion that he pleased. And we find by daily Experience, that Merry fongs make vid. Se-Us Merry, and sad ones, make us Melan-nec. lib. choly. The Musick of the Lydians, as Plato 3.de Ira, reports, being very Effeminate, made the 1,28,c,2, Hearers also Effeminate: on the contrary, Corn. that of the Phrygians made men Couragi- 13.6.18. ous, Manlike, and Undaunted. I shall not here set downe, what some have delivered, of the Power that Musick hath in the Curing of Diseases, only by the Harmony, and Proportionable mixture of Tones; as it is reported of: Pythagoras, who is said to have cured Mad men; as Terpander did, those that were Deaf;

and

See the

and Damon, those that were Drunke. As for learned Musicall Instruments, it is most Certain, Ferrei- that we may make diverse of them found tocurand. gether, without touching them; provided that rationem they be all Exactly Tuned to the same Pitch, and Tone, that That other is, which a man shall play on: And although the sound of the others will be very Faint, and hardly percevable to the sense; yet you shall plainly perceive the Motion that the Strings do make, if you lay but a feather, or some other such light thing upon them. How Admirable then is this Resemblance, which doth every where produce such wonderfull Effects! Quidnam hic efficit, saith Marsilius Ficinus, ut Cithara subitò patiatur à Cithara, nisi situs aliquis, el quadam Figura conformis?

If then Resemblance hath so great Power, in all those things which we have now shew ed; we may very safely conclude, that it can have no lesse in that of Talismanicall Figures; and this we may be the more Confident of, fince we are confirmed herein by Experience

it selfe.

It now remaines, that we prove this Power to be Naturall, by the Third means which we proposed; namely, by the Vertue of the Stars. And this we shall very easily be able to doe, after we have first shewed the manner, which the more Learned fort do observe, in preparing these Images: I say, the more Learned fort; because I know very wel, that many are not so Accurate in their Obfervations; as we shall shew hereafter; although they doe notwithstanding sometimes find the Effect answer their desires; but it is after a longer time, then otherwise it would

17. First of all then, they usually propose to themselves, what Effect they would have these Images produce; whether to chase away. some Hurtfull Beasts; or, to allay the violence of Winds; to prevent Lightnings, and Haile; to cure certain Diseases, and the like. This being first proposed, they then search after the Meanes, that may be proper for the attaining to the End Proposed : as, for Ex-, ample, for the Cure of the Dropsie, it is to be confidered, that the Disease confists in Moulture: they are therefore not to take any Matter indifferently, for to ingrave, and forme, under such and such Constellations; but it must be something, that is of a substance Naturally Hot, and Dry. Secondly, they must take, for the Ascendent, some Sign that is likewise Hot and Dry; as Aires, for instance, is said to be. In the Third place, they must make choyce of some Starre, to which this Malady is subject; such as Saturne is faid to be: but there being need also of some Star

Parcelf. 74 Paragram.

182

Starre that is very mouft, (to the end that Sympathy, which is so powerfull in all things, may affift also in this particular;) they may take the Moon in her Wane. For, as the Curing of the Biting of a Viper, they mixe some of Its slesh, with the Antidote; in like manner, for the expelling of these Waterish Humors, we must make use of that Star, which hath the greatest Affinity with the Waters. You must also observe the Sign, which relates to the part of the body that is ill-affected: and this is the Counsell of a learned Physician, who saies, that; Oportet Medicum absque defectu scire, ubi cauda Draconis sit in homine, ubi Aries, ubi Axis Polaris, ubi sit linea Meridionalis, ubi Oriens, ubi Occidens, &c. Now that the Signes have more Agreement with, and have stronger Influence upon one part of the body, then another; we are certainly taught by daily Experience, in the curing of Wounds. We must also have regard, if it be possible, to the Stars to which the Sicke person is subject: and then in the last place, we must above all things take care to begin our Work, under some certaine Aspects, which are only useful in the Operation, iome for to flied their Influences with more Heat, or Cold; and others, with leffe; as occasson shall require. So that all things being thus diligently observed, the Beames of the Stars,

Stars, finding a Figure aptly disposed for the receiving them, do make such an Impression init, by the Resemblance and Harmony that they there find, as that being once taken in, they doe afterwards Operate on that which they finde to be semblable. In all the other Operations, they proceede after the same manner: as, for Example, to chase away Scorpions out of any place, they take the Signe, with which they have some Correspondence; such as is the Signe Scorpio: then doe they take some Malignant starre, which is Adverse to them; it being not so necessary to observe so many rules in Beasts, and other Irrationall Creatures, as in Men. Now when the Figure of a Scorpion is thus prepared, the Living Scorpions feeling naturally the Offensive Influence, wherewith the Image is indued; they presently avoid the place, for their owne preservation; or else, if they be too neare it, they presently dye. It it be thought by any a Hard thing to conceive, how these Living Creatures should have any sense of this Influence; let them but consider, that there are some Persons that beare so strange a hatred to Cats, or other like Beasts, as that if there be any within the house where they are, they doe prefently fall into a Sweating, and Trembling, although they see them not. It is reported allo,

also, that there is a certain Hearb, that Cats will sent at a very great distance: insomuch that, if one lay it upon the top of a House, or in a Chamber, you shall have them come from very far, to tumble, and roule themselves on it. Many things are delivered by the Naturalists, which are in appearance much more Incredible then These. It therefore now remains only, that I answer three Doubts which are proposed; namely, Whether the Starres have any Influence upon things here below, or not? Whether they have any Resemblance with them? And, Whether Artificiall Figures can retaine their Influences, and afterwards Operate by them : as we have

But first of all I must lay down 18. this, for a most certain Conclusion, and Foundation; That the Stars, and their Influences in these Figures, have no Power at all over our Wills. And therefore do I account, as Ridiculous, Damnable, and Scandalous, those Operations, which Albinus Villanovensis saies, may be effected by means In Magia, of these Images:

Aftr.

Ad fugandos latrones. Ut Mulieres transeuntes super imaginem, ndeant & cantent. Ad sistendum equum in cursu. Ad

Vid infra cap. 7.

Ad expugnandos hostes, &c.

- Adrecipiendam substantiam ablatam.

and many Denib. others: to which we may adde those of The- Imagin. hit Ben-Chorat; and the greatest part of Magic. those of Trithemius, and of Gochlenius; the veter-so-Invention whereof we doe utterly reject, and gill. condemn the Practife, as being Vain, and of De sigilno Effect at all; as well as those of Mar-lin cellus Empiricus, who saics, that to cure the Pain that is bred in the Gut, which is called Colum, which passeth from the Right Kid- Comney to the Left, and goeth along by the monly bottome of the Stomack, you must make called the a Talisman of a thin place of Gold, and ingrave on it these following Characters. But first, if you have but a mind to be merry a little, take notice of these his Observations. The plate of Gold must be graved with an Instrument pointed with the same Mettall, and when the Moon is twenty daies old. And when it is graved, it must be put into a little pipe of Gold, covered at the top with goats skin, and then it must be tied with a thong of the same leather to the Right, or Left foot of the Patient, according to the fide he is pained on. And he that is to use this Remedy, must not have any knowledge of a Woman, especially of a woman with Child: and he must

be fure not to goe among Tombs, or And lastly, he must above all take care to put on his left shooe, before his right. You shall hear this Author speak inhis own words; and that more impertinently, and superstitiously, then any that ever handled this subject, which hath been so much cried down, (meerly for the many Fooleries that have been mixed with it,) by people that would never take the pains to make choyleof the Good, and let the Bad alone. Medicam faith he, utitur quis hoc praligamine abstineat Venere; & ne mulierem, aut pragnantem contingat, nec Sepulchrum ingrediatur, omni-Ad ipsum autem Coli no servare debebit. dolorem penitus evitandum, ut sinistrum pedem semper priùs galciet observabit. The rest is too long, and too ridiculous to be inferred here. The Characters of this Superstitions

> L. MORIA L. MORIA L. MORIA L. MORIA

Talisman, which I produce for no other rea-

son, then that the Reader may be able to distinguish, with me, betwixt the False, and the True ones, are These, here set down.

And now it is no hard matter to conceive. how the Power of Talismans comes at this day to be so undervalued; for those that have written of this Subject, have mixed so many both Confused, and Dangerous things together in their writings; that people making no distinction at all betwixt the Good and the Bad, do equally abhor all, what soever beares but the very name of Figure, or Talisman. But we shall, in the profecution of this Discourse, sever the good Corn from the Darnell, and shall shew, that, in the Making of these Figures, all words are indifferent; and that they serve but to amuse the simpler sort of people. As,. when Albinus Villanovensis saies, that for to cure the Tertian, and Quartan Ague, the pain of the Nerves, Ventricle, and Privy pairs, you must grave the Image of a Scorpion upon a piece of Gold, or Silver, when the Sun is in his proper House, and the Moone in Capricorne : and while you are graving it, you must say these words: Exurge Domine, gloria mea; Exurge Psalterium, & Cithara; exurgam diluculo: and then rehearse this Psalme; Miserere mei Dens, miserere mei; quia in te confidit anima mea.

From hence it is, that so many Superstinons have iprung; and that people at length begun to undertake the curing of Diseased: persons, meerly by the bare Reciting of Certain Words; without any regard had, clther to the Stars, or any thing elfe. us now come to the First Quare which we are to prove, for the Establishing of the Power of Figures: namely, Whether the Starres have any Influence upon, and doe cause any Motion in things here below.

Prime Meteor.

19. Aristotle endeavouring to prove the Affirmative, brings a most Excellent Argument, and worthy of so great a Philosopher; which is this. That, faith He, from whom Motion took its beginning, the fame hath no doubt given to all other things the Power of Self-motion: now, without all Dispute, the Motion of the Heavens was the First in Nature; therefore, whatfoever Moves, Moves by the Motion of the Heavens. In somuch, that if the Motion of these should cease, both Growth, and Motion would allo In Sthar, ceale in all things here below. Funding Sacr. 6-3. brings here an Example of a Man's heart; which, as it is the beginning of Life, and Moti on, so doth it communicate Life, and Motion to all the rest of the Members: So that, if it once be wounded, not onely the Motion ceafeth in all the pars

of he body, but even Life also. You may see this Position confirmed by Hippecrates; who backs it with so many rea-Lib.de ions, and so strongly afferts the truth of Acres thele Celestiall Influences, as that he confidently affirmes, that, by the rifing and fetting of the Starres, a man may foretell Tempelts, raine, Stormes, and other changes of weather: through the neglect of which Observations, Physicians are very often deceived in their Cures and Diseases. Cum temporum mutationes, saith he, & Astrorum ortus & occasus observaverit medicus, quemadmodum singula horum eveniant, pranoscit utique & de anno, qualis hic sit futurus, &c. And then, afterwards shewing, what time, and what Seasons are dangerous for Sick People, by reason of the diverse motions of the Starres, he presently addes: Periculosissima sunt ambo Solstitia, maxime verò astivum periculosum : etiam Æquinoctium utrumque, magis verd Autumnale. Oportet autem & Astrorum ortus considerare, precipue Canis : deinde Arcturi, & Plejadum occasum: Morbi enim in his maxime diebus Judicantur, aliique perimunt, alij verò desinunt, aut in aliam speciem, aliumque statum transmutantur. It would be but lost time, if I should stand longer upon the Proof of this so clear a Truth; which all men ought

190

Rovill.

Plant.

bift.

to confesse to be so, were there no other Argument for it, but this; that it hath been constantly observed, ever since the first beginning of Astronomy in the World, that the Rifing and Setting of the Fixed Starres have been the cause of very great changes here on Earth: and he must either be a very Ridiculous, senselesse man, or esse a very Ignorant, that should go about to deny, that the Hyades, and the Plejades, are not Watry, Cloudy Constellations; that is to say, do cause Rainy, Cloudy, Darke weather: as Leo, and the Dog-starre, bring Heat, and Drowth: and Orion, a Wet, and tempelluous season: and so of the rest. And after Vid. Gul. all, do we not observe, that there are some certain Flowers, that turn about as the Sun does : and others, that appear above the Water at his Rifing; and when He sets, sinke downe againe, and hide themselves, as it were bewayling his absence? Neither are the Influences of the Stars shed upon Hearbs alone, but even upon Stones also: Some wherof do so exactly observe the mouon of thoje particular Starres, whole Influences they bear, as that they change their Alpects with them. An Example of this Truth you have in the Stone called Lunaria, which is indued with fuch wonderfull qualities, as that it changeth its Appearance, in like man-

her as the Moon doth, whose name it beareth. In a word, do not the Humours in our bodies increase, with this Planer, and decrease, when It decreaseth? If any man yet desire to have more of these Instances, backed with Convincing Reasons; he may have recourse to the Astronomicall Prædictions of Ptolomy: and he shall there finde, that the truth of these Influences is too clear, to be called in question.

20. The other Point, concerning the Resemblance of the Heavenly Constellations to Sublunary things, is something more Difficult to prove, though not lesse True: Neverthelesse this objection is brought against it. If the Constellations of the Ramme, the Bull, the Twins, &cc. do resemble these Living Creatures; it is either Really, or else by Imagination. If Really; they are then, either in the Eighth Sphear, or else in some other: but they are not in the Eighth. For, in the Constellations of the Ramme, the Bull, &c. there is no figne at all of these Beasts being figured, or represented by the Stars: neither are they in the Christaline Heaven; nor yet in any of the Sphears of the Planets: for we should then see them, as we do the other Starres: nor yet in a Ninth Heaven; as some have thought. If they are only by Imagination, then are their Effects

also'

also Imaginary, and have no Truth in them; and so, by consequence, the Power of Ta-

lismans, or Figures, is Vaine.

We answere then, according to the ludgement of the most learned Astrologers; thatin truth these Images are not at all Reall: forin the Starres that make up the Constellation of the Ramme, a man may as well fancy a Horse there, as a Sheep, as I have sometimes made triall. Neither yet are they altogether Imaginary, in the same sense as a Chimera is Imaginary, which never had Being in Nature: but they are so ordered in the Havens by our Imagination, because that the Constellation which we call Aries, or the Ramme, hath a strong Influence upon sheep; as Taurus hath upon Buls; and so of the rest. Or elsethe Celestiall Ramme is so called, because there is not any beast upon the Earth, that is more like in Nature to this Constellation, then the Ramme: For it renders him that is born vnder it so Pious, so Meek, so Gentle, so Courteous, that he resembled in all things the Innocent Lambe. He will also have a Hard Head, and thick, Haire, Jusphar. curled in rings, like a fleece of Wooll. Vidimus enim (faith Functin) complures hujus signi homines, capite malliari, Spissis crinibu ad modum velleris, & supra frontemelevalls quasi capite certarent. And these are the Naturall

nurall reasons, why these Celestiall Signes are called by the names of Living Creatures. One may adde to this, with Functin, that when the Moon is in the Signe of Aries, this Signe hath then the stronger Influence upon the Head of Man, and renders it strong as that of this Beast: and this may be another reason, why this Constellation is called by the name of this beast, rather then of any other. So in like manner, when the same Planet is in the Signe of Taurus, it hath a stronger Influence upon the Neck; wherein consists the chiefest strength of a Bull: when it is in Gemini, the Influence is strong upon the Armes; and for this cause, this Signe is represented by the Image of two children, embracing one another: When it is in the Crab, the Breast is then sharer in its Influences; because that this Creature alwayes goeth upon its Breast: and when it is in Leo, the Signe sheds its Influence upon the Heart; from whence the Lion is said to be a Generous and Couragious beaft. You may fee the rest of this discourse, in the same Author; which I shall not here trouble my selfe to set down, because the reasons do not at all satisfie me. I do therefore beleeve, that thele Signes do cast forth their influences upon the severall Members of the body, though not for these Reasons here delivered; Which

which often prove to be very Impertinent!

Tbid.

but onely, because we dayly see the Experience of it. They do therefore visibly work by their Influences, upon thoic Beafts, whose names they are called by : for, Does run mad, in the Dog-dayes; and Lions are very furious, under the Signe of Leo: and this was the Only Reason, which moved the First Philosophers to call these Constellanons, by the names of these beasts : and all the other reasons that are brought, an but of Later standing, and have been invented by the Later Astrologers. These Constellations then are called by the names of these Living Creatures, because that they are observed to have great power over them. And that I may trouble my selfe no further in this Particular, you may see the Abridge ment of all that *Junctin* hath written hereof, Philof. in Heurnius, Cardan, and Galeottus, who barb.De hath a Particular Chapter upon this Que De dostr. Rion; Quare Signa Zodiaci animalium no mina habent? where he concludes thus; Acap. 35. ries enim, in Oves; Taurus, in boves; Lu, in Leones; Scorpio, in Scorpiones; Piscis, in Pilces; Virga, in Virgines, & steriles; et | de cateris, imperium habent.

As for the rest of the Forty eight Constitution lations. I shall not here speak any thing of Them; because that some, who have underta-

ken to defend the Power of Figures, have faid, that the Signes of the Zodiack only are of power to Worke Effectually, and Generally forasmuch as they make their Circuit, or at least the Sun in them, over the whole Earth; Albuwhereas the others respect but one Part only. Mag. in. Notwithstanding we could very well be able 170d. 6.2. to give an account of all of them; as I shall shew at another time, if I see that This Discourse find but favourable acceptance among the Learned; and I shall also discover the Principall Reasons, which have hitherto lain hid under Fables, why the Ancient Astrologers imposed such Extravagant Names. as they seemed to be, upon all the rest of those Constellations. At this present I shall only content my felte in thewing, how those of the Zodiack :may have power to Operate upon figures framed by Art: and this is the Third Point, which I have undertaken to prove.

21. The Question then is, Whether the Starres doe thed their Influences, as well on Artificiall, as Naturall Things, or not?

laniwor, in two words, that the Affirma-Contra tive is so Certainly True, that neither Tho-gene. li.3? mas Aquinas, (who left nothing unexamined & lib. de inthis Question,) nor Albertus Magnus could specul. & possibly deny it. And even Experience de Miteachethus, that the Sun warmeth as well rab.traff.

the Artificiall Image of a Man, as the Man himselfe: now, if this Planet work indifferently upon Both, why should not the rest doeso 100 ! In a word, why should not the Stars as well Operate on Artificiall, as on Naturall things; seeing that, in their Essence, they are All Natural? Should we exclude Gold from the number of things Natural, because it is fashioned into a Ring! And are Stones rendered lesse Natural, when they are framed into a House? If it be objected, that, however, they should not acquire thereby More Vertue, then they had before. I answer, that the Contrary is manifestly proved by two Reasons. The first is, because that the different Figure renders them more apt to 0: perate, to such, or such an Action, then they were before: as for Example, if a piece of Wood, or Stone, were unapt to hold water, by making of it Hollow, it presently becomes Fit for such a purpose: and so in other Figures. The other Reason is; that these things, when they come under the Worke man's hands, are wrought under certain Constellations; which communicate such Insuences and Qualities unto them, as they never had before: as we see by Experience in Bisket bread; one fort whereof will keep a very long time, and the other, that was baked either before, or after it, will be subject to Wormes,

and Corruption, although kept in the same place, and made of the same Corne, and kneaded up with the same water; and with all other imaginable conditions. But, to keepe our selves to the businesse of Figures only; we shall here conclude; that, if they are prepared, with all these Circumstances observed, which we have before delivered, and ingraven upon some Matter that is Proper for the receiving of the Influences of the Starres; they may Naturally recaine them, and work those wonderfull. Effects, which we have before fet downe. This Conclusion will receive both more Confirmation, and more Clearneffe. by the Answers to the following Objections: in the meane time, for your fatisfaction in the truth of these Influences of the Coelestials bo- contra dies upon Artificial things you may have re- Asvers. courle to Tertulian, Origen, S. Irenaus, S. Haref. L. Augustine, Thekel, or the Author of the book, De Civ. intituled, Liber Lapidum filiorum Ifrael: Ar- Dei Lio. noldus Abbas Lubecensis, Arnobius, Olympio- 6-11. dorus in Photius, Julius Firmicus, and Leun- sclav. La clavius. You may see also the little. Pam- 14. conphlet, written by Barnerio, an Italian, the tra gent.
Title whereof is Pagela County of the Life Code. Title whereof is, Regole sopra la Carta Mari- 80. na; where he proves learnedly, and by Ex-DeError perience, that many Cottons, and Wools of proph.rel. the Eastern Countries, and even of our Own Pand. Countries also, do last longer, or a less while, Turc.cap. 11 pisole 4.

if they be wrought in diverse Kingdomes, and under certaine Constellations; as it is also observed in Ships. Vitruvius proves the same to be so in Buildings also, notwithstanding that both the Stone, and Morter, be as good in the one place, as in the other.

CHAP. VII.

That the Objections which are made against Talismanicall Figures, make not any thing at all against their Power.

THE CONTENTS.

Hence the Custome of using certaine Words, and of applying certaine Characters, in the Cure of Diseases, hath sprung.

2. An Abominable Ceremony used by the E-gyptians, for to cause Haile to cease. The Reason of the Command, given to the Fewes, of not Graffing on a tree of a Different Kind.

3. The Talismans, delivered by Antonius

Mizaldus, condemned.

4. The Objections brought by Gulielmus Parisiensis, & Gerson, answered. The Power the Sun hath, within the bowels of the Earth.

5. A Fourth Objection answered. The sto-

ries of Sorcerers, and of Images of Waxe, of ve-

6. A Fifth Objection refuted. Of the Weapon-Salve, that cures the Wound, by being applied to the Weapon that made it.

7. The Sixt Objection of no Force. Arcmar-

kable story of two Twins.

8. The Operation of these Talismans, proceeds not from the Secret Vertue of the Stone.

9. Cajetan, and Pomponatius defended, against Delrio, touching the Power of Figures.

10. The Vertue of the Starres descends as well upon a Living Scorpion, as upon its I-

mage.

11. The Forcible Reasons brought by Galeonus, in Defence of Talismans.

12. The Objection brought against Francis-

cus Ruëus, answered.

13. The Story of Virgil's Talismanicals. Fly, and Horse-leech, a True one; against Naudæus. Gervais his booke not Fabulous, as is commonly believed.

14. Of some Admirable and Curious Inventions of men, that seeme more Incredible then

Talifmans.

15. Certaine Objections, never before, brought, against the Power of Figures; with their Solution.

) 4

The

200

He Wonderful Effects, which have been alwaies observed to have been wrought by Talismanical Figures, have so perplexed the minds of those men; who account every

thing to be Magicke, which themselves are not able to comprehend; as that, without making any Distinction at all, betwixt Power which is Naturall, and Lawfull; and that which our Faith permits us not to meddle with; they have boldly published, that, what Vertue soever proceeds from Figures, is utterly Diabolicall. But when they perceived, that Knowing Men would hardly fit downe so, and that it concerned them to produce some Reasons, to prove that these Figures can have no Naturall Power at all; they have at length brought These following ones; though they are built on very weake foundations, as we shall make it appeare.

1. The First is, that Reason it selfe tels us, that these Operations cannot be Totally Naturall, but rather superstitious and Dangerous; seeing that, to reduce them to a full, and entire Effect, there are some certaine words to be used; which have no Power at all, especially over things which have no Sense; and that Therefore, the Making of them ought to be forbidden, and rejected, as the Church hath ordained.

To answer fully, and in Order, both to This Objection, and to the rest that follow, I say, that, in the First place, we are to take notice; that, in the matter of these Figures, we have already condemned all Words; and all other Superstitions: so that, to avoid a Tedious Repetition, the Reader must call to mind, what hath already been faid to This. As for the Church, it never yet rejected the True, and Lawfull Power of Figures, such as we have described it : as may appeare out of the Writings of those two Learned Men. Tho. Aquinas, and Cardinall Cajetan. And if the Fathers have sometimes condemned it; it was not till they saw that it was so mixed with superstition (that I say not, Abominations) that they conceived they should never otherwise be able to divert men from the Praclice of it, but by condemning it utterly: as Mofes likewise did, in forbidding absolutely the Graffing on a Tree of a different kind, only to keep them from that finne, which was usually committed at that Action; as we shall shew hereafter. And that it may appear that the bare Figures have not been used alwayes, without any Application of Words and Ceremonies; fuch as were not only Vaine, but Ridiculous also; we may take notice, that in Agypt, when they would cause Haile to cease, which might have been effected by the Vertue

Vertue of a bare Talisman onely; it was thought Necessary, that Foure Naked Women should lye along upon the ground on their backs; and lifting up their feet on high they were to pronounce some certaine words, and so the Haile would cease. Quatuor Mulieres (faid they, as R. Moles reports,) jaceant in terra super dorsum suum nuda, et erigant pe des suos, et dicant talia verba, et operentur istud: grando, descendens super locum illum, n-This Ridiculous Cerecedet ab eodem loco. mony was taken from the Posture of some In Gen. Talismanicall Figure, which served to diven stormes of Haile; whereon, faith Chomer, was graven the Image of Venus lying along. Be fides, some Ignorant persons having lighted upon some of the Characters, which the Arcients had invented, that so they might conceale their Philosophical Scerets, from theur worthy Rabble; (fuch as are those wherewith the Chymists bookes are full:) not knowing the Originall of them, and believing that they had some secret Vertue in them, they grave Such perhaps was the them on Talismans. Ægyptians Serapis, which had on its breat the so much Celebrated Letter Tan. This inscribing of Cifres, and Characters, brought also along with it this Beliefe; that seeing there were Letters written upon Tali man, they might certainly then be read also: and hence

hence did this Superstition take Rise, of speaking Words in the making of these Figures 4 and afterwards, of letting alone the Figure, and using the bare Words only: as it is reported of Trallianus, who used these words Lib. 19. for the Cure of the Collick; of the core, of the continuous of the Collick; of the continuous of the c And Homer writes, that the bleeding of Uliffes 19. Hift. his wound was stopped, by using certaine Ethi-Words: as likewise that of Oroondates was, Geogr.1. in Heliodorus; who, with Strabo, affirmes, 15. that the Indians, and Ethiopians, use no other cap. 65. way of curing their Diseases. Froisart asfures us, that he hath seen these Ceremonies practifed in His time: and even in Our dayes they are used but too often, especially by Superstitious Women. But at last there were some that made more Esteeme of Characters, then of Plain Words, confidering with themselves what the power of Figures was. Thus Pliny reports, that M. Servilius made use of Lib. 28. thele two Letters, M, and A, to keepe him- 49.2. lelte from being bleare-eyed: and Eudoxia the Empresse, being in Travell with a Child, defired, (as Cedren reports,) to have certaine Letters applyed to her Belly, for to bring forth the dead Child: but it was all in vaine; for it cost her her life. To conclude, these things having been invented only for the con- pe fearet. cealing of some Secrets, as we have said, (af-oper. Art. ter Roger Bacon, who faith, Qua Philosophi eap. 1,

adinvenerant in operibus artis, et Natura, u secreta occultarent ab indignis;) they were afterwards turned into Superstition, by those who mixed them with the Images, and made use of them beyond the power of Nature. and that too with so Damnable Ceremonics, as that the very Thought of them is It.

2. Now that the Practice of making these Figures was never forbidden, but only to keepe us off from those Abominations, that were usually hereby committed, (the Invention being neverthelesse Naturall, as we have shewed; and the Things themselves having beene very Innocently used by Good Men, without the affistance of any other Power, fave that of Nature;) we may perceive by a like Example, in the Command that was given, of not Grafting on a tree of a Different kind. For it was given for no other Reason, (that I may here passe by those, which are brought by Interpreters, both Greeke and Latine, which are many times very wide of the Text but only to turne away the Jewes from those Filthinesses, and Abominations, which they usually committed at this kind of Engrating. The Latine words will in some fort hid the Uncleannesse of the discourse of thest Villanies: you shall have them therefore out

of the above-named Rabbi Moses, a man of very great knowledge in these Traditions: Dixerunt ergo, quod in hora qua inseritur una Merch pecies in aliam, oportet ut ramus inserendus lib. 3 stin manu alicujus mulieris pulchræ, & quod vir aliquis carnaliter cognoscat eam præter morem naturalem. Et dixerunt, quod in tempore illius actus debet mulier inserere ramum in arbore. From hence a man might conclude it was, that God, to set a Mark upon the Foulenelle of this Crime, would have the very Trees themselves also to have some Senle of it. For, if a Whore planted an Olive Tree, (faith one of the Learnedest Prelates of France, according to the Opinion of the Naturalists,) it would never beare any Fruit. Oliva, saith he, a Meretrice plantata, vel infructuoja perpetud manet, vel omnind arescit. Now, to Engraffe any Tree what Gul. Paever, is a thing both Naturall, and of it rife de Vself Indifferent: nevertheless in wee forbid niverso. self Indisferent: neverthelesse it was forbid-pars. 1. den, meerly to avoid the Sin which Nature abhors. Propter hoc igitur, is the Conclution of the fore-cited Jew, prohibita fuerunt commixtiones, scilicet incisio arboris in aliam speciem, ut elonzemur à causis Idolatrie, & fornicationum. And the like cause hath alto moved those men, that have condemned Figures; though They are both Naturall, and the making of them Lawfull; as we

Unheard-of Curiofities.

have already shewed. Now the reason why they have been also rejected by some of the more Learned fort, was either to give way. to the Rigour of the Inquisition; as the italians, and Spaniards have done: or elfe, for want of having taken the paines to examine them; as Gul. Parisiensis, Gerson, and diverse others; whose Objections also, which they conceive to be Invincible ones, we shall likewise answer.

3. The Second Objection is grounded upon the Foolishnesse, and Impertinence of the words that are used about these Talifmans; at the making whereof, Ignorant perple doe still use some certain Words, which, tay they, are very neer bordering upon I-

dolatry.

But we have already answered, in the precedent Chapter, that we doe not at all defend the Follies of the Superstitious; but do rather freely condemn Their Observations, and all words, that tend to Superstition. In the same Chapter also we have rejected part of the Fooleries, delivered by Villanovensis: and, that we may not have any Scruple unfatisfied, we doe also here condemn those, cent. Me- which are brought by Antonius Mizaldus: as namely, where he affirmes, according to Ptolomy, that for to drive away Serpents, you must prepare a square Plate of Copper,

and graving two Serpents on it, when the Second Face of Aries is Ascendent, you must say these words: Ligo Serpentes per Cent. 1. hanc Imaginem, ut nemini noceant, nec quen- 52. quam impediant, nec diutius, ubi sepulta fuerit, As also where he saies, accordpermaneant. ing to the same Ptolomy, that, to drive away Rats and Mice, you must grave the Image of them upon a Place of Tin, or Copper, when the Third Face of Capricorne is Ascendent; saying: Lizo omnes Mures per hane I- Aph. 45. maginem, ut nullus, in loco ubi fuerit, manere possit. So likewise for to gather together, and catch Fishes, you must Engrave the Image of a Fish, upon a peice of Lead, or Tin, when the First Face of Aquarius, or Aph. 94. of Pisces is Ascendent, saying: Ligo & adjuro omnes Pisces qui sunt in Flumine (withall naming the River,) ad tractum balista, ut ad hanc Imaginem veniant, quotiescunque in ejus aqua posita fuerit. And so also for the driving of Wolves away, either out of a Wood, or from a Sheep-coar, you must grave upon a Plate of Copper, or of Tin, the Image of a Wolfe, with his Feet Tied, and two Mastives seeming to bark at him, when the Second Face of Sagittarius is Ascendent; and you must withall say thus: Ash. 8. Extermino per hanc Imaginem omnes Lupos, qui funt in hac Villa, aut nemore, (calling the Wood,

Wood, or the Sheep-house by it's name.) ut non remaneat aliquis eorum in illo. As likewise, in the last place, to render a Huntsman fortunate in his Game, you must grave upon a peice of Tin, Silver, or Copper, the Image of a Huntsman, having in his hand a Bow bent, and ready charged with an Arrow; graving it under the Signe of Sagittarius, whose Image he representeth, and saying: Per hanc Imaginem ligo omnes cent. 5. feras Silvestres, cervos, apros, lepores, ut nul-Aph. 100 la meam venationem subterfugiat, quin optatam portionem & pradam mihi semper relin-I have fet down to many of these Talismans, that Men may take notice of them to avoid them, and to give warning of them to those that are Curious Inquirers after such things; who might happily have lighted on them in the Authors own writings, which are full of Superstitions. For, besides that the Manner of making them is Ridiculous, it is also as far different from the true way, that is to be observed in making them, as So that I cannot Hell is from Heaven. much wonder, at the Ill Luck of a Friend of mine; who faies, that of above a hundred of these Talismans that he had made, according to these Vaine Rules here delivered, he never saw any One of them an-But I desiring him fwer his Expectation.

to make one, according to the Directions I eave him; he presently saw the Effect follow. And M. Sanclarus, (the Learned Regius Professor in the Mathematicks, who is vet living, and may be aske the Queston, hath fworn to me 🚶 that he hath cyred a most Intollerable Paine in the Reins, by one of these true Talismans: so much doth it concerne us to be able to distinguish, betwixt the True, and False ones. We reject therefore this Foppish Way of making them, delivered by the faid Mizaldus, as well in the places above-cited, as in some others: as namely in the 44. & 93. Aphorismes of the Second Century; the 98. Aphorisme of the Third Century, and the 47. Aphorisme of the Ninth: in which places he makes use of words both vain, and Superstitious, and also of most False Principles: which is the Reaion, why no man could ever, by using them, attaine to the End he proposed. Now I have formerly faid, that we condemne all Figures and Words, that are mixed with Superstition, in these Talifmanicall Figures only: for as for those Ceremonies & words, which are piously used; as for example, to cause a Storme of Haile to cease; a man may use them without any suspicion at all, according to the Judgement of some Divines. The manner is thus described by Wierus. Having

116.4.de Having first made the signe of the Crosse, against the Lightning, Haile, Thunder, or Tempest, you must take three Hailestones, of those that first fell, and cast them into the fire, in the name of the Holy Trinity; and having repeated the Lords Prayer two or three times over, you must read the Gospel of S. Fohn: which being ended, you must make the figne of the Crosse, over against the Cloud, and the Thunder, on every fide; & make the same also upon the ground, toward the foure quarters of the World: and after that the Exorcist shall have said three times, Verbum caro factum est, adding to it as often these words; Per Evangelia dicta fugiat tempestas ista; if the Tempest were raifed out of malice, saith Wierus, it will cease. But let us leave the determination of this matter till some other time; onely observing at present, that there hath crept in Superstition Here also, as well as into the Businesse, we now treat of.

The Third Objection is grounded, upon the Impotency of the Matter Ingraved. For, how can an Image, which is dead, and without Motion, give Motion to others, and have such Operations, as are attributed unto it? Thus it is argued by Gulielmus Parifeensis, against these Figures. Quomodo Imago mortua, et omni modo inapprehensa, omnique

omnique modo immobilis, moveret viventes?

aut qualiter prastat Scientiam, quam nec habuit, nec actu, nec potentia eam habet certissimum est? Gerson sayes the same, and brings in a manner, all the very same Arguments, in a Booke that he hath written against a certain Physician of Montpelier, who gra-Libsecurved upon a piece of Gold, the Image of a liari duadect, pro-

4. To this I answere, that the Image of It selfe, is dead, and without any Motion: but that by the Vertue of the Stars, under which it was made, it hath acquired new Qualities, which it had not before or else, that the Matter being before indued with fome Qualities that were Proper for such an Effect, it is disposed for such an Effect by a Semblable Figure, and its Qualities are ex-Itaque ars , saith Marcilius Ficinus, Device , solutat inchoatam ibi virtutem, ac dum ad calit.com. guram redigit, similem sua cuidam cœlesti gara, tunc sua illic idea prorsus exponit; quam sic expositam Cælum ea persicit virtute qua caperat, exhibens quasi sulphuri fammam. Thus many things, if they are not excited, work not at all: as for Instance, no make some Hearbs to smell, you must full them betwixt your fingers. So Amhis, which hath received from the Heavens, the Property of drawing Strawes to it; yet unleffe

Ibid.

unlesse it be a while rubbed, and chased, it is not able to doit. The Bezaar, or Bezohar Stone, (which Marcilius Ficinus sayes, signifies as much as, A morte liberans: though this be an Etymologie as Vnknown, as Vntrue:) which is Naturally indued with the Power of Expelling Poylon, becomes allo a very Soveraigne Remedy against it. That of the Scorpion, if there be first graved on it the Figure of a Scorpion, under the Influence of the Celestiall Constellation of the The Flint Stone gives not its iame name. Fire, unlesse you strike it : in a word, there is icarcely any thing, but requires to be Excited, and Awakened up to its worker even as low, as Artificiall things; many wherof appear not at all, unlesse there be Art used to discover them: as we may see, for Example, in Letters written with the juyce of Citrons, Figs, Onyons, Salt Almonicke, and many other things; which mult be either held before the Fire, or else dipped in Water, that they may be read. In like manner also is it Necessary, that the Vertue of Metals, and of Stones, should be excited by the Celestiall Raics, for the Rendering them Apt to effect that which we defire. Now that these Raies are so Powerfull, as that they are able to penetrate Stones, and into the bowels of the Earth, we have already

already proved; and shall here confirme it. by the testimony of Bonaventure: Dicunt Philosophi, quod corpus caleste, mediante (uo lumine, influit usque ad profundum ter-14, ubi mineralia corpora generari habent : et. Lib. 2. quantum ad hoc, verum dicunt. When Te-dift. 12. stimonies, are grounded upon Experience, ut. they cannot possibly then be denied : and we know that the Sun penetrates very farre into the Earth, and there gives life to Plants, and Living Creatures too; which, when we se taken up, astonish us very much: as appeares out of Georgius Agricola, and the mal. subt. Learned Licetus, who is still Professor at Padua. As for Subterraneous Fishes, we find them but too often enlivened by the Stars, to our great Disadvantage: as you may observe out of the Third book of Seneca's Nat. quest.c. 19. Who also, in another place, layes, that Philip having sent men downer into an old Gold-mine, to see if the Covetoulneile of Man had yet left there any thing Undiscovered; they perceived Rivers, running along those deep Cavernes, and many other Prodigious Sights: by which we may be certainely assured, that the Heavens do operate through every part of the Universe. Descendisse illos, sayes this Learned Author, Lib. sum multo lumine, & multos durasse dies : de-0:15. inde longa via fatigatos, vidisse flumina ingentia,

gentia, & conceptus aquarum inertium vastos, pares nollris; nec compressos quidem terra supereminente ; sed libera laxitatis , non fine horrore visos. And those, that write of the Riches of America, assure us, that the Mine of Ptosi, where Gold is generated, is so hollow, and so deep, that nothing can more fitly represent the Dreadfull Image of Hell. If then the Starres do operate, within the bowels of the Earth, upon Living Creatures, Plants, and Metals, why not upon Stones also: I do therefore account the Conclusion of Hieron. Hangest, an Ancient, Learned Sorbonist, to be most True; who, searching after the Reason of Gamahes, concludes, (after a long dispute;) that the Figure, or Painting on them, proceeds from two Causes; from the Starres, and from the Property of the Earth. See here his own words. Quid igitur dicendum sit ? respondeo, ex dyplici radice posse contingere. Uno modo ex radice Siderea, secundum Astrologorum authoritatem, multis experimentis comprobatam. Alio modo, ex radice inferiore, &c. Now this Power, or Vertue of the Starres, works Indifferently upon All Things, which Consideration hath moved many, that stand up for the Power of Figures, to believe, that all forts of Stones, Metalls, or other Matter indifferently, if it be graved, and wrough, according

according to the Rules before delivered, would worke the same Effect. For, as Fire heateth all things that are set before it; in like manner do the Stars Operate, say they, upon All Things Indifferently. But I hold the First Opinion to be the Truer, and more cerraine: not, that this Later is False; but, because the Effect Here is Slower. For, the Fire will indeed heat all things, that are placed neare it: but if the Matter be Indisposed, the Heat will not worke so speedily; as we see in Green Wood; and in a Pibble stone, which requireth a longer time to grow hot in, then a Brick doth: and so in all other things. required then, to the end that the Stars may Operate the more Easily, and in lesse time, that the Matter be before hand indued with some Quality, that is proper to the Effect which we have proposed to our selves; and have also some Sympathy with those Celestiall Signes, which we intend to make use of.

You may see this Sympathy, and the Wonderfull Correspondence that there is, betwixt Stones, Mineralls, Herbs, Plants, Flowers, Tasts, Smels, Colours, Beasts, Fishes, Birds, and all things else, and the Stars, in Georgius Venetus his booke, De Harmonia Cant. 1. Mundi, and in the Learned Comment of M. c. 31. Moreau, a Physician, upon Schola Salernita-na; the reading whereof, in all forts of books p. 322.

what & seq.

what ever, is truly very Admirable.

5. The Fourth Objection, which is brought by the above-named Authors, is, that if this Art of preparing Images be Cer, raine, and their Vertue so great, as is said; the Egyptians, Arabians, and Persians, who were the First Inventers of them, would then have made themselves Lords of the whole Earth, in subduing all their Enemies : which thing they have not done; but contrariwise have

themselves all been Conquered.

To this I answer, that no Image, or Talifmanicall Figure can possibly be Capable of operating so Great an Effect: they may indeed possibly excite, in some small measure, the courage of Combatants, and make them leffe fearefull of the Terrors of Warre; but these Qualities alone will never be sufficient, for the obtaining of a Victory. If any here urge against me the Story of Nettanabo, who is faid to have drowned all his Enemics Ships, by making certaine little Vessels of Waxe, and then drowning Them: I answer, that the Story lookes very Doubtfully; neither doe I give any more Credit to it, then to those Flams we heare reported of Sorcerors, in our owne daies, who are faid, by pricking a little Image of Waxe in any part of it, to wound the same part of the body in the person whom it represents. But suppose These Things were

6: yet it could not be from hence concluded, that these Effects were wrought by the Vertue of the Stars; but rather by some Evill Angels, to whom God may have given some such Power. Gulielmus Parisiensis utterly de- Lib.cinies these stories to be True; as indeed they 2000. are meerly Fabulous: neither do I believe there is any one of them that hath any Truth init. If it be returned upon us, that there is nothing in them, but a man may believe, fince Possibly they Might be True: I answer, that Many Things Might have been, which never yet Have been : as, for instance, there might have been more Sunnes, and more Worlds then one.

6. The Fift Objection is, that it is Necesfary that Naturall Agents should, some way Arist. or other, Touch the thing they are to Operate upon: but a Figure, which cureth the Stone, Collicke, or any other Disease, toucheth not at all the Part Affected: the Vertue of it

therefore cannot be Naturall.

The answer to this Objection is so easie, that, without troubling our selves to reckon Dift. 37. up, with Scotus, the severall wayes of Touch- in sens. ing, we need no more but give an Instance in a Hot Bricke. For as a Bricke receives heate from the Fire, without touching either Cole, or Flame; in like manner doth an Image receive the Influence of the Stars, without Touching Any Part of the Heavens. In a word,

all the Touching which is here found, is only a Virtual Touching; as we see in the Sunne, which though it be so farre distant from the Earth, doth neverthelesse warme it by Its Vertue. And as a Bricke, heated either by the Sun, or by the Fire, doth afterwards operate upon any other body, communicating its Vertue to it, if it be applied unto it: in the fame manner doth a Figure, or Image operate upon Another Body, communicating the Influences, which it hath received from the Stars, unto It, if it be in like manner applyed, either by a Corporeall, or by a Virtuall Touching only. I shall not here produce the Miraculous Operation of the Weaponfalve, which cures a Wound, at a hundred Leagues distance, if it be but applied to the Weapon that made it; and that you dreffe it, as you would doc the Wounded Person: as Traff. de it is proved by Rhodolphus Gochlenius, and Armar. Baptista Helmontius. If I should have made De Ung. use of this Example, I should never have beene quiet from having it throwne in my Teeth, that the Operation of this Magnetical Unguent is Superstitious, and Diabolicall. This is the whole Burden of the Ignorant Rabble, who impute, what ever they find to carry Wonder with it, to the Operation of Evill Spirits: and yet I have been affured by M. Loysel, Physician to the late King of France,

France, that this very Operation was Naturall; and that Himselfe had made use of it, with Good Successe, and on a very Good Now if Gulielmus Parisiensis deny, that the Operation of a T.slismanicall Image, which is buried under ground, can be Naturall, because that it is kept in by the Earth, which covers it: hee may as well conclude, that the Operation of a Needle touched with a Loadstone is also Diabolicall; seeing that, although it be a hundred fathoms deep within the Earth, yet will it alwayes turne it self towards the Pole. This Comparison is so much the more Pressing, because that the most of the Learned believe, that this Vertue of the Load-stone is communicated unto it, by that part of the Heavens, which the Needle points to. So True it is, that there is nothing more Powerfull, then the Influences of the Stars, when they have once made an Impression upon things here below.

7. The Sixt Objection strikes at the Power, which we have attributed to Resemblance: for, there is not any where (saith Guliel. Panisensis,) a nearer Tye, and Correspondence, then in the Love of a Mother and her Child: and yet if a Mother drowne her selfe, the Child will not presently do so too; and so he concludes: Quanto minus igitur in tam diversis, ut sunt Imago & Imaginatum, nulla li-

gatura,

Stone

gatura inter ea erit, que cogat, ut quodpati-

tur Imago, patiatur et Imaginatum.

I know very well, that this Author makes use of this Argument against Nectanabo: but seeing that he brings it also against Talif. manicall Images, I answere; that these Images, (as wee have already faid) have no Power at all over our Wils. Now, to Drown Ones Selfe, or, Not to Drown ones Selfe, is an Action which depends wholly upon the Will. But if a Child resemble the Mother, as well in the Lineaments of the Face, as in the Actions of the Soul; there is no doubt, but that this Relemblance may have very much power, both as well on the Passions of the Minde, as on those of the Body, which proceed from within: as it is often observed. And even in Our dayes, We have heard of two young Children, which were Brothers, at Rie, an Epilcopall City in Provence in France, who by reason of their being so perfectly Like One Another, if One of them were ficke, the Other was so too: as, for example, if One began to have a Pain in the Head, the Other would presently feele it. If One of them were alleep, or fad; the other could not hold up his head, or he merry: and so of the rest, as I have been assured by M. Poitevin, a very honest man, and a Native of the same city. 8. The

8. The Seventh Objection, brought by the same Guliel. Parisiensis, & Gerson, is, That if at any time these Talismanicall Stones have been known to cure the bitings of Serpents, and the stinging of Scorpions; this Effect proceeded not at all from the Stars, but from some secret Properties in the Stone, whereon the Figure of a Scor-

pion, or Serpent, was graved.

This Objection is answered in two words. I say then, that we have already proved, that the Stars have power to communicate this Vertue to the Stone; and also, that it is not atall Naturall to it, and proceeding from its Own proper Vertue: because that, before it was Figured, and prepared under certain Constellations, it had no such Vertue at all. And indeed, to what end should a man take lo much paines in graving, and preparing it under diverse Aspects of the Stars, if it had as much Vertue before? To what purpose also should the Inhabitants of the Country of Hampt 7, in Turkie, trouble themselves to take the Impression of a Scorpion that is figured upon a Stone in a certain Tower, in a piece of Potters Clay, if so be the Clay it selfe had the same Vertue before? We say therefore, that it had not Any Vertue before, Proper for such an Operation; and that this Vertue was communicated unto It, by the

Stone in the Tower; and to the Stone, by the Starres.

I shall not here examine the Arguments of Gul. Parisiensis, which are to be seen under the Title of the 56. Page, which is; Quod omnia ista que siunt per Imagines, malignissime fiant: because that in this Chapter he treats only of Speaking Images, or Statues: fuch as was that Speaking Image of a Man. which is falfly faid to have been made by Albertus Magnus: But the Images we speak of, are quite Another Thing, as is also their Power. So that there is nothing wanting now, to the full Vindication of them from Falshood, and all other Calumnies, save only to answer the Eighth Objection, brought both by Gerson, and Guliel. Parisenfis also.

9. And it is This; which seemes to

be the most powerfull of all the rest.

If so be the Stars are the cause of these Operations, why then (say they) should not their Vertue descend rather upon the Living Scorpion, then upon it's Image: Quomodo, saies the Later of these, non poticis hujusmodivirtus descendit super ipsum Scorpionem vivum?

If we but call to mind, what hath been before delivered, we shall find it no hard matter to answer this Objection. For,

we

we confesse, that the Living Scorpion is not at all Exempted from this Celestiall Vertue; seeing that, if It be applied to the Wound, It cureth it, as well as It's Talifmanicall Image: so doth the Crocodile, the Rat, the Toad, the Dog, and the Viper al-6. And if in all the rest of Living Creatures we find not the same Effect; it is rather for want of searching after it, then any Defect in Nature: seeing that those, that are most skilled in the Wonderfull Works of God, do certainly affure us, that where-ever any Disease is found, There also is the Remedy to be had. And who would ever have thought, that the Gravell, which is found in Urine, should serve for a Remedy against the Stone? and a world of other the like Secrets there are, which are daily brought to Light. But it may here be demanded; Why then should not the Stars communicate the Vertue of driving away Scorpions, as well to the Living Scorpion, as to it's Image ?

I answer, that if it were so, Nature should then make warre against It Self, and should utterly destroy it self in a short time; seeing that all Living Creatures would soone be destroyed by one another. Most wisely therefore was it ordered, that the Stars only, and Men, should have this Vertue com-

municated unto them. 10. The

Difq.

224

The Ninth Objection, is, the An-10. Mag.l. 1. swer of Delrio, to the Reasons brought by Cajetan; and Pomponatius. For, whereas the Later of these saies, that although Figure be not the Beginning, and Cause of Operation, yet it may operate very much: feeing that we may observe out of Experience, that the Figure of a Foule, Deformed Man, strikes us with a kind of Sadnesse: whereas a Beautifull works in us an Effect quite contrary. Besides, Beautifull Objects do so move us, as that we love them; which Foul, and Ill-favoured do not at all: Therefore faith Pomponatius, Figures have some Power to Operate. Delrio answers nothing to this, but only to the Consequence, denying that Magicall Figures are Beautifull, or Deformed. But, even Children may cafily perceive, that his Antecedent is utterly false. For, those Figures, which hecals Magicall, and we Talismanicall, are Truly, and Really, Beautifull, or Deformed, according as the things are, which they represent; which are, for the most part, the Heavens, and the Stars; the Beauty whereof ravisheth our Senses. Besides, these Figures do ordinarily represent some Constdlation or other; as the Virgin, the Twinnes, and the rest. Now if a Living Virgin, and Living Twins, are Beautifull, or Deform-

ed, why then sliould not their Figures, or Pictures be so too! Let us now proceed to the Arguments of Cajetan, which Delrio refutes with as little Reason, as he hath done

those of *Pomponatius*.

This Learned Cardinall then layes down this most True, and Powerfull Conclusion, in favour of Talismanicall Figures. Figura licet non sit ipsum principium Operatiinu, est tamen conprincipium. He proves the Antecedent: quia in artificum instrumeniu efficit Figura, ut illa sic, vel sic operentur; um quia ferrum latum super aquas fertur quod sin formam aliam contrahas, demergetur. These reasons of his are so Strong, and so Cenain, as that it is Impossible to overthrow them. For, seeing that a Plate of Iion that is Large, and very Thin, will swim upon the water, but if you reduce it into a Round Solid form, it finks presently: is it not evident, that this proceeds meerely from the Figure? What manner of Spirit mult he be of, that dares affirm the conuary; unlesse it be one that meanes to say, however, as Delrio faies; whose Answer you have in these words. Responded, Figuram ¶e Conprincipium in motu locali, & Operalionibus quæ per hunc motum fiunt; ut lunt varia divisiones continui per dolabram, per malleum, per asciam, per serram, non vero in Opera-

Operationibus qua fiunt per alterationem. I cannot but wonder, that this Acute Jesuite, who hath shewed himself in other things a most Learned, and Sound Philosopher, so that he contes not short of any in the whole Society, should so grossly oftend here, a. gainst those very Philosophicall Maximes, which himself hath laid down. For, where he grants, that Figure is a Co-principle in Locall Motion, and in the Operations which this Motion produceth; but not in those which are caused by Alteration; he concludes against that, which Himself had before laid down; seeing that, according to the Common Consent of all Philosophers, Heat is caused by Morion: but Heat is a kind of Alteration: Therefore Figure is, of It Self, a Co-Principle in the Operations which are caused by Alteration.

Again, when he grants to Cajetan, that a Large piece of Iron may perhaps swimup on the water; yet he saies, that it is not by reason of the Figure, but of the Quantity: these are his words. Sedesto, siat; erit, non ratione Figura, sed ratione Quantitatis. Well, but of It Self, and in Sound Philosophy, Quantitas non est activa: See then what the Consequence must be. And in the end, when Cajetan concludes, that it is the Figure therefore that makes a large piece of Iron

to swim upon the Water; Delrio answers. that this Figure is only Accidental: for, faith he, let this Large, Thin piece of Iron be feduced into some other Figure, either Circulat. Square, or Five-angled, it will doe the fairle: that is to fay, it will still switt upon the water: therefore the Figure Operates not : Bur by Accident. But here Delrio deceives Himselfe, for Cajetan's Purpose is not to oppose one Flat Figure, or, as the Mathematicians speake, In plano, against another Flat Figure, either Square, or Circular: but a Plane, Flat Figure, against a Solid one. for a Flat Figure, whether it be Square, Circular, Octogonall, or of what fashion socver it be, will doe that, which the same Figue, if it be solid, will not doe: which is most True; seeing that a piece of Iron that is Square, and Thicke withall, finkes prefently to the bottom of the water; which the lame piece of Iron would not doe, were it Square, and very Thinne It is therefore amost Undeniable Maxime, that Figure hath ome Power to Operate.

it. The Other Objections which are mide, against the Power of these Images, are strong to the downer, and refused by Galeutrus: the most De De wighty of which, are these following.

In these Images which are ingraved on c. 24. Gold for the cure of the Stone, and the Pain

. 2

 $\mathbf{Q} \cdot \mathbf{z}$

in the Reines, the Gold of its One Nature cannot worke this Cure; much lesse then can the Image; which being without Life, cannot by any meanes alter the Gold, and change it into another Nature. Besides, in the Image there is found neither Action, nor Passion: againe, the Gold, of It selfe, whether it be figured, or not, is still of the same Species; and Consequently the beames of the Starres must alwaies work upon it, after one and the same manner: and if it should work rather upon Gold which is Figured, then upon that which is Plaine; this Action would feem to proceed, rather from the Election of the Heavens, then from any other Cause. In a word, the Vertue, which is attributed to this Figure, can neither be Natural, nor Artificial: Not Naturall, because it proceeds from Within:much lesse is it Artificial; because it is not communicated unto it by the Artificer: it must therefore necessarily proceed from some Other Cause.

The Learned Answer of Galeottus to these Objections is this. Non Enim in hac re mutatio speciei requiritur, nec proprietas auri immutatur, nec ulla Calorum Electio intervenit, nec ab Artifice vis illa sanandi datur, nec Imago, ut Imago, quicquam Efficit, &c. sed principium Actionis ac Passionis affert, ut B. Thomas, Magnusque Albertus testantur, non ul Figura,

Figura, & Imago, Mathematice animadversa; sedut efficit aliam in re figurata praparationem, que calcstem actionem sine difficultate varijs modis accipiat. And afterwards explaining how it comes to passe, that among the diverse kinds of Figures that are under the Heavens, some are more Naturally Apt to receive the Influences, then Others are, he brings in the Instance of Looking-glasses, amongst which, those that are hollow, receive the beames of the Sunne, in so full a measure, as that they burne; and others receive them scarcely at all. So the diversity of Hils, and Vallies, is the Cause of a greater either Heat, or Coldnesse. We may also here adde an Instance in pieces of Ice, which the Sun cannot so easily melt, and dissolve, if they be Plaine, and smooth; but very easily; if they be Uneven ; and Rough. Which hath given occasion to some to say, that Painted Figures are nothing so Proper to the Subject we treat of, as Graven, and Carved are: which is most True. As for Gold, although the Figure change not the Species of it; yet notwithstanding it renders it more Apt, and Proper for such an Action: 25 Water, Cold, and Hot, though it be still the same Species, yet the one will boyle our Meat, when the other will not. Which. makes Galeottus to conclude, in these termes ? Requiritur ergo, in unius & ejusdem species 23

rebus, certum cultura temperamentum, ut vari-

esur effectus.

23P

12. It hath also been Objected, against Franciscus Rueus, who undertooke the Defence of This Kind of Sculpture, after Galeours, that if it be indued with fuch Wonder. ful Vertues, Man's workmanship should then have more Power, then God's: seeing that the Graved Figure of a Lion should be able 10 cure the Paine of the Reines; which a Living Lion could not doc. To this he an-(wers, and that very Pertinently, that, That which Man does, is as welthe Work of Cod, as that which God himselfe does; seeing that We are but His Instruments; and that all our Actions, according to the Apostle, are in Him, and depend on Him. Besides, we iometimes lee, that That which hath been compoled by man, proves to be of Greater Viertue, then that which God hath simply Created: as, for Example, Treacle is of more Soveraigne Vertue against Poyson, then any Simple, that the Naturalists have yet found Out.

13. I thought that I had now answered All the Objections, that had been made against these Figures: but I have lately met with Another, which is a more Confident one, then any of all the rest rand it is Nama-44 bis, in his Apology, which we have hereto-

fore cited: where defending the honour of *virgil*, who is branded with the name of a Necromancer, because that he sometimes applied himselfe to the making of these Talifmanicall Images; he boldly affirms, that all the stories, which are reported of this Poët, are Falle, and Ridiculous. He denies then, Consequently, those Images which He made, as, the Brazen Fly, which he fet up, upon one of the gates of the City Naples; which, for the space of Eight yeares, kept all manner of Flies from comming into the City. He denies also that other Talisman, of a Horseleech, graved on a Plate of Gold; which he cast into a Well, for to drive away the vast multitudes of Horsleeches, that annoyed the same City. In a word, he stands not to dispute, whether the Operations of these Images are Natural or not but hee plainly denies in Termes, that there was ever any such thing in the world: as if he could not by any meanes have defended Virgil's Innocence, without easting himselfe upon this Extreame, and giving the Lye to all the Authors that have reported these stories. That which he layes, in the Progresse of his Discourse, by way of confirmation of his Affection, is after the same Rate. For, by reason of the great humber of Places, from whence thele bealts are reported by Historians to have been 232

been driven away; one may, faith he, very well doubt, whether, because they are said to have been driven from so many, they were ever driven from any, or no. As if, because of the great number of Battails that Hannibal is reported by Historians to have fought with the Romans, we might not, by the same Reafon, doubt, whether hee fought any with them, or no. He faies moreover, that Scaliger had good reason, to make himself merry with one of these Fly-drivers, who having made a Talismanical Plate for This Very Purpose; he had no sooner set it up, upon one of his Windowes, but a Fly comes presenty and shites upon it for Handsell. But he must not thinke, that these Reasons of his are able to derogate any thing, from the Power, which we have acknowledged these Figures to have. For, (that we may give him his Answer,) if such a Physician is not able to Cure a Sicke man; or if fuch an Arithmetician be not able to bring to an end some Operation, which he hath begun: shall we therefore conclude, that Physicke, and Arithmetick, are False and Ridiculous? An Able man can do that, which an Ignorant man cannot: and if he also sometimes faile, it must be imputed to some default, either on his part, or on the Matter; and not in the Science, which is Infallible. In which notwithstanding there are

so Many Things to be observed, that I cannot wonder much, if many men find not the Effect answer their Expectation. Another reason, which renders the Endeavours of men herein often Fruitlesse, is, the little Certainty that we have, of Celestiall Affaires, as being so farre removed from us. And this is that, which Roger Bacon saith. Quia difficile est in Lib.cit, his certitudinem Cælestium percipere, ideo in his multus est crror apud multos; et pauci sunt qui sciant aliquid utiliter, et veraciter ordinare. And this is the Only Reason, why so many great Personages have passed by, both this Science, & that of Erecting Horoscopes, and also the so much Famed Philosophers Stone; being taken up with Imployments of more Importance, and which required not either so much Time, or Paines: Not, but that they acknowledged the Truth, both of the one, and of the Other; and Especially of Talismans: as may appear out of severall Epilles of Joseph Scaliger to the Srs. de la Vau, Valet, and Bagarris. So that I am of opinion, that if his Father, Julius Scaliger did make himselfe merry, to see, that a Mathematician should not be able, with a Figure made to drive away Flies, to keep a Fly-from comming and abusing it; it was rather to laugh at the Ignorance of the Artist, then at the Art he professed; seeing he hath acknowledged

Unheard-of Curiosities.

the Power of it, in diverse places. As concerning the Author, called Gervais, who attributes to Virgil these Talismanical Images; as namely, a Brazen Fly, a Golden Horfeleech, and some others: the high Imployments which he was taken into by the Emperour 0the, (to whom he was Chancellour:) and the booke which he presented him with, the Title whereof was, Ocia Imperialia, ought in my Opinion, to render him a man Worthy of Credit: for as much as it highly concerned a man of his Ranke, and Condition, to publish nothing, but what was both Grave, Scrious, and True. And certainly, if he should have so much forgotten himselfe, as to have presented the Emperour with a parcell of Abfurd, Impossible, Fabulous stories, as Naudams is pleased to call them; this would have been the meanes to have made him been cryed downe for a Foole; especially in a Princes Court; where there are alwaies found some High Spirits, that cannot flatter at all; and forme others, who, envying the Fortune of the Great Ones, will be fure to examine their very Least Actions; and will not pardon the Least Fault they commit. How then would they have pardoned Those Faults, which were Criminall; fifth as are those, which they would charge him with; which are not htto have proceeded (I will not fay, from a Chancellour,

cellour, but) from the most Wretched Poët that lives ? If it be faid, that Princes have oftentimes the like books presented to them, which are full of Lies, and other Impertinencies: I answer, that such bookes however are never presented by a Chancellour, or by any Person of Note, or Consideration in a State. Neither yet do such Bookes, by whomsoever composed, escape from being answered by some or other: but, as for This of our Chancellour, who hath ever refuted it : nay rather, what Historian hath not transcribed him, and inferred his Stories into his owne writings, as most True ones : And whereas some may fay, that he hath some things, which seem Ridiculous, and Incredible: I answer, that they ought not to be so esteemed; since that the Ages past, and even these Our Owne Daies do produce the like. So, that Admirable Tower, or Steeple, which Necham reports to have been made by Virgil, with such wonderfull Art, as that the Tower, which was built all of stone, moved to and fro, when the Bell rung out; is not without Parallel: for at Monstiers, a City of Provence, the Steeple, whose stones are all mortaifed one within another, hath in a manner the very same motion that the Bell hath in Ringing; and that in so strange a manner, as that sometimes those which are on the top of it, knowing no-

led ; Neron.

thing of it, when they perceive the Bells begin to ring, are very much affrighted: which, I confesse, happened once to my selfe.

14. I could in like manner make good the greatest part of those other Stories, which are reported of this Poet; which the same Naudeus accounts both False, and Impossible: but that I see on the other side, that they come very farre short of those Admirable Inventions of some certaine Instruments, Images, and Figures, which Our Owne Age hath As, for Example, those brought forth. Admirable Clocks, which are to be feen; one whereof I saw at Ligorne, brought thitherto be fold by a Germane; which had so many Rarities in it, as I should never have believed, if my owne Eyes had not seen it. For befides an infinite number of Strange Motions, which appeared not at all to the Eye; you had there a company of Shepheards, whereof some played upon the Bag-pipe, with such Harmony, and Exquisite Motion of the ingers; as that one would have thought, they had been alive. Others Daunced by Couples, keeping exact Time, and Measure; whiles others capered, and leaped up & down, . with so much Nimblenesse, that my Spirits were wholy ravished with the Sight. not here fay any thing of that Admirable Instrument which is to be seen in the hands of

Mr. de Peyresc, one of the Kings Councell, which sheweth the Houres of the Day, and the Just Time of the Ebbing, and Flowing of the Sea, by the Motion of a little blewish Water, which is shut up within a little Circular Pipe of Glasse, in which you shall sometimes see this water quite conveyed away. I shall also passe by Architas his Wooden Dove; and the Artificiall Fly, and Eagle, A. Gell. which have, in Our daies, beene made by Noff. Artto flye, at Norimberg: the Author wherof hath also made very Admirable Hydraulickes, and a Perpetuall Rainbow; as Anto-Lib. 15. nius Possevinus reports : as also the Burning-Biblioth. glasse which Proclus made, in Imitation of ". ". that, wherewith Archimedes burnt the Ships strab. 1. of the Romans, at the siege of Syracuse: the 17. Statue of Memnon, which alwayes yielded a 36.c.7. strange sound, at the Rising of the Sunne: Tacit.anand those of Severinus Boëtius, (so much ral. 1. 2. admired by Theodoricus, King of Italy;) viriar. who, as Cassiodorus saith, made Serpents L. Es. of Brasse to hisse, Birds of Brasse to sing; and, in a word, gave, as it were, Life, and Soule to all kinds of Mettalls: The Art of Flying, which Lucian affirmes, that himself hath seen practised; and which was publickly shewen upon the Theatre in In Pseu-Nero's time, as Suetonius reports: the A'd-dophilo. mirable Effects which Roger Bacon promi-did. 691

sed; as of raising Artificiall Clouds, and causing Thunder-claps to be heard, and Flashes of Lightning to be seen; and afterwards to have all this end in a Shower of Raine: The Figure of the Heavens made Ambros. in Brasse, by Fanellus Turrianus of Cremo-*a, which were much more admirably done, in descrip. then that of Archimedes; and was to be seen, not many yeares fince in Spaine: together with a little Mill, which on one fide made a Noyfe, as of a Mill-clack; and on the or ther, cast forth the Meale ground the Tree, which they call, Vegetall; which is made to grow in a Glasse, in lesse then a Nights space: the Rose, and all other Flowers; which by Art are raised up, out of their own Ashes: the Burning Lamp, which was S. Aug. found in the Temple of Venus, which the de Civ. Violence of Winds could not extinguish: Dei,lib. 21. c.6. and that Other Candle, made of a certaint Stone, Lighted; which was harder then any Iron: Whereof Lucas Tudensis, and Th-In vit. S. status make mention: as also many other Ifidor. the like, which the Learned Licetus hath c. 22. Inc. 21. lately made an Exact Discourse of, in his Numerer. Book, De Lucernis Antiquorum. Laftly, I shall also omir to speak of the Invention of diverse kinds of Hydraulicks in Our Own times, which are of fo wonderfull Strange Contrivance, as that there is nothing in the world

world, which they doe not imitate: as, also those Statues of Men, and Women, that Speak, although Inarticulately, that Move of themselves, and play upon divers Instruments: Of Birds, that Fly, and fing: of Lions, that roare; of Dogs, that bark, and others, that fight with Cats, in the very fame manner, as Living Dogs do: and a thoufund other wonderfull Inventions of Men which are enough to aftonish our senses. And now let the Reader judge, if the Author of that bold, rath Apology, have any just reason to say, as he does, that this Learned Chancellour to the Emperous othe was not in his right Wits, when he wrote the fore-mentioned Book; where the Effects of those Figures, which he artributes w Vingil, have much leffe of Wonder in them, then These we have here specified. So that consequently, a man might, by this meanes, defend this Excellent Poet, against the Imputation of Magick, without denying (both against the Experience of Former Ages, and of Our Own,) the Power of Talifmans; the Truth, and Efficacy whereof you may see acknowledged, (that I may woulde my felf no longer to prove it,) in the works of those Authors which we have formerly cited; whose Quality renders them both without Suspicion, and above all Re-Proach. 14. After

After all these Objections, there are yet some Other may be made, which have quite escaped our Criticks: I shall first propose, and then answer them; to the end I may cleare this Subject; which hath been so Unjustly cried down, of all Doubts. and Difficulties.

It may be then Objected, that, seeing that, in making of a Talismanicall Image, we are to grave only One Celestiall Figure; the rest, which should concurre in the Operation, not finding their Image there,

cannot Operate at all. Secondly, it is Ridiculous to grave the Figure of a Ram, a Lion, and so of the rest; feeing that the Constellations, whose names these are, do not doe the businesse, in the

Effects which we see in Nature; but rather the Sun, passing through the parts of the

Heavens.

Thirdly, the Vertue of the Other Stars will be communicated to the Image, as well as of those, which we chiefly defire to make use of; seeing that, both the One, and the Other, do continually send forth their Influences: those therefore, that are of Contrary Qualities, will hinder the Operation of the Other.

Lastly, these Figures must needs be Superstitious, and no whit Naturall; seeing

that the Figure of a Scorpion, either Ingraved, or Imbossed, on a Stone, hath not only the power to cure the stinging of a Scorpion Itself; but is able also to communicate This Power to Another Figure, taken from it, in a Piece of Clay: as in that we have

fpoken Of.

To the First I answer, that a man may, if he please, grave Diverse Images, according to the Divertity of the Signes that he would observe. Such a one was that Talismanicall Stone of the Sr. de Bagarris, which was feen in Paris, by diverse Learned Men: fuch a one also is one of those Silver Talismans, that M. de Marescot, Master of the Requests, so much honoured me, as to communicate unto me; although I conceive it to have been made by some Superstitious person. For, belides the Table of Latine Cifers than you find there, and some Chymical Charatters; there are also three Angelicall Charaders, like unto those that are found figured in a Book intituled, Les Clavicules de Salomon: which makes me suspect all the rest. The Figure of a Woman, which you see on the One Side, is certainly meant for the Sign of Virgo: and the three Hebrew Letters, which are on the other fide, NAN, are the Abbreviatures of these three Entire words; אל השם אחל. El hascem Echad; that is to fay,

fay, word for word : God; This Name is one. Mr. de Peyresc, of whom I have formerly made mention, a man that is most Exact and Skilfull in Matters of Antiquity, hath, among the many Rarities which his Close affords, very many of these Talismanical Figures also; which he could not have the opportunity of conveighing to me, because that the Intercourse with Lions hath been broken off, by reason of the Sicknesse. I may possibly hereafter have the Opportunity to communicate them to the World, But to return to the businesse in hand. The Influences of many severall Stars may be communicated to one Sole Figure; as the Vertue of many fundry Hearbs, which proceedeth from the same Stars, may be reduced into one Medicine. This Compa rison is used by Marsilius Ficinus, who, following the opinion of the Ancients, faies: Illa verò ex quamplurimis conflari pro arbitrio possunt. Ut si centum Sclis, Jovisque de tes, per centum plantas, & animalia, similiaque sparse fuerint; componere simul hac centum tibi comperta possis: & in unam conficen formam, in qua Solem ferme, Fovemque to tum jam videaris habere. So that there is no great Necessity that the Figures of all the Constellations should be ingraved, but only of That, which you would have to

Operate the most Effectually. And though the Other Starres meet not with a Figure semblable to their Operations; yet will they Operate notwithstanding: for as much as they doe continually shed forth their Influences upon all things indifferently; and do communicate their Vertue to the Gold, or to the Stone; though some, more; and other some, lesse; according to the diverse Aspects, under which they were wrought.

To the Second Objection I answer, inone word, that it is all one, whether it be the Twelve Constellations of the Zodiack, or the Sun in them, that sheds forth these Influences, fo that we be but affured by Experience, that they come from such a part of the Heavens, and that the Effect alwaics. followes: we are therefore alwaies to grave such a Figure, as is Correspondent to this Effect, whether it proceed from the Sun. or from the other Stars. And yet it is Manifest, that it proceeds not Principally from the Sun; seeing that the rest of the; forty eight Constellations, which are not in the Zodiack, and through which the Sunne palles not at all, do neverthelesse, in some sort, Operate also.

The Third Objection is as easily Answered, as the Former: for simuch as those Constellations, which are of a Contrary Nature

R 2

to the Effect which we defire, though they do Operate; yet it is but Faintly, and with Little Force: for we use to observe the time, either when they are not in our Hemisphere; or if they be, we then take them, when their Aspect is weakest, and when a Fortunate Star

accompanies them.

The Last Objection is indeed the most Difficult of all the rest; seeing that the Vertue, which we find Imprinted in a Talisman, seemes to surpasse the Power of Nature. Neverthelesse we are able to make it appear, that there is nothing Extraordinary in it, by instancing in the Loadstone; which having communicated it's Vertue to a Peice of Iron, This Peice of Iron communicates it afterwards to Another, in drawing it to it telf, and retaining it. In like manner may a Talismanicals Figure communicate it's Vertue to Another Figure, which shall have received Impression from It; which shall atterwards have the power to work the same Effects: only the Difference is, we can give a Reason of this Later, though not of the Former. For, the Talisman is, as a Brick, made very hot, which is able to heat another Brick, though not with so much force, as the Fire does: and the same is to be said of the Print of a Talisman in Clay, which can never be so Powerfull in Operation, as

the Talisman it selfe; which is heated, or penetrated, by the Beams of the Stars.

We conclude then, that we may Naturally, and without the Aid of Spirits, prove, by the Secrets of Nature, not only the Power of these Images, but of many other Operations allo, which are more wonderfull. As, for Example, to send Newes to our friends, in lesse then an houres space, above an Hundred Leagues off: as Trithemius Ab- Apol. pro bas; and Bartholemy Cordelier, and after them, societ. Robert Flud, have undertaken to doe. To Frutr. de doe such Miraculous things, by the help of ce. Pari. Looking-glasses, as we would think to be 3.6.4. utterly Impossible: such as were those strange Operations, which Roger Bacon undertooke to do in the number Nine; by which hee promised the Pope, that if he would furnish him with such a Summe of mony, as the Charge of making them would require, he should be able to annoy the Turkes more by these Glasses, then by an Army of a Hundred Thousand Men. Briefly, if Aristotle had not informed us, that the Image in the Aire which inseparably followed a certaine man, so that he could never be rid of it, was Naturall: would it not prefently have been concluded, that it was some Familiar Spirit, or some Demon, that took upon it the Figure of this Man: And yet neverthe-K 3

lesse, this was only the Effect of the Man's own Weaknesse of Sight; which being unable to penetrate the Medium of the Aire, it's beames were reverberated, in like man. ner as in a Looking-glaffe; fo that, when ever his Eyes were open, he still faw his own De sous Image in the Aire. Which makes me to rer. be of their Opinion, who indeavour to vinnel. Dia- dicate the Ancients, from the Imputation of log de Magicke, and to thinke, that the Workes Esscino. which They did, and which are commonly accounted Diabolicall, proceeded meerly from some Naturall Principle: and I am seriously of this mind, that there can be nothing more Ridiculous, then to have recourse to Spirits. For, besides that Campanella, Riolanus, Symphorianus, Campegius, and many others assure us, that, whatsoever they may have done, yet They have never observed any thing that was Supernaturall, at least in those Works, which are said to proceed from Spirits: We our selves may do, without Their Aid, whatsoever they can do, seeing that they have no Advantage over Us, but Operate only by applying Active things ces oper to Passive, like as We do. We conclude Ant. & therefore with the Learned Bacon, Noni-

Nat. cop. gitur oportet nos uti Magicis illusionibus, cum

potestas Philosophia doccat operari quod suf-

Of the Horoscope of the Patriarches: or the Astrology of the Ancient Hebrewes.

CHAP. VII.

That Idolatry is falfely faid to have fprung from the Astrology of the Ancients.

THE CONTENTS.

The Arguments against Astrology ill grounded: and how, by the waies of Nature, it is possible to give judgement of the Good, or Evil Fortune of a Child.

2. The Resolution of Tho. Aquinas, in the

behalfe of Astrology.

3. Gulielmus Parisiensis, and Paracelsus refuted. Astrology by whom found out. The Error of Pliny in this Particular,

R 4

4. Astron

4. Astrology both Good, and Evill; and how. Moses a skilfull Astrologer.

5. Idolatry whence sprung forth, according to Marsilius Ficinus, and Bechay, a Few. Hannibal, & Hasdrubal, Compounded names,

and why.

6. The Opinion of R. Moses, and the Author of the Booke of the Wisdome of Salomon, concerning the Beginning of Idolatry. The Conclusion of all before delivered.

7. Fires used to be made, by the Ancients, to the Sunne, and the Moone: and for what

Reason.

8. Reasons given, for the proofe of the Innocency of the Ancients, in these Curiosities.

Do not doubt, but that, now I here undertake to prove, that the Patriarchs, and First Fathers were Astrologers, and Casters of Nativities, I shall

be accounted a Ridiculous fellow; and that the Common Cry will be, that my Opinions are Wild, and Extravagant, and without Common sense. But be it so; I have already endured so many Calumnies, for endeavouring but to reforme the Ignorant, as that I may very well say with the Poët;

Hoc quoque Naso fercs, quoniam majora tulisti:

Fam tibi sentiri Sarcina nulla potest.

All things are fweet unto me, so that the Truth be but knowne: and certainely my Enemies must of Necessity leave perfecuting me, unlesse they are more senselesse then Beasts. I publish then Freely, and Boldly, This Curious piece of Doctrine, which the Ignorance of the Hebrew tongue kept a long time hid from the Christians. But seeing that my Custome alwayes is, first of all to cleare the Subject which I handle, from all suspicion; it concernes me, that, before I discover the Secrets of this Astrology of the Ancients, I make it appeare, that Men have, without just Reason, or Ground, questioned the Purity of this Science, which, teaching how to erect Nativities, under the diverse Aspects of the Stars, makes us Able to Foretell, and that by a way of Natures owne teaching, the Good, or Evill Fortune that shall befall men.

1. Those then that oppugne the Innocency of Astrology, make use ordinarily of these two Reasons: first, that it is Vaine, and of no Truth; and secondly, that it is condemned by the Maximes of our Religion; which require th nothing at our hands, but

thi:

4.3

this Burden of the Clouster; Obedience, and And if we but consult the Ca. Humility. nons, where this Decree is to be icen, written in red letters; you will finde, say they, that it is not without Cause, that This Art is cried down; seeing it imposeth a Necelsin upon our Actions: and that the Principle on which it is grounded, hath been of fo dangerous Consequence, as that it hath planted Idolatry in the Mindes of Men. Now if these Arguments had not been already answered by so many Authors, it would concerne me to examine them in this place: but Cardinall de Aliaco, Lucius Bellantius, Melanchthon; Pirovanus, Goclenius, and Ranzovius, have so judiciously done it, to the satisfaction of the most Criticall Palate, as that he must be no Man, that shall not acknowledge their Reasons to be most Just, and Sound. For, if the Church, fay They, cannot endure the very name of Astrology; it is not meant of that Kind of Astrology, which, by the Rising and Setting of the Stars, and by their feverall Conjunctions, is able to foretell Rain, Thunder, Stormes, and Tempestuous weather, and, by Confequence, the Plenty, or Scarcity of Fruits: as also, by the Nature of thele Celestiall Figures, to judge of the Naturall Disposition of a new born Child: as, that it will be of a Temperate Humour, if it be borne

borne under a Temperate Signe; and for the same reason, will be also Meek, Affable, and Courteous: or else on the contrary, if it be borne under a Malignant Constellation, by reason of Its being either too Cold, or too Hot, and Parching, the Child will also abound with the Like Humour, and so a man may proceed on in his judgement of him, and pronounce of him Probably, and without captivating the Will at all, that he will be Quarrelsom, and Ill-natured; and these Quarrels being alwayes accompanied with forne ill Accident, or other, one may conclude, that he will be Vnhappy, and Vnfortunate: and many the like things may be foretold, which I shall here omit; because they are so common, that even Children know them. This then is not the Astrology, against which the Church hath given Sentence; but that Other Sort, which hath been Justly condemned; which attributing more Power to the Heavens, then it ought to do, imposetha Necelluc upon the Freest Part of our Soule.

These Authors have likewise given the same Answere to the First Argument, concerning the Incertainty of this Art, which we have before brought to prove the Truth of the Power of Figures. We may therefore account all those to be very Obstinate, and Self-conceited men, who, to asperse Astro-

ogy,

logy, do reckon up all those Astrologers of note, that have been found Liers: whereas they should also as well have produced the names of all those that have hit right, and whose Predictions have even altonished allthose, that have seene the Event to follow. So, the great Picus Mirandula, who, for writing against Astrologers more, and more reproachfully, then ever man did, was called Flagellum Astrologorum, met at last with one Lucius Bellantius of Syena, who was not at all deceived in his judgement that he gave upon his Nativity: for he foretold him, that he should die in the Thirty fourth year of his Age; which accordingly came to passe. And did not Functin, an Italian, of the City of Florence, foretell, that Himselfe should die of some Violent Death, and upon the very fame day was knocked on the head, by his Books in his own Study falling upon him? But that we may not weary our selves, in turning over bookes, in fearthing for Examples of this Kind, even our owne Country of France will be able to affoard us enough, and he must have been a blind man, that hath not observed them.

2. Certainly the Confideration of these Truths prevailed so much upon the Minds of the most Learned men, that lived in the days of our Fathers, that without any making Doubt,

or Scruple at all, they put Pento Paper; imploying their most precious hours of Study, in Confirmation of what their Prededessours had herein delivered : addicting themselves so much the more freely to this kind of Study, for that they saw it was asserred also, even by the most pious Doctors panele of the Church. Damascene, saith, Alios atque 2. lib. de alios Planetas, diversas complexiones, habi-Fide. tus, & dispositiones in nobis constituere. Tho. Cent.1.3. Aquinas hath also embraced the same Beliefe, 6.54.83. citing the fore-named Author, and confirming this Doctrine by the comparison of a Physitian, who is able to judge, by the Complexion, and Temperament of the Body, as by the Immediate Causes, of the Subtilty of the Vnderstanding: In like manner, saith he, may an Astrologer judge of it, by the Diverse Motions of the Stars, as by Causes, also, though more remote. He addes further, cent. A. that it is True which Ptolomy affirms of the phor.38. Planet Mercury; that if, at the Nativity of a Child, it bee found in one of the Houses of Saturne, hee will have an Acute, clear Wit. 1: Pare. And at last, this Learned Doctor concludes, art. 4.69 that Astrologers are very seldom out, in their 2.9.3. ludgement, as farre as concernes the Man-art. 5. ners of Men: for, we are, faith Hee, to be-finis lileeve our Sense, and Experience.

3. I shall here passe by all that the rest generas.

of the Fathers have written, touching this Particular, all which is diligently collected, by Rodolphus Goclenius, a Physician of Majbourg: neither doe I purpose to make an Apology for this Science; for, I shall rest satisfied in the Churches Determination: Only I will here set downe, what the 0pinion of the Rabbins is, in this point in hand.

And first, that I may cleare these Secrets from all manner of Suspition, it will concern me, in few words to shew, that there can be nothing more False, then what is usually given out, to the Disparagement of this our Astrology; namely, That the Beginning of It, hath given Rife to Idolatry. Gulielmus Parisiensis, in his First Part dellniverso, denying the Power of the Stars in Figures, which we have before treated of, endeavoureth to confirme This Opinion; which was first broached by some Christians in the Primitive Church. Theophrastus Paracelsus hath also since judged it True, in his Book De Morb. Invisib. in the Chapter which treats of the Disease, which is called by the name of S. Valentine, or, the Falling-sicknesse; where he saith: Quidam ex populo observarunt, quòd & Planetarum Conjunctiones & Oppositiones, & alij cursus Cælestes, tales morbos irritarent, & augerent;

unde etiam fecta nata sunt, ut quidam crediderint, Stellas esse Deos. But this Opinion hath no Solidity in it at all; and that for Three Reasons. The First is, because the Patriarks, according to the Testimony of the most Authentique Authors, were the Inventors of this Science. The Second is because that their Children practised it, and were Blamelesse. And the Third is, because it is a very hard Matter, Truly to determine, whence Idolatry tooke it's begin-

ning.

As for the First , Fosephus affirmes, that Antique Adam and Seth, were the First that practised this Science; whether it were in them, Infused, or Acquired : and that Abraham, when he fled into Egppt, taught it the Egyptians. This Truth hath so much the more Force in it, in that it proceeds from a man whose Authority is Unquestionable. So that we may Lib. 5, perceave, that Plinie is much mistaken, when 6,7. he affirmes, that none but Atlas was the Author of it: for, besides that we are very certaine, that Astrology was in Vse, long before Atlas; he contradicts what himselfe had said in the Book immediately going before, where he would have Belus to have been the First that invented Astrology: although afterwards again he assures us, the Phænicians were the men. But suppose we should grant him, that

the Phænicians, or else, as others will have it, the Assyrians, were the Inventers of it: yet fill will it be true, that the Patriarks were the Men; forasmuch as, Abraham was an Affyrian; and his Predecessours were Phanicians; a Colony of Assyrians having gone into Phanicia, as we have elsewhere proved. I shall not here speak of the Two pillars which are reported to have been erected beforethe Floud; upon one of which, all the Rules of Astrology were ingraved, by Seth; and which was preserved downe to the very time that Fosephus lived in, who affirmes himselfe to have been an Eye-witnesse of it. Nowir could never enter into any mans breaft to imagine, that these First Patriarks, observing the Motions of the Heavens, did worship the Stars: it were a great Crime to entertain any fuch Thought. Idolatry therefore took not its Beginning from Astrology.

4. The second Reason is grounded upon All Story, both Sacred, and Profane: where any one may see, that there are very sew Ages passed, wherein there was not some Great Personage that was Famous for his Knowledge in Astrology, without being condemned for it by any. It is true indeed, that the Primitive Christians condemned Aquila; who is no other, then the Famous Interpreter of the Bible, knowne by the name of On-kelos

kelos: but it was not, till they found, that this Overcurious Spirit rested not in the simplicity of Astrology, but betook himselfe to the superstitions Observation of the Stars, attributing to them the Power of over-ruling, as well our Mind, as our Body, and that Inevitably too, without leaving us any Power to Decline their Influences, which he is faid to have called by the name of Fatall.. In a word, no man will ever be able to find, what ever Picus Mirandula, (who is seconded by Delrio, and many others,) fayes to the contrary, that among so many Astrologers, that are spoken of in History, any One hath been reproved; if so be that he only observed the bare Rules of Astrology, as we have described it; and followed the Tract, which Nature hath laid down; leaving us the Proper Freedom of our Will, as our Religion teacheth And in this sense, Astrology is, Good, and Allowable; but very Pernicious, if it proceed otherwise. Besides, This Reason ought to satisfie us in this Particular, that Moles himselfe, who was a Man as Holy, as Politicke, was skillfull in the Puritie of This Science, as well as in all the rest, that Egypts: and Chaldea had brought forth; as is proved by Philo Fudeus; whose words we have elsewhere quoted. Theophylatt faith, that for to be able to convince the Superstitious E. In A.C. Apple. Eyptians, c. 7.

Ecclefiaft. gyptians, it was Necessary that he should understand, not only the True Religion, but also the Grounds of the False. Dedi cor meum, faith the Wise man, ut scirem prudentiam atque doctrinam, erroresque ac stultitiam. Vpon which Text, R. Selomo fayes, thatby the two First Words, Prudentia, & Doctrina, we are to understand Sciences Divine, under which he comprehends Astrology: and by the two Last, Errores ac Stultitia, those that are Vnlawfull, in which number hee reckons the Magicke of the Egyptians; to which some will also intitle Moses. And he that defireth to be informed more particularly, how able a man in Aftrology he was, needs but to have recourse to Abarbanel, or Moses Egyptius, lately translated, and corrected by Buxtorfe. He may also see a Book intituled, L' Homme d' Estat Chrestien, written in Spanish, by Fean Marque, and translated into French by le Sr. de Virion, Counsellour to the Duke of Savoy. Now the most excellent among all those Sciences, that the Egyptians, and Chaldeans were skilled in, was, without all Controversie, This of Astrology: who will not then conclude, that Moses was learned in it? But perhaps it will be answered, that Idolatry was not as yet sprung up; and that it was afterwards introduced by the Egyptians, by their being too much addicted to

the Contemplation of the Stars; and that thus it will still appear to have taken its Originall from Astrology. I answere first, that it is False then, that the Beginning of the one, was the Beginning of the Other. Besides, it is certain, that before Moses his time, Idolatry had spread it self through the whole East, and they offered Sacrifices to the Sun. and to the Moon, and to the rest of the Stars; which this Divine Lawgiver, applying himself to the usuall manner of speaking, there cals, The Host of Heaven; the Worship whereof he interdicts the Israelites. But suppose that this Abominable Practise had been derived from the Observation of the Celestiall Signes, either before, or after Abraham, and Moses; which neverthelesse is was not: Or elfe, that the Contemplation of the Stars was the Cause, not of Idolatry in Generall, but of One certain Kind only; which, perhaps is the meaning of Paracellus: What can be hence concluded? Herefie hath sprung from the Scriptures, Mis-understood; must we therefore condemn all, that the Prophets, and Apostles have written:

Reason, that it is Vncertaine, whence Idolatry tooke its Beginning; whether from Arthrology, or otherwise. Marsilius Ficinus re-Devite ports, out of Mercurius Trismegistus, that the

A Agyplian c. 16.

Azyptian Priests, being unable by Reasons to perswade the People, that there were any Gods, or Spirits, which were above Men, were constrained to call downe Demons, or Spirits, into Statues; and to bring These forth to the People, to be an Object of their Adoration. These are his words. Addit, Sapientes quondam Ægyptios, qui et Sacerdotes erant, cum non possent rationibus persuadere populo, esse Deos, id est, Spiritus aliquos super homines ; excogitasse Magicum hoc illicitum, quo Demones allicientes iu Statuas, ese Numina declararent: And from hence came Idolatry. Bechal, a Learned Rabbine, who lived about the yeare of our Lord, 1291.approves not of this Opinion. For in his Tract of Strange Gods, which is put at the end of his Comment upon the first Chapter of Genesis, he assures us, that Idolatry sprung meerely trom the Presumption of Cham's Posterity: which is not much different from that we read in Story: For, Ninus erected Altars to his Father; and Belus caused himselfe to be called a God. And thus, other Proud Princes, following their Example, endeavoured to worke this Perswasion in the minds of the vid. 74- more Simple, that Themselves were Gods, Valentia, though they appeared in the Form of Men. in 1Pfal. Thus Nero despoiled the Altars, intending to in Scudo. have no other Deity acknowledged by the 1.2.6.21.

people, save His Own. Augustus called himselfe the Sonne of Apollo; as Domitian did, of Pallas; by this meanes denying his own Mother that bare him. Alexander believed himselfe to have been the son of Jupiter Ammon. In a word, Historians are full of these kind of Fooleries, which passing for Truths, among the simple Vulgar, it at length became a Maxime with them, that who foever had lived well in this world, and had, by some generous Action, deserved the title of a Heroe; after he was Dead, he presently became a God, and so had Statues Erected to him by the People, (in memory of his high Exploits;) which they afterwards worshipped with such Veneration, as is due to God alone. And peradventure the Princes of the East, especially those of Babylon, for the more firme Imprinting of this Error into the minds of their Subjects, added the Name of some Deity, to their Owne; as, for Example, that of Baal, to Hanni: which being joyned together, make Hanni-bal, by leaving out one Letter, for the more imooth Pronunciation; and so in Hasdru-bal, and maby others. This Conjecture may give some ight, to that Passage of Heurnius, in his Phiof oph. Barbar. where speaking of the Philoophy of this People, hee faith: Ille apud Tratte; Principes Babylonicos mos vigebat, ut aut Dei cop. 4. dicujus nomen sibi assumerent ; aut plurium

254

Divorum, Heroumque, et fortitudine Excellentium virorum nomina aliquot combinata. This Opinion, though it seeme to carry very much Probability with it, yet doth it no way fatisfy R. Mofes: who is of this Perswafion, that Idolatry took it's Beginning, from the too much honouring of Those Statues, that were permitted in the Ancient Law; as we have formerly faid, of those of Laban, and of the Golden Calves of Feroboam. The Author of the Book of Wildome is of another 0pinion; affirming, that the Worshipping of Idols tooke beginning from hence; that a Father being very much grieved for the death of his sonne, caused his Image to be made; to the end, that by seeing his Resemblance, his griefe might be somewhat asswaged. honouring this Image too passionately, ha sa.11.0 began cat length to worship it as a God in 15. 64. great is the power of Love. Acerbo enim la Ety, faith this Excellent Author, dolens pater cito siki rapti filis fecit imaginem: Et illum qui tunc quasi homo mortuus fuerat, nunc tal quam Deum colere capit, et constituit inter fo was fuos sacra & sacrificia. You may feeth rest in the Booke ir selfe; which the Libin nistric of these times bath expunged out out Canon. The Observation which Mr. Sell hach made upon the Hebrew word Aghtfabim, seemes to confirme this Later 0 pinion

pinion; for, this word, faith He, fignifieth both Idola, and Dolores: Quod quotannis, status, et monumentis mortuorum dolore afficerentur. Notwithstanding he is in an Errour afterwards, in the profecution of this Truth; when he faies, that Terah, Abraham's Father. was the First that ever worshipped Idols. But this is, to adventure to fay more, then the History of Moles gives warrant for; and to be so Uncharitable, (that I say not Insolent, and Rash,) as to accuse the Ancients without Witness. For, as for the Testimony of Cedre, who faies, that Abraham threw his Fathers Idols into the Fire; and that his brother Aram, endeavouring to preserve them, was burnt; I find no fuch thing in any of the Hebrew Hiltorians: so that one may say of this Opinion, as S. Gregory did of another, as gross as this: Eadem facilitate contemnitur, qua probatur. In a word, we must even be content to satisfie our selves, with Fustin Mar-Advers. tyr, S. Cyprian, S. Hilary, R. Moses, Lattan-Gent. Do tius, and the Abbot Serenus in Cassian, and De Trin. Conclude, that as the Black Art is certain- Li. Moly known to be, though it's Beginning is reh Nenot; no more is that of Idolatry. And Divin. indeed these same Authors now mentioned, Inflic that we may look after no other Witnesses, are of Opinion, that this Abomination was on foot before the Floud: and many others thinke,

quæft.

thinke, that it was not till after, while the Wonderfull Works of God were yet fresh in the Memories of Men. And this, in the Opinion of Alexander Halensis, was the rea-Part. 11. son of Idolatry: Propter recentem memoriam ejus, qui fecit Calum & terram, quam ex disciplina Patrum habuerunt. And when all is done, an Argument to prove the Uncertainty of the Spring, whence Idolarry is derived, might very well be raifed from the Uncertainty, and Diversity of the Opinions here delivered, concerning this Particular, were not That, out of the Book of Wifedome, to be received as the truest, by reason of the Sanctity of the Book. However we doe not yet see any thing to the Contrary, but that Astrology is Innocent, and cleare from the Crime, that it is charged with. We will now by the way fet downe, (that we may leave no doubt behind us,) that which no Author, either of the Greeks, or Latines, hath yet discovered; and which Reason must needs allow, as most true.

7. Bechai then saith, that the Ancient Chaldeans are very falfly accused, to have been such wicked men, as people would make othem; and to have worshipped the Starres. For, faith he, if the First Nazarenes (he meanes the Christians) were so good men, as they have been reported to have been,

in the first Ages of their Belief: why may we not aswell believe the same of the First Men, who were created with a thousand times more Simplicity, then ever hath been found in any of their Posterity since? And who can believe, that they should so give themselves over to those Vile Abominations, wherewith they now stand charged? This Argument is not much different, from that Neverthelesse Bar of Alexander Halensis. dine is quite of another Opinion, and scoffes at those Authors, who will have the First Ages to have beene such Golden, and Silver But, if he had weighed the bulinelle rightly, he would have found; that those Vices, which the Ancients are accused of are so small, in comparison of those, that the Corruption of the Times hath fince brought forth; that they deserved rather to have passed for Merry Pranks only, and to have been ranked among Veniall ins. That which he observes to return to Bechai. of these First Men; and, which, I say, hath. been observed by no man else, is; that those Fires which they made, in honour of the Sun, and Moon, were Lawfull, and Kindled to a good End. For, saith He, they testified the same thing to God, which God testified to them by the Sun, and by the Moon, which is nothing else but a Great Light.

268

They kindled these Fires then, by way of returning Him thanks, for His; and, look. ing up to the Stars, they prayed to the An. gels, which God had there placed, for to move them about, to the Endthey might be Favourable unto them. But, as the best shings come at length to be corrupted, Cham. or his Posterity, looking no higher, then to this Fire, began to worship it; and so, terminating their Adoration in the Sun, and Moon, they paid them those Honours, which the First Chaldeans meant to None, but to

the Author of these Stars alone.

- 8. This Opinion of the Learned Jew may be proved, by two, or three Conclu-The First is, that the Wise men of the Former Ages had knowledge of the Invisible God, by the Things that are Vifible. Now of the things that are Vilible, there is none that more powerfully proves, that there is a God, then the wonderfull Eftects of the Sun, and Moon, and the rest of the Stars. They had knowledge of God therefore, by the Stars. And whereas the Apostle saith, that though they knew him, yer they glorified him not afterwards; he ipeaks of those Philosophers, which had knowledge of him only by this Naturall way: But the First Chaldeans, belides this way of Knowledge, had knowledge of him

him also by Revelation. It is Probable then, that this Later way, joyned with the Former, brought them to a just acknowledgment of Him; which they expressed by these Fires, which they kindled in Honour of Him. Another Conclusion is, that thele Chaldeans had not as yer dealt with Spirits: and although that, after the Floud va great part of this People, whom the Pride of Cham had corrupted, had addicted themselves unto them; yet notwith standing the greatest part fill kept themselves to the Lawes of their Fathers; and would not acknowledge any other Demons, save those Spirits, which they conceived to have their Residence in the But I should perhaps be thought to talk Idly, with this Rabbin, had I no other Proofes of this, but what I have out of his Schoole. But these Truths are acknowledged also by *Famblicus*, who is of the fame Perswasion. Chaldaos verò, (saith Ficinus, speaking of this Philosopher,) Damonibus non occupatos, Ægyptijs anteponit. See allo what Porphyrie faies, speaking of the Oracle of Apolly, which was enforced to fay, that Chaldais, qua vera esset sapientia tantum, Hebraisque ipsis concessum agnoscere; pura

Unheard-of Curiosties.

Æternum qui mente colunt Regemā, Deumā, . The Fires then, which they kindled before Porth. 1. the Sun, and Moon, were not consecrated to idephi-

Demons . Resp.

And, as for those Spirits, which Demons. they prayed to in these Starres, the Pra-Aise of it is so lawfull, as that We our felves, in our Litanies, doe also invocate them. And, but that These Words would be an occasion of Scandall to the Ignorant. I could very well fay : O Angell of the Sun, and thou O Angell of the Moone, pray for me. And here I could give thee, Rea. der, some very Choise Observations, concerning the Ancient Orientall men, and their Adoration of Spirits, and Ghosts: but I consider, that I have many Enemies, I shall therefore hast to another Subject. which is as little Known to the world, though lesse subject to Suspition.

6. Conjectures, on the Figure of our Sun-

CHAP.

Those,

Hose, who have had more then ordinary skill in the Science of Aftrology, and who have sometimes all taken the paines to erect Figures, and cast Nativings

have affured us; that it is a very hard that ter to practife these Curious Arts, without the helpe of some Instrument. Which hath moved some of the Rabbines to conclude that seeing their Fore-fathers were skilfull in this Science, they must needs have made use of One, or More of these Mathematical Instruments; that so they might be ableate profe cafely to agraine to the end of thole Operations, which the Leanned reckon w be of Astrological Cognisance. Now that the Ancients had of these Instruments, and in their practife made use of them, may be made appeare out of Historians; some of which have made mention of the Chalden Astrologers: as namely, Q. Curtius, who giving an account of all those that went form of Babylon, for to receive Alexander th Great, saith: Magi deinde, suo more carmen canentes; post Chaldæi, Babyloniorum, non vates modo, sed etiam Artifices. Where, by the word, Artifices, he meanes these Astrologers, who made Instruments, for the Prastife of their Art. And this is the Glossed

Heurnius: Idest, ij Astrologi, qui Astrorum Inchala cursus observabant, varia instrumenta in eum volum fabricantes. Hence we may discover; what the ground was of that Fable of Atlas, King of the Mauritanians, or Phaniciums, who fled before the Army of Fosuah. For, the Heavens, which the Greeks (whom we may truly fay, to have been the Corrupters of all Antiquity,) fay, that This Man, who was both a King, and an Aftrologer, bare up with his shoulders, was only a Globe, or Sphere, not much unlike ours; which he made use of, in searching after the motions of the Heavens. Ac tum, faies the fame Heurnius, disciplinas avitas ipsum excoluisse; L spharamque, Cali effigiem confecisse. Vnde posted Poeta, et mendacissimi Graci, Caligestationem ipsi affixerunt. It is most certaine then, that the Ancients had certaine Instruments, which they made use of, in their Practife of Astrology. But to conclude now, that those which are described by Chomer, and by another Anonymous Rabbine that I have seen in the Library of Cardinall de Saintte Susane, were invented by the Hebrewes; the Conjectures which I shall afterwards produce, will not suffer me to beleeve. However, I will here give you a particular Description of them, as I find it delivered by these Authors.

2. The

Ibid.

Heurnius

2. The first piece that you saw of the Instruments, was the Base, or foot of in which was made of a Thin Plate of Copper, or some other Metall, bowed, and hollowed, in manner of a Bason. Three small Piller role up from the Superficies, whereon were written these three words, דין שלוכם אמת Din, Schalom, Emet: that is to lay; Judge These Pillers bare ment, Peace, Truth. up two great Semi-circles, which made upa Triangle, with so great Artifice, that it was neverthelesse Round, in the Superficies. With in, you had a Great perfect Circle, which had within it, two others: and all of the same Me The First, which was tall with the Base. the greatest of these Circles, had these work upon it; שמי השמי , Schemai haschamain, THE HEAVEN OF HEAVENS. Th fecond had onely written upon it, Schamaim, THE HEAVENS: and the Third had only this one word upon it, will raquiagh, which signifies as much, as Expan fum. This Later Circle, and the First, were nothing so admirable, as the Middlemoli which was beset round, with very many leve rall Little Circles, which were all Moveable; among which there were seven, which ap peared more Eminently then the rest, by ter fon of their being placed nearer the Center of All these Circles had little the Instrument.

Stars on them; and those, which were upon these 7. Circles, were marked, each of them with one of these letters, שוות של which fignifie the Planets, in the order that we reckon them, beginning with that which is turthelf offfrom us, which is Saturne. Neare thefe letters, there was feen these following words: יום ראשון שני שלישי רכיעי חמישי שישי שכיעי Jom Rischon, Scheni, Schelicsi, Revigbi, Chamischi, Schiesi, Scewighi: that is to fay, The First, Second, Third, Fourth, Fift, Sixt, Seventh Day. Every one of the Circles of the Planets, had upon it the number of y eares that it finishesh its Course in: and that of the Moon had ingraved on it these twelve Characters, נאסחאאחחכטשא, which are the hrit letters of these names of the twelve ניםן אייר סיוז תמוז אכ א:יול תשרי ; Moneths חשון כסליו טכת שבת Nifan, Aijar , Sivan, Tamouz, Ab, Aelol, Tifri, Tifvan, Killien, Tebet, Schebat, Adar; that is to fay, MARCH, APRIL, MAY, FUNE, FULY, AVGVST, SEPTEMBER, OCTO-BER, NOVEMBER, DECEMBER, FA-NUARY, FEBRUARY. Now these Cirdes were ordered so exactly, as that one might perfectly distinguish the Degrees, and distances, there set downe. In the Midst of all, and in the very Center, there was plaand a little Blew Ball, which was a little hollowed:

lowed; on which were described many letters accompanied with certaine Lines, acrosse which ran a little Greene Streake, or Circle; like to another made in the same manner, which went round about the Great Circle of all, which included all the rest: and all along both of these, you had these words engraved! נתר הבמה בינה חסר גדולה תפרת נצק הוד וסיד סלכות. Ceter, Chochmab, Binah, Chefed, Gedolah, Tipheret, Netsac, Hod, Fesod, Maleout: which fignifie in order: CROWNE, WISDOME, INTELLIGENCE, MERCI, MAGNIFICENCE, GLORY, VICTORY, POWER, FOUNDATION, KINGDOME. And these are the Ten Names, which the He brewes call, ZEPHIROTS.

I shall not here meddle with any of these Questions; namely, Whether this hollow Blew Ball intimates, that the Ancients conceived the Earth to be of this Figure: whence peradventure some of the Greeke Writers tooke occasion to say, that it was of the sorme of an Omega. 2. Whether the great number of Stars, which had each his Proper Circle, shewed, that every one of them had a Peculiar Orbe; and that consequently there at many more Heavens, then our Philosophers reckon upon. Whence R. Moses also took occasion to say, Non est autem impossibile, qued qualibet Stellarum six arum sit in calo su proprio,

proprio, et motus omnium ipsorum sit upus, et omnes sphara ipsarum revolvantur super eosdem Polos. 3. Whether the three Great Circles represent the Three Heavens, which the most Learned do acknowledge Only; accounting the Aire, or the Vast Extent, which is betwixt the Earth and the Heavens, for the First; the Heaven, wherein the Stars are, for the Second, and the Place of the Blessed, for the Third: avoyding by this meanes that Dispute, concerning the Heaven that S. Paul was caught up into. Neither will I Positively determine, whether, or no, this Green Line, or Circle, be the same with That, which is called by the Cabbalists, Linea viridis qua circuit Universum. I shall passe by all these Questions, which some other may refolve; that I may come to those Conjectures which I promised, which wil let us see, how little Assurance we an have, of the Antiquity of this Instrument,

4. The First is, that seeing that before the time of these Rabbins, no man ever made mention of this Instrument; and that, before these men gave us the Description of it, the Doctrine, on which it was built, was known; it is Probable, that it was invented afterwards, upon this Doctrine. The Second is, that Rabbi Kapol, who was a very Learned Astrologer, makes not any mention at all of

T 2

it, in any of his Astrologicall writings; as neither hath Abraham Avenar; nor, before Them Both, R. Moses. It is true indeed, that Aben Esrain his Sphere of the Hebrewes, Indians, Persians, Egyptians, and Arabians, an Author often cited by Scaliger, cals to mind a certaine Instrument, that was arciently much in use among these People: but seeing he gives us no Description of it at all, and speakes but sparingly of it; we may conclude, that it is Vncertaine, what the Fabrick of it was; for otherwise, he would certainly have described it, as being Necessary, in the matter he had in hand.

The Last Conjecture, which makes me thinke, that this Instrument was never in use, among the Ancient Hebrewes, is, because that the Names of the Moneths, which are graved on the Circle of the Moon, are not Hebrew, but Chaldee: and although seven of these names are to be found in the Hebrew Bible, which are thele; ליהן סיון אלוד בסליוטבת שכח אדר, Nifan, Sivan, Elol, Kisleiu, Tevet, Schevat, Adar; MARCH, MAY, AUGUST, NOVEMBER, DECEMBER, JANUARY, FEBRUARY, yet are they not therefore Hebrew; for they are no where found, lave only in the Bookes that were written, during the Captivity; as Haggai, Zechartabi

Zechariah, Daniel, Efra, and Esther. If the Author of this Instrument had made use of these three names of Moneths, which are indeed Hebrew, though out of use; a man would have had the lesse suspition of it: וף אתנים כול Ziu, Aitanim, Boul; which are 3. Reg.c. The 6. v. 37. used in the Third Booke of the Kings. Translator of our Bible, interprets them not, et cap. 8. nor specifies, what moneths they were. cas Burgensis, Elius Levita, Marinus, & Iniz. Ludovicus S. Francisci, say, that they were, Exod. & In Thisb. APRIL, SEPTEMBER, OCTOBER. We may conclude then, lend, Heb. from these three Conjectures, that this In-Glob. strument is none of those, which were in use sing. among the Ancient Hebrewes: and we may Lib 8. adde, to this Conclusion, that as well the Anaceph. Figure, as the Invention of it, is unknown to menf.

5. The Figure of AhaZ his Diall is more certaine; or rather, is lesse suspected of Novelty: but that the Fabricke of it, as it is delivered to us, is entirely perfect, and such as it was Anciently, I finde not many Reasons to induce me to believe. For as much as, except only one Rabbine, who is indeed a very Learned man, I have not met with any Historian, either Christian, Hebrew, Ægyptian, or Arabick, that hath taken any notice of it, or so much as touched upon

Yet because there is lesse uncertainty found in it, then in the Sphere aforesaid, and also, in case any man should have a mind to take one fingle Authors word in this matter; I am content to give you the Description on of it, as he hath delivered it, seeing it is Proper to my Subject in hand. For the Ancients, in their Horoscopes, did often make use of these Dials, what soever the Fassish of them was, observing exactly the just motion of the two Greater Luminaries. doe not finde then, throughout the whole Bible, any mention made, of these Sciotericall or Sunne Dials, save only in the Last Book of the Kings; the Author whereof, speaking of the Cure of that Good King, who was Sonne, and Father to two other so Abominable ones, saith: Invocavit itaque Isaa Propheta Dominum, et reduxit umbram pa lineas, quibus jam descenderat in Horologii Achas, retrorfum decem gradibus. The Originall Hebrew calls this Instrument min Maghalot Achaz; that is to fay; the Ascensions, or Degrees of Achaz. So much for the Name: but as for the Figure of it, there is no man hitherto, that hath published, what it was: I shall therefore bethe First, (after R. Eliahou Chomer,) that shall communicate it to the world: and it was after the following Houres, this Defect was supthis manner. Copper,

Copper, of what Bignesse a man pleased, was wrought into the Forme of a Crescent: the hollow part whereof encompassed a Ball. or Globe, of the same substance, having the houres of the Day described upon it. Globe, or Ball, was compassed with a Circle, which was raised above it about two Inthes, and had 28, holes bored in it; which served to shew the Houres, as well by the Moon, as by the Sunne; in this manner. The Instrument was placed upon a Pedestall, or else upon a Window only; (as Chomer saith, That of this Kings was:) but insuch a manner, as that one of the Hornes of the Crescent, which was to be fitted to the Elevation of the Place, must respect the East; and consequently, the Circle, that croffedit, would look toward the South. When the Sunne then shone, it cast a shadow towards the Opposite Horne; so that, the shadow falling upon the Round Ball, the height whereof exceeded not that of the two Hornes of the Crescent, it shewed exactly the houres, till about Ten of the Clocke, according to our manner of reckoning the houres:) at which time the Sunne, being too high, could not cast the shadow any longerupon the side of the Horne: so that, for A Stone, or elfe a Plate of plyed by the Gircle, which showed the

houres, till about Two in the Afternoon After which time, as the Sunne declined, the other Horne of the Crescent began to shew the houres, till Night. And thus, of the Twelve houres of the Day, the Circle alwayes shewed foure of them; that is to say, from Ten, to Two in the Afternoon: and this Part of the Day is still called, by the Easterne men, Mid-day, or Noone; dividing the Day naturally into three parts; Morning, Noone, and Evening; as having long since lost the use of Dials; as Scaliger had observed. As for the houres of the Night, they were found out upon this Instrument, by the Moon; by casting its shadow upon little Pinne of wood, wherewith one of the Holes of the Circle, round about which the Howres were described, was to be stopped every day: So that this Pinne which appear red on the top of it, served instead of a Stilg or Cock of the Diall; which the Greeks call γνώμων. If I had not found some Difficulty in this Obscure Description, I would have here setdown the Figure of it, and the manner how this Diall is to be made. But I had rather be filent, in things that I doe not fully understand, then to speake by ghesse: some better leasure may perhaps give me Opportunity, to discover This Secret, and to communicate it to the world. At present Ishall

only adde, that *fonathan's* Paraphrase calls This Instrument, whether it be a True one, or not ; ציוחאבן שעיא, Tfourat Even Schagaja; Figura Lapidis Horarum.

6. And here Aben-Efra observeth, that those Sun-Dials, which were use to set up in Gardens, for Ornament sake, have some kind of Resemblance, with This here described: and he makes a Doubt; whether, or not, the Fabricke of them hath not been borrowed from, or made in Imitation of this Instrument. For, if you but consider the Hollownesse of the Figure, in the upper part of these Garden Dials; you will find, that it is not much unlike a Crescent; the Ball, or Globe in the Midst being only wanting; so that the Houres are described in the Hollownesse of the said Crescent, and in stead of the Hornes of the Crescent, a Gnomon of Wood, or Iron, by its shadow, points out the houres. And this is the Instrument, which was most in ule, among the Ancient Romans, called by Writers, Concha; as Munster testineth, who was a man of very great knowledge, as in many other things, so in this also. Erat Prafat. primo, faith he. apud Antiquos Concha Hemi- in Hocyclea, lineis debità proportione distincta; cui graph. pralongus ex are, aut ligno baculus, Soli oppositus, supereminebat; et ejus umbra, in lineas incidens, horas oftendebat.

CHAP. X.

That the Astrology of the Ancient Hebrewey

Ægyptians, and Arabians, was not such
as it is delivered by Scaliger, Augustina

Riccius, Kunrath, Duret, and Vigo
nere.

THE CONTENTS.

I. He Holiest things are often mixt with Fables.

2. The strange Fancies, and Falsehood of Duret, touching the Spirits of the Planets, and, touching the Astrological Cabale of the fewes.

3. The Fooleries of Carlo Fabri, in his affiguing of the Angells, proper to the seven Electors of the Empire.

4. The Strange Doctrine of Riccius, and Kunrath, concerning the Planetary Zephirots.

5. The Starres, the Cause of the Diversities of Religions; in the Opinion of R. Chomer.

6. The Nativity of our Saviour Jelus Christ, erected by Bechai, and Cardan.

7. The Astrologicall Pictures, or Figures at the Conjunctions of the Celestiall Signess (falsely,

(falsely attributed to the Ægyptians, and Arabians,) what they were, and by whom invented: against Scaliger.

Ut that we know, that in point of Learning, especially when it is of any Antiquity, and of a Nature so Quaint as this is, it is very

ture so Quaint as this is, it is very Hard to discover all the Secrets of it, without encountring also with many Vanities, it must appeare very strange, that I should here reject, what Scaliger chiefly, (a man who hath been deservedly esteemed one of the most Learned of our Times,) hath laid down for Truth, in the Traditions of the Eastern People. But they, who have read those Books, that beare these Titles, De fuga Maria: De gestis Foleph : Historia Regum : Sortes Apofolorum, and many others the like, may eafily be able to judge, that seeing the Most Holy things cannot make their pallage, through the fuccessions of Many Ages, without being mixt with many Vaine, Fabulous Stories; it is no Marvell, that Thole Things, that are of a Lower, and more Indifferent Nature, should not be able to preserve themlelves in their Originall Purity. The Astrology of the Hebrewes had not as yet lost any of its Lustre, so long as it was practised by those of That Nation Only: but so soon as the

more Northern Nations began to have a. ny knowledge of it; they presently fell to venting of fuch Strange, Wild Fancies, and to increase the Number of Fables in such some as that it is no Maryell, that this Science hath beene fince so much cried downer. I hold it therefore Necessary, before I descend to that which we have of Puritic, and Truth, in this Science, to give a Touch first at That which is False, and Corrupted. And this we shall doe, if we but set down part of that, which hath been written of this Subject, by the afore-named Scaliger, Riccius, Kunrath, Vigenere, and Duret; it being an casie matter afterwards for any man, to discover the like Imposture, in all the other Authors, which are leffe Confiderable. The First, Second, and Third, of these above-named, doe unjustly attribute to the Jewes such a kind of Aftrology, as they never were acquainted with: the Fourth will needs have them to have acknowldged, in the Secrets of this Science, Certain Spirits; which never had any Being, fave only in his own Fancy: and makes them to have been the Authors of a world of Fopperies, which have been forged by the Greeks, and Latines, upon this Subject: And the Last of them makes such a Strange, Wild thing, of the whole Doctrine of it; and sets it forthin so Grosse, and Ridiculous

diculous a Dresse; as that his Book deserves very justly to be ranked with the Fables of Merlin.

Unheard-of Curiosities.

2. To begin then with Him; if you have a mind to have a Tast of him, see but the 20.4 Chapter of his History of Languages: where, after a long Discourse of the Jewish Curiofities, which he explaines after His manner; he comes at last to his Tables, or Figures: the First of which sheweth the Myfleries of the Unit, number of Two, number of Three, and number of Foure: to whom he assignes these Four Good Angels; $A R I E L_2$ THARSIS, SERAPH, CHERMB; and their Foure Spirits, which, he faith, are called, MAHAZAEL, AZAEL, SAMAEL, AZAZEL: then, the Foure Seasons of the Year; the Four Gates of Heaven, the Four Quarters of the World; the Foure Angels, that rule over them, the Foure Rivers of Paradife, the Four Winds, FAVONIUS , SVBSOLANUS, AVSTER, AQVILO; with their Four Spirits, PAYMON, ORIENS, AM-MONIVS, EGYN. Very Pretty Stuffe, this! which he fathers upon the Jewes; although in Truth it never had any Being, have only in his own Fancy; no more then those other Fooleries, which he hath vented in his Second Table. For, as concerning

the names of the Angels, which, according to the Opinion of the Ancient Astrologers; have their Residence in the Seven Planets! he is right but in one of them: all the rest being either Corrupted, or else Invented by Himself; as will appear to Any Man, that shall but compare them with the True Ones, set down by Aben-Are, who is translated into Latine by the Conciliator. As for those Seven Intelligences, which Duret hath assigni ed to the Seven Planets; he had need be a very Subtile Theologist, that can shew any Reason, why he makes a Distinction betwin the Seven Spirits, which he calls by the names of SEMELIEL, NOGAEL, COCHABIEL, LEVANAEL, SA BATHIEL, ZEDEKJEL, MADI MIEL; and their Intelligences, N A-CHIEL, HAGIEL, TIRIEL, E. LIMEL, AGIEL, FOPHIEL, GRAPHIEL. But may we not very well laugh at Carlo Fabri, an Italian; who had fince translated these Fopperies into his own Native Language; (and hath befides given Other strange Names to these Angels ; the most of which he harh taken out of Raziel, Picatrix, Agrippa, and a Book entituled, Lu Clavicules de Salomon;) of all which, Durd will need have us believe the Hebrews to have been the Authors; as likewise of the Twelve

Intelligences, that belong to the Twelve Months, & of those, which reside in the Twenty Eight Mansions of the Moon; which he sets down, in his Third, and Fourth Table; but so Childishly, that being not able to find any Character for the last Mansion, (for there are but Twenty Seven Hebrew Letters, reckoning also the Finall,) he is fain to make use of a Latine O; and will have this Cyr pher, in the Predictions of his Fantasticall A? firology, to fignific INVNDATIONS, caused by the Intelligence AMNIXIEL, in the Mansion ALBOTHAM. now tell me, if he had not very good Reason, to devise these strange words, for the better Confirmation of these Chimera's. For , why, we are to take notice, that here is no , such stuffe, as the Ancient Inchantments of ,, Toledo, or the Air Magick of Raziel, or ,, Picatrix; but all Excellent, Naturall Se-"crets, and things well worthy of our feri-5, ous Contemplation. What Beafts should we be, should we but suffer our selves to be lead by the Nose by This Man ? And, what a miserable Condition were we in, had we no other Judges in this Particular, then Him, and Vigenere; who would notwithstanding feem to be very Learned in these Mysteries; endeavouring, as the other hath done, to make us take up, upon his Account, for Solid Doctrine,

before, I do not remember ever to have read any thing so Ridiculous, as that, which He seudo di hath written of These same Spirits. For, Christo, as if he had spent one part of his Time in Heaven, and the other part in Hell; he gives you an Exact Account, as he thinks, what Angels are proper to all the severall Princes in the World; assigning to the Seven Electors of the Empire, those which are acknowledged to be of greatest Power: as namely, to the Arch-Bishop of Mayence, who

Arch-Bishop of Treves, High Chancellow of France, and the Second Electour, G.A. BRIEL; to the Arch-Bishop of Collen, High Chancellour of Italy, and the Third Electour, RAPHAEL; to the Count

Palatint

is the Primary Elector, and High Chan-

cellour of Germany, MICHAEL; to the

Palatine of the Rhine, the Fourth Electour, URIEL, to the Fift, which is the Duke of Saxony, SCEALTIEL; to the Sixt, which is the Marquesse of Brandenburg, FE-HUDIEL; and to the King of Bohemia, who is the Seventh, FERECHIEL. And now, who can choose but laugh at this Pretious Doctrin?

Unheard-of Curiolities.

4. That of Augustinus Riccius, of Kunrath, and of some of the Later Rabbins, is altogether as. Impertinent; where they affure us, that the Ancient Hebrew Astrologers disposed of the Ten Zephiros, in severall Parts of the Heavens; allotting Seven of them to the Seven Planets, which are the Authors of all those Effects, say They, which we impute to the Stars; distributing Good, and Evill Fortune to Mankind. His itaque Zephiros, (laith Riccius,) sive Ideis, Mundi corporei regimen, quasi immediatoribus Diss non secus quam & Astrologi, Septem Erraticis Stellis, Terrenorum Dominatum adscribunt. They goe yet farther then this, and fay, that Moles, who was a Learned Astrologer, making use of his knowledge in these Secrets, gave the Jewes Those Lawes; which he grounded upon the Harmony of these Planetary Zephiros. As for Example: He instituted the Fourth Commandement, RE-MEMBERTO KEEP HOLY THE S A B-

SABBATH DAY; because this Day was governed by Saturne, a Malignant Planet; who might cause those works, that were undertaken on This Day, to be Unprosperous: and that Moses therefore thought it fit, that the people should rest on This Day. The Fift Commandement, HONOVRTHY FATHER AND THY MOTHER, hath Reference to the Sphere of Jupiter, which is a Benigne, Favourable Star: the Sixt, THOV SHALT NOT KILL; to Mars, who hath the Government of Wars, and Murthers: the Seventh, THOY SHALT NOT COMMITADIL TERY, to Venus, who rules over Concupiscentiall Motions: and so of all the rest, to which he hath fitted fuch strange Chimmera's, as deserve to be ranked with those Extravagant, wild Fancies, which Gemma Frisius hath inserted into his Ars Cycloguemica; and those other that Cichus Asculanus hath forged, upon the Sphere of Jol The fore-named Authors de Sacrobosco. fay moreover, that it is from this Astrological gy of the Zephiros, that the Cabalists report the Patriarks, and Prophets, to have denved all their Divine Knowledge. ratione, faith the same Riccius, Cabalista que que Patriarchas, Prophetasque, quemlibet cuillbat harum Sephiros imperio, atque afflatu sub 12C2Hnl

jiciunt, prout quivis illorum certum Divinitu-

5. Chomer addes, that these very Planeta- In Gal Revolutions of the Changing of Kinds migra. Kevolutions, of the Changing of King- chim. domes, and Religions: which is conforant to what Cardinall de Alliaco hath cited out of Gulielmus Parisiensis, who saics, that some Desider Astrologers affirm, that the Diversity of Beleg. Religions hath been caused, by the Aspects & set. of the Planets: as, that of the Fewes, by the Influences of Saturne: by reason whereof, this Nation hath alwaies been Miserable, and is at this time, and ever shall be so; because that the Planet, on which their Religion is founded, is a Malevolent, and an Unformnate one; rendring them also Covetous, and Perverse, and great Lovers of Saturday, which is the Day, dedicated to Saturne. That of the Turkes, is governed by the Planet Venus: and this is the reason, that this People celebrate Friday; and are likewise extreamly addicted to Luxury; and that in so high a measure, as that they believe, the chiefest Happinesse, in the Life to come, consists in this Brutality. The Christian Religion, (say they in like manner,) hath received its Foundation from the Sun; for which cause they have Sunday in great Veneration, being the day which is governed by this Pla-

net: and that by Vertue of Its Beames, the Chief Visible Head of the Christians hath sales his Seat in a Solary City, that is, Rome; which City had its First Stone laid; when the Sign Leo was the Ascendent; which is the Proper House of the Sun; and was afterwards built, in the form of a Lion. is also very Observable, or rather very Extravagant, which Cardinall de Alliaco repons, out of these Astrologers; who saies, that they affirm, that according to these Principles it is, that Cardinals go in Red, which is a Solary Colour, and fuitable to this Planet, which was the Founder of their Religion. All other, say They, as Arrians, Armenians, Lutherans, and the rest, are caused by the Conjunction of Diverse severall Planets, which hath caused this Mixture.

upon such Fooleries as these, and who hath examined our Religion, with too much Tannesse, goes yet farther then all this, and saies; that Fesus Christ, (whom notwithstanding he will not acknowledge to be the Messias,) in Order to this Foundation, was raised again upon the Day, which, as wee have said, is assigned to the Sun; and that having been a Man Perfectly Solary, he was consequently very Beautifull, and of a Faire, Lovely Countenance; and of a very Quick,

Quick, and Daring Spirit as may appear, feith He, by that Act of his, in driving the Buyers and Sellers out of the Temple; and by his disputing with the Doctors of the Law, at the Twelfth year, of his Age. How happy had this Rabbin been, if he could but have raised to himself, from these Marvellous things, the Foundation of his own Salvation & But leaving him to his own Darknesse, we observe (since we are insensibly fallen upon this Discourse, which yet we make Mention of with all possible Humility,) that, in the Nativity of our Saviour Christ, he comments no whit agreeth with that which Cardan hath in Ptol. erected, in For the fairblandafter that he hath told us, that there were Five very Observable things, in his most Adorable Nativity, which show what manner of Man he was,) that Saturne, having part in his Geniture, rendered him Sad, and Pensive: whence Folephus also took occasion to say of him; Vi-Jus est seprits flere, ridere nunquam. And for the lame, reason, also he seemed to be Older, then in Truth, he was: For The Sorrowfull Spirit drieth up the Bones: and for This Gaule it was, faith He, that the Jewes took him to have been forty yeares old at least, when they faid unto him; Nondum quinquaginta annos habes; Et Abrahamum vidithe proceeds, and saies, that this Plaüć£

ner meeting with Venus, was the cause of his having/certaine red Specks in his Face, following lowing the afore-named Folephus; who faies, that he was Lentiginofus in Fucie: which movodi Cardan to say, Quod si a Deo omnia su Affent profecta, quorfum erat Lentiginolum creari ? But let us now leave this Point, which we have touched upon, only by the -By sand proceed to the other forts of Astrology, which are falfly attributed to the Hebrewes, and to their Neighbours.

Baxb. Manily : & Jeg nov.Ed.

7. That which Staliger hath produced, Ansples though it feemeth to have better Grounds, then those other Kinds which we have before fol.487. spokeniofi, yet nevertholesse was it never prachied, nor acknowledged by the Egyptiant; and therefore much leffe by the Fews. How ever, the Curiofity of it makes me willing to give the Reader a Tash of it; and it is, as followeth. The Planet Mars, being in the first Degree of Aries, they represented a Man, holding a Sickle in his Right hand; and in his Left, a Bow: In the second De gree, a Man, having the head of a Dog, and holding a Cudgel in one hand, and having the other stretched forth: In the Third, and ther Man, lifting up one hand to Heaven, and in the other, seeming to point avall, that is in the whole Universe: In the Fourth, 2 nother Man again, with curled Hair, having a Hawke

Hawke upon his Right Hand, and in his Lest a Flaile, In the Fift, two Men; one cleaving wood with a Hatchet; and the other, bearing a Scepter in his hand. The reft of the Degrees have their leverall Figures alfo, which I shall passe by, that I may come to the fecond Signe, which is Taurus: into the First Degree whereof when Mercury entered, they pictured a Man, holding a Cudgel in his hand, with which he drives an Oxe to the Shambles. In the Second Degree, a Woman, holding in her hand a Horses taile, In the Third, an Old Woman, covered with a Vaile; or else a Woman in Breeches. the Fourth, another Woman, holding a Whip. And that I may trouble my felfe no further in reckoning up all these Figures, the Reader may see them, if he please, in the foresaid Booke; where Scaliger saies, that he hath taken them out of the Writings of the Arabians, and that these kinds of Pictures were in use among the Egyptians. But, (with all Respect to so great a Scholler be it spokm) I must take leave to say, that he was never to farre wide of the Truth, as Here: and irany be so Curious, as to desire to be satisfned in this Particular, he may be pleased to take notice, that Scaliger hath transcribed them word for word, out of a Second Book of a Worke entituled Astrolabium Planum, where U 4

where they are all represented, by Figure cut in Wood, and are the Invention of Patrus Aponensis, otherwise called, the Conciliafor: being the very fame, which he caused to be painted, in the Great Hall of the Palace of Padua, where they are yet to be seen. The Truth of this may be proved, by the fore-named Booke of Aponensis, whose very words he hath also made use of: but contenting himfelfe with the bare Names of these Figures, he would not trouble himselfe with the Graving of them. I shall only adde, for the greater Confirmation of what I have faid, that this Astrolabium Planum, where these Figures of Aponensis his Devising are to be icen, was printed at Venice, by Emery de Spir, An. 1494. I should not have here made this Observation, but only that I might be the better able hereafter, to make knowne the Vertue of the Astrology of the Ancient Hebrewes; which was, in a manner, the same with that of the Agyptians, and the more Learned among the Arabians: out of whole Bookes, Scaliger vainely faies, that he hath bestowed much paines in collecting the laid Tigures. For there hath long fince been such a World of Strange things, which never had Being, foisted upon this Science; that people generally now adaics sticke not to say, to the great Disadvantage of Antiquity, that there

there is no Truth, or Certainty in these kind of Studies. I thinke it necessary therefore, for the better Informing of those, who are thus abused, to declare, what it was that moved Aponensis, to represent these different Postures of Men, Women, and diverse kinds of Living Creatures. This Learned Astrologer having observed, that those that are borne under certaine Conjunctions of the Planets with the Signes of the Zodiack, were alwayes inclined to one and the same thing; as, for example, the Planet of Mars being the Ascendent in the First Degree of Aries, those, that are then borne, are commonly Laborious, and lovers of War; he figured a Man, as we have faid, holding in one hand a Sickle, which signifies Labour; and in the other a Bow, the Hieroglyphicke of War. In like manner, those, that are borne, when the same Planet is in the Second Degree of the same Signe, are Quarrelsome, and Envious, as-Dogs: and this made him represent a Man with a Dog's head, holding a Cudgell in his hand. The Figure of the Third Degree, shews that the Child will be a lover of Peace. The Fourth, that hee will hardly be Rich, scattering about what hee shall have gotten, which is fignified by the Flail, and the Hawk. When Mercury is found in the First Degree of Taurus, the Child will be addicted to Blood,

...

Blood, and Butchery: and therefore he figured a Man with a Cudgel, driving an Oxe to the Slaughter-house. If in the Second Degree, he will be given to Idlenesse; as the Woman, that holds a Horf-taile in her hand! If in the Third, a Woman will defire to marry in her Old Age, and endeavour to be thought young; according to the Figure of the Old Woman, that is covered with a Vaile, or else wearing a Paire of Breeches. If in the Fourth, the Child will be Quarrelsome; which is fignified by a Woman, figured with a Whip in her hand. And so of all the rest, as you may see in the Author himfelfe. We may conclude then, that these Aftrological Devises are no more of the Hebremes, and Egyptians inventing, then the Brazen Horle is of mine.

CHAP.

CHAP. XI.

yVhat, in Truth, was the Course the Patriarkes, and Ancient Hebrewes tooke in their Observations, at the Erecting of a Nativity.

THE CONTENTS.

I. THE Celestial Constellations were anciently marked with Hebrew Characters.

2. How the Celestiall Signes are figured in the Spheares, and Globes of the Arabians. That of Virgo hath a Mystery in it.

3. A new Observation, on the Hebrow

Names of the Planets.

4. A Table, by which the Jewes erected their Nativities. The use of it.

5. Demonstrative Reasons, why the Daies follow not the Order of the Planets. A Genethliacall Table of the Ancient Hebrews.

6. The Difference betwixt the Ancient's manner of giving Judgement upon a Nativity, and that of the Astrologers of our Times. The Fable of Lucina laid open.

7. The Moon, why called Lunus, and Luna, and the Heavens, Coelus, and Coe-

lum.

&. A-new, and Certaine Reason, why the Poets

Poets report, that Saturne eat up his Chil-dren.

9. What Qualities the Ancients acknow. Ledged to be, in the Gelestiall-Signes.

frologicall Writings of R. Abraham Aben-Are, translated into Latine by the Conciliator.

by the Ancient Hebrews. What Ceremony the New-married Manufed, toward his Bride.

12. This Astrology of the Ancients is proued out of the Holy Scriptures. Reasons, which prove, that 71 Gad, (which was the name of one of the sonnes of Jacob,) is the Planet Jupice.

13. The Agyptians the First, that corrupted this Astrology. It is False nowithstanding that they were the Inventers of the Characters of the Planets. Fables introduced into Astrology by the Greeks.

14. Athlon, a word in Nativities, used by Manilius, rightly interpreted, contrary to Scaliger.

Ow that we have seen, what is Fallly attributed to the Astrology of the Ancients; it remains, that we in the next place shew, what we have

discovered of the Purity, and Truth of it, in

the Writings of those, who have handled this Subject; and which are fuch, as have been esteemed the most Free from Trisling, by the Learnedit Men of Our Own Nation: I shall then make my Collection of these Secrets. which the world hath hitherto had little knowledge of, partly out of Rabbi Moles, to whom Scaliger hath given this Testimony: † Primus inter Hebraos nugari defivit: and † Iulib. partly out of R. Aben-Efra, whom the same Horaior. Scaliger calls, Magistrum Judaum; Et homi-inlimis. nem supra captum Juda orum. Out of R. E. Thorab. li, whom Augustinus Riccius cals, Virum uti- Neb 415. que Scientiarum omnium plenum. Out of R. Tamin, Ilaac Hazan, whom the Fewes conceive to GARAS. have been the Author of the Astronomical Lib. Mil-Tables of Alphonsus. Out of R. Abarbanel. barnet. R. Isaac Israelita, R. Facob Kapol ben Samuel, hastien, Aben-Are, R. Chomer; and some others of 66.000the most Learned, and Knowing men of ir. Aver-This Nation, as their VV ritings testifie of met. hathem.

First then, the Ancient Hebrewes represented the Stars of Heaven, either All Together, laghed ted the Stars of Heaven, either All Together, laghed or severally, by the Letters of the Alphabet; In aghinthe same manner expressing, and distinguing them, as we do, by the names of Aries, sum.

Taurns, &cc. And when all the Letters of the Hebrew Alphabet, or what other soever they were, (for I shall-cleare this Doubt some o-

ther

ther time,) were ended; they then went onto expresse the rest of the Stars by Two Letters together, by this means, making upa Word: to which also they added a Third Letter; the more perfectly to expresse the nature of the Star, or Constellation. And perhaps a man may be able, by this Doctrine, to put afrend to that Long Dispute, that hath been raised, concerning the Signification of those names of Stars, which we meet with in the Bible:as, for Example, wy, Ahs, in Amos; which is Interpreted, Arcturus; or, as Aben-Efra will Mais 6 have it, Vrfa. Now we know very well, that Thren.2. py, Ahs, fignifies not Vrfa, neither in the Ho-Den.7.5 ly Scriptures, nor in any other Author: but the name of this Beast in Hebrew, is 317, Do, as you may see in Isaiah, Feremiah, and Da-These two Letters therefore, wy, joyned together, might perhaps be only the bar Characters of the Constellation of Vrsa Ma-

2. And by this we may see, that the Ancient Hebrewes fancied not the Figures of any Living Creatures in the Heavens, as we do. The Ancient Arabians imitated the Hebrewes in their Astrological Practises, as Aharband testifieth: till at length, the Example of the Greekes, made them make use of Living Creatures. Yet notwithstanding they forbate to expresse any Humane Figures; as having

in Eve to the Zeale of the Hebrewes. they represented the Signe of Aquarins, instead of the Figure of a Man pouring out of water, by a Mule with a Pannell on it, and laden with too Vessels, or Barrels: of Gemini, by two Peacocks: of Virgo, by a Sheafe of Corne: of the Centaure, by a Horse: of Ophineus, by a Crane, or a Storke; as is to be seen, in some Arabicke Globes: of sagittarius, by a Quiver: of Andromeda, by a Sea-Calfe: and of Cepheus, by a Dog: and loof the reft. The Egyptians also, and Persians, following herein the steps of the Hebrewes, represented the Stars, only by certaine Characters; till that the Example of their Neighbours drew them also at length, to set downe the Figures of Living Creatures; as the same Author testifieth; who saies, that the Persians Chiefly, and after them, the Indians, and Egyptians, expressed by Figures, not only the forty eight Constellations, which are represented on the Globe; but also all other Figures that they could imagine, at the Beginning of every Principall Signe, and in each Degree of it : as appears out of Zadchir. In Afr. The Figure, by which they expressed the Ind. Signe of Virgo, is one of the most Remarkable; and which hath also moved some of the More Learned Arabians to speak well of our Saviour Fesus Christ, and of his Blessed Mother,

Mother. And indeed it is not without some Mystery, that the Tradition of the East representeth this Constellation in the form of a Faire Damsell, with a Comely long head of Haire, which seems to adde much Grace to her, while she reacheth forth two Ears of Corn, to a young Child, to whom the feemeth to give Suck. Intentio est, (saith Alboa-Zar, who is falfly called AlbumaZar, and is translated into Latine by Hermanus Dalmat, quod Beata Virgo habeat figuram & imaginem, infra decem primos gradus Virginis; et quòd nata fuit, quando Sol est in Virgine, et itahabetur signatum in Kalendario, et quòd nutria filium (uum Christum Fesum, in terra Hebra-Whence the Author of the Book, which is intitled, Vetula, took occasionto lay,

O Virgo fælix! O Virgo significata Per Stellas, ubi Spica nitet.

3. The Indians then, the Egytians, Perfians, and Arabians, having all thus introduced the Figures of Living Creatures into their Astrology; the Hebrewes were necessitated to imitate them, in some sort; and to take up, though not their Figures, yet the Names of them at least. Yet did they neverthelesse abstain from the very Names also, of those Figures

Figures of Men, which the Arabians made use of. Thus they call Aquarius, "77, Delizing which signifies, not a Man, but a Vessell to take up water with: Sagittarius, Fup, Keshet, which fignifies only, a Bow: Saturne, שבחשי , Scautai, Rest: Mars, ביישה, Maadim, Red; which is the Colour of this Star : Venus, ווה, Nogah, Brightnesse; à name very sultable to this Planet : Jupiter, pry, Tjedek; Just; because it makes them so, that are born under its Influence: Mercury, כוכב, Cocab; fignifying only, a Star; or else, כחב, Catab, to Write, or Writing; because this Planet is very Favourable to Learning. And there is but one only Signe, of all those that have any Humane Figure, that hath retained the Humane Name, save only that of the Virgin, which is called in Hebrew בתורא Bethola; not without some Designe in it; although it is often called by the Rabbins, שבלת, Shiboleth, the Eare of Corne! So true it is, that those of This Nation are not only very free from Idolarry; but even from the Name also, of what ever they conceive to be an Idol: which hath not been hitherto observed by any man. Let us now reurn to their Fore-fathers, who knew nothing of any of these Names, in their Astrology.

This way of Expressing the Celesti-

all Constellations, by Letters and Characters, being presupposed; the Ancient Hebrewes, when they went about to erect a Nativity, observed on what Day, and under what Signe, the Child came into the world, and what Planet ruled, at the houre of its Birth: all which Particulars they afterwards fet down in Twelve Places, which they cal-Ted m' nnn, Machataloth, that is to fay, Ligatura. Ben David saith, that these were the Tame, which the Astrologers now call, Howses. Now these Ancients had perfect knowledge of all the Particulars above specified, by looking on the Table hereafter described; which R. Kapol Ben-Samuel hath rescued from Oblivion, in his Book intitled, שמיקים וכל רב־ קשה Ahmouk ahmoukim, vecol devar kalchah; Profunditas Profunditatum, & omnium rerum difficilium, which was Printed # Cracovia, An. 358. according to the Jews Later way of Computation; which answer eth to the Year of our Lord, 1498. I borrow of this Learned Jew, a great part of the Astrological Curiosities; and I do it with so much the more Confidence, in that he was accounted one of the best Astrologes of his Nation; having diligently examined, all that the most Learned men had ever watten, of these kinds of Antiquities.

The

This Table seemes something Difficult at the first appearance: and yet it is not so, if a man but consider; that the Seven Letters of each Row, running from the Right hand toward the Left, or from the Left hand to the Right, significe the seven Planets; and these are the first Letters of their severall Names; which are these following.

שלחאני Schautai, Saturne, Saterday.

Tfedek, Fupiter, Thursday.

Maadim, Mars, Tuesday.

הארים Chamah, Sol, Sunday.

הארים Nogah, Venus, Friday.

ביכבל Cocab, Mercury, Wednesday.

Levanah, Luna, Munday.

Now, if I would know, what Planet rules, at the first houre of the Night on Saterday; (that is to say, the first houre after Sun-set:) I presently have recourse to the Table; where having found the Letter w, which stands for Saturne; I say, that this Planet rules at that houre. And so, going downe along that Columne, under the said Letter; I find that Fuptter, which is noted by this Letter, y, rules at the second houre; w, that is to say, Mars, at the Third; r, the Sun, at the Fourth; 1, Venus, at the Fift; w, Mercury, on the Sixt; the Moone; on the Seventh; and againe, w, Saturn;

w, Saturne, on the Eight; w, fupiter, on the Ninth; D, Mars, at the Tenth; n, the Sun, at the Eleventh; and lastly, 1, Venus, on the Twelfth. Then going downe further, in the same Column, I find that D, Mercury rules, over the First houre of the Day; h, the Moon, over the Second; and so of the rest,

5. And yet there may be two Doubts raifed, upon this Table. The First is, why it
should begin with 2, Mercury, which is the
Planet of Wednesday; rather then with 17. Sol,
which is the Planet of Sunday? seeing that
This Day was the First created.

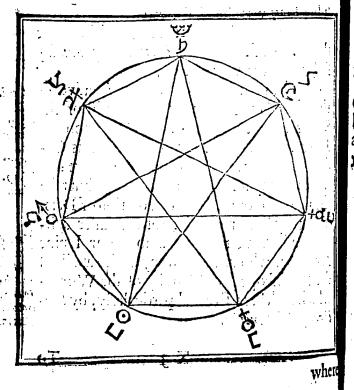

The Second is, why the Dayes follow not the Order of the Planets? Or, why sunday followes next after Saterday?

that the Planets, as well as the rest of the Live Starres, were made, or Created upon the quad information of the starres, were made, or Created upon the quad information of the starres, were made, or Created upon the quad information of the starres, were made, or Created upon the quad information of the starres, were made, or Created upon the starres, and one may see saith He, that will but take solution, as any one may see saith He, that will but take solution, as the pains to compute the Revolution of Dais. You may have recourse, for the fuller satisfaction herein, to those among our Latine Not. So Authors, who have taken any notice at all, of in Manil, the Horoscope, or Nativity of the World; In sphere which hath been Erected particularly, by Sea-tobose. liger, and Iunction.

Patt. 5

Ť

To the Second Doubt, We answer; that the Daies observe not the Order of the Planets; because that, according to the Order that they are ranked in, they make in their Courses, by an Equal Intervall, as it were seven Angles of a Geometrical Figure, which is called Isosceles, or Equicrurall; the Bases whereof, are the sides of a Heptagone, described within a Circle; as you may see in this Figure following, which more clearly explaines the Motions of these Planets.

where you see, that on the outfide of this Figure, all the Planets are set in Order; mr קונכץ Saturne, Jupiter, Mars, Sol, Venus, Mercury, Luna. Within the igure, you see it is otherwise : for, from w, Saturne, you passe to n, Sol; from hence, to , Luna; from Luna, to D. Mars; from Mars to D, Mercury; from Mercury, to x, Jupiter; from Jupiter, to), Venus; and from Venus, to Saturne againe; which motion makes in Order the dayes of the Weeke, Saturday, Sunday, Munday, Tuesday, Wednesday, Thursday, and Friday. But now all the Characters of these Tables, are according to the Modern Jewes. The Ancient Table, from which R. Kapol Ben-Samuel drew that before set downe, is This that followeth, wherein you are to procccd in the same manner, as in the other: Only the Planets have other Characters; which arethese: 7, Saturne, D, Jupiter, , Mars;), Sol; ; , Venus; D, Mercury; y, Luna.

4 THE

THE ANCIENT GENETHLIACAL TABLE OF THE HEBREWS.

| בונמרגמונו מת עסיים מרעסיין | מינים וב שמינים ב שמינים בשמינים מינים ב | משלים בו משלם בו משל מברם בו משל | יונמ עסייושמיע סיינן מיעסיינן מיעס | The Signes for the Beginning of the Night. The Signes for the Beginning of the Day. | The 24. Hours of the Night |

|-----------------------------|--|--|------------------------------------|--|----------------------------|

6. These Ancient Fathers then, having found out the Planer that ruled at the Nativity of a Child; they presently began to foretell, in Generall Tearmes, according to the Quality of the Signe, what manner of Person it was like to be. I say, in Generall Tearmes: not standing to reckon up so many Particulars, as Astrologers now a daics doe: who will undertake to assure us, that if a Child be borne in an houre, for Example, that Saturne governes, it will be an Arrogant, Sloathfull, Dreaming, Melancholicke, Subtle, Wary, Impudent, Sad person; and shall love Black things, be very Meager, and Leane, shall have much, and black Haire, shall be Pale, Envious, Hollow-eyed, given to stealing, shall keep his Anger long, will be stubborn, and lelte-conceited, and shall not much care for the company of Women; he will 100n grow gray, and shall not be very rich; he will be a hater of all Company, and will be given to talke to himselfe; and, above all, will be a faithfull keeper of Secrets. Ancient Hebrewes, I say, took no notice of all these Particulars; neither did they admit of any Distinction of Signes Humane, and Brutish; Double, or Single; Right, or Crooked; Terrestriall, or Aquaticke; Fruitfull, or Barren; Strong, or Weake; Lying, or Standing; Seeing, or Hearing; Loving,

Loving, of Hating; that is to fay, that they are the Authors of Seeing, Hearing, Loving, Hating, and the like; All which Effects are specified by Manilius. But they faid only, that the Child would be Health. full, or Sickly; without particularizing any Dileale; that it would be Fortunate, or Vnfortunate; without specifying wherein, And, in briefe, they foretold, in Generall Termes, the Good, or Ill, that should be fall it; according to the Benevolent, or Malignant Nature of the Signes. For they faw, that Saturne, by reason of its being so Cold; and Mars, by reason of its great Drinesle, were very Malignant: Jupiter, and Venus, being Temperate, were very Favourable Stars; as also was the Sunne; and Mercury, of an Indifferent Nature. But as for the Maon, they thought so diversly of It, as that when it was at the Full, they accounted it Fortunate; but when it was Horned, they thought it to be so Malignant, as that, if a Child were borne under some certaine of its Aipects, it died not long after; or, if it lived, it would prove to be guilty of Crimes, as great, as its Temper was Blacke. And this is that, which moved the Wife Women among the Hebrewes, to write, or capie to be written upon the Walls of their Bed-chamher, at the time of their Falling in Travell, thele

these words, as Abiudan testifies :אריקם חוה את Adim , Chavah , Chouts Lilith : Adam, that is to say, Let not Lilith enter here. Lilith. Now this Lilith, is no other, then the Moon : being a name derived from The Lailah. which fignifies, the Night. I shall not here set downe, what strange Conceits the more Superstitious Jewes, that came a long while after, have vented, concerning this Demon, called Lilith; which they faid, had its Refidence, in some certaine Influences of the Moon. But I conceive, that the Greeks, and Latines, who borrowed the greatest Part of their Theology, from the Idolatrous Syrians, and Chaldeans; have, among the rest, lighted upon these Traditions of Lilith; which they called by the Name of Lucina, accounting her the Goddesse that ruled in cheife at Child-births: because they had heard say, that the Moone being at the Full, was a very Favourable Planet to Women with Child: which gave occasion to Horace, to sing thus of her;

> Montium Custos, Nemorumg, Virgo, Qua laborantes utero puellas, Ter, vocata, audis, adimist, letho; Diva Triformis.

7. But, that we may not dwell any lon-

gerupon Fables, you may perceive, that the Wise-men among the Hebrewes acknow. ledged their Good, or Ill Fortune, to have beeen caused by this Starre, as Chomer testifieth; and that either by Its being in the Full, or in the Wane: seeing that they called it by two names; by a Masculine, m Fareach, which fignified, Good Fortune; and by a Feminine, בנה Levanah, which denoted Ill Fortune. And Possibly the Latines also may have imitated them in this Particular, in these two Names of This Planet, Lunus, and Luna: which neither Scaliger, norCafaubon, searching after this Etymology, did observe. I am not ignorant, that Julius Firmicus, and the Platonists are of Opinion, that in these names, Massulus significat Virtutem Efficientem; Fæmina Virtutem ipsam, ac potentiam capientem Numinis. And if we but rightly consider this Doctrine, we shall finde it, to be very little different from the former. And perhaps, for this reason it was, that the Heavens also were called, Car lum, & Calus; as Pighius Campensis testifies, in his Themis; where he produceth this Ancient Inscription, COELVS & T-ERNVS JUPITER: Orelle, according to our former Conjecture, the Heaven was so called; because it was Favour ble to some; and either Indifferent, or else Adverse to others.

8. As concerning the Planet Saturne. these Ancient Hebrewes stood in great Dread of It: because they did observe, that those, that were borne under the Dominion of this Starre, were Melancholicke, and Sickly. And this is the reason that the Chaldeans. who gave themselves over to the Worship of many False Gods, observing, that this Starre was very Hurtfull to them; thought good, by some Sacrifice or other, to render it more Propitious, and Favourable to them. And there being no other Sacrifice more Proper for It, then that whereon It so often shewes Its sad Effects; that is to say, newborne Children; they began to facrifice of These, to this Planet under the name of Moloc, quasi מלך Melech; that is to say, a King: because it raigned Imperiously over Men; or rather, shewed it selfe a Tyrant over them, by afflicting them with Diseases, and a thoufand other Disasters, at Its owne Pleasure; as Tyrantsuse to doe. And this is confirmed also, by that other name of Baal, by which the Idol of this Starre was likewise called; which fignifies as much as Malter, or Lord. And my Opinion is, that from hence it is, that the Greekes, and Latines have taken occasion to invent the Fable, of Saturnes Eating his owne Children. I shall not here proceed any further, in fetting downe the rest

of those Choyse Observations, concerning this Moloc, which are delivered by Aben Esra; in cap. i. upon Amos, because that, besides that they Amos are not any thing at all to my Purpose; they are also too long, to be inserted here.

9. After the Observation of the Planets, siet, et these Fathers, saith Kapol, entred next upon

After the Observation of the Planets, drabice these Fathers, saith Kapol, entred next upon vocariaf- that of the other Starres, which are usually called Constellations. I shall not here bring in, what Aben-Are hath collected out of the Ancients, touching these Starres now mentioned: because I intend notto produce any thing, that is translated into Latine, and that the World hath already seen, or may see, if it please : as namely, the Workes of this Learned Astrologer, which are translated into Latine, by the Conciliator. I shall only note this by the Way, which the Translator observed not, concerning the Original Text; that where Aben-Are speakes of the Nature of these Signes; he doth not therein follow the example of the Ancients, who never descended to Particulars, as the Later Astrologers have done since; who tell us, for example, what Signes cause a Quicke Wit; and what render Men Good-natured, Courteous, and Affable; as, Gemini, Virgu, and Libra: and which make them Dull, and Brutish; as Aries, Taurus, Leo, and Capricorne : which make them Fruitfull; 25 Scorpio; Scorpio, Pisces, and Cancer: and which, on the Contrary, make them Barren; as Gemini, Led, and Virgo: and so of the rest, which are all reckoned up by this Rabbine. But they pronounced only in Generall Termes, of these Fixed Starres, which they called which they called planets, which they also called planets. Wanderers, as Reuclin hath De Art. observed.

And here, fince we are fallen upon 3. the Workes of Aben-Aré, which are tranflated by the Conciliator; I shall give the Learned this Advertisement, that the Translation doth not alwayes exactly answer the Originall; and that there are also some certaine Tracts added, which are not found at all in the Hebrew. Those Peices, that are Legitimate, are these that follow: First, a Tract entitled, Initium Sapientia; which is called by the Conciliator, Introductorium: which is indeed a very Choyce Peice; and containes in it, what ever is necessary to be observed, in the Nativity of a Child. Another, called Liber Rationum; where he discourseth of the Natures of the Signes, the Revolution of Daies, and Ages; and of those Angels, which have the Government of the world, in their severall Turnes, which is a Position maintained by Robert Flud also,

11

in his Apology for the Brethren of the Ross Crosse: as we have observed, in our Notes upon R. Elcha. Then follow in order these other Books. Liber Interrogationum. Liber Luminarium ; et Cognitio diei Critici: seu, de Cognitione causa Crisis. De Mundo, wel (eculo: which the Translator calls, Liber Conjunctionum Planetarum, & Revolutionum unnorum Mundi : where he makes a Repetition of many things, which are fet down, only in the Second Book, by the Author. It appeares then by this Catalogue, that those two Tracts, which the Conciliator makes to follow these, and intitles, Liber Nativitatum; & Revolutionum earum : and, Liber Electionum, are not found in the Hebrew: neither could I ever meet with any such Tracts, in any one of all those Copies that I have seen of this Rabbins Works: nor yet, with diverse other things, which are handled in That Collection, which the Translator calls, Tractaius insuper Particulares ejusdem Abrahæ, in quibus tractatur de Significationibus Planetarum, in duodecim domibus. However, the Learned are very much obliged unto him: seeing that, before this Translation of his came abroad into the World; the Astrology of the Hebrewes was wholy Unknowne to the Latines. But to returne. ri. We

Ancient Astrologers accounted Malignant, in the Nativities of Children: Let us now see, which were those they accounted Benigne, and Favourable; and from whose Aspects, they Presaged all Good Fortuse to the New-born Child:

Abarbanel then saith, that Sol was the Chiefest, from whom they took their Omens of Good: and this was the reason, saith the same Author, that when God caused, King Hexekiah to be borne again, as it were, the lecond time; he made choise of the Sun, to be the Sign, by which this Miracle should be wrought. Next after the Sun, they accounted Venus to be most Propitious: and perhaps from this Observation of the Ancients, it was, that next to the Sun; and the Moon, This Planet was most especially Worshipped, throughout the whole East; as it is attirmed by R. Kapol Ben-Samuel: These Ancient Hebrews acknowledged also the Planet Fupiter, (which they sometimes called, ור Gad, and sometimes also מול מור מור שוב Mazal בוכב צרק, and those that came after them, כוכב צרק Cocheb tsedek;) to be a very Favourable Star. For which reason it was, that the New-magned Man was wont to give his Bride a Ring, whereon was ingraved the fore-named words, To Sio Mazal tob; that is to fay, in the Naturall

tural fignification of the Words, A Good Stars or, Good Fortune : desiring, by this Ceremony, that She might be delivered of all her Children, under this Favourable Starre as it hath been observed, both by Munster, Aben-Ezra, and Chomer. Insomuch that the Later of these Authors affirmes, that evening His time there were some that were so Curious (as he calls them) in these Observation ons, (or rather, as we may justly fay, so Melancholick, and Foolish;) as that they would not lye with their Wives, but at some certain houres; to the end, that if they should prove with Child, they might be brought to bed, under this Starre; whose Revolutions they were most diligent in Calculating. But thele Strange Fancies are found, only among the Later Jewes; and never entred so much as into the Thoughts of their Fore-fathers, the Ancient Hebrewes; (as the same Chomu affirmes;) who observed only That, which a certain Pure Innocence dictated uno them; attributing no other Effect to the Stars, then what were meerly Naturall; and whole cautes were imprinted on these Cdestiall Bodies, by Him, who created all things in their Perfection.

12. But it is now time, that we answer this Weighty Objection, that is made against us: namely, that feeing that the Holy Scriptures make not any mention, of any of thele Astrological Curiosities, in the Lives of the Patriarks, whom we affirm to have been Calculaters of Nativities; a man may very well account them to be False, if not Dangerous: sceing they are grounded only upon the Fantasticall Conceits of the Rabbins, who are known to have been of the Faction of the Audiciary Astrologers.

Unheard-of Curiosities.

If I had not already elsewhere defended. the Innocence of the Learned Jewes, in this See my Particular, I should in this place have taken Advertise an occasion to shew, how much our Christian the Lear-Writers have injured them, by charging ned, touch them unjustly with such things, as they were ing the never guilty of. But now I shall only here Languamake it appear, that these Astrologicall Curiosi- ges. ties may be proved out of the Holy Scriptures.

For confirmation then, of what we have here proposed, we read in Genesis, that Leah, Facobs Wife, called one of her Sons by the name of Gen. 30. the Planet Fupiter, which is called Gad, under which, no doubt he was born: et peperit Zilpah, saith the Latine, following the Originall, ancilla Leah ipsi Jacob filium; et ait Leah, Bagad; et vocavit nomen ejus, Gad. The Vulgar Translation, and S. Hierome, instead of Bagad, translate Faliciter: which is the same with, Cum Bona Fortuna; as it is proved

proved by S. Augustine; who reprehendeth those, that collected from this Text, that the Ancients worthipped Fortune. Vnde videtur Occasio (saith he) non bene intelligentibus dari, tanquam illi homines Fortunam coluerint, &c. And that it may clearly and evidently appear, that the Vulgar Translation understands by n., Gad, Fortuna Bona, which is one of the Epithers, that is given to the Planet Fupiter, as is acknowledged on all hands; we need but turn to the 65. Chapter of Ilaiab, ver. 11. where the same word is rendered by, Fortuna: Vos qui dereliquistis Dominum; qui obliti estis montem Sanctum meum ; qui ponitis Fortunæ , (לנה Legad,) mensam, et libatis super eam. The Septuagint also had long before given the same Interpretation of this word, rendering בנר Bagad, in Fortuna.

Now that n Gad is the Planet Jupiter,

Aben-Esta testissicth expressly, where he saies;

that the Targum purposely retained this word,
as being the most proper for the expressing
of this Star. And Abarbanel, upon the same
Text of Genesis, expounds this Passage without any Scruple at all, thus, proper is that is to say;

This Gad is the Planet Jupiter: as you may

Thesaur. see in the Learned Pagnin; who, being a

Gad. Christian, ought the lesse to be suspected.

The Learned may also have recourse to the Great Majoreth; where this word is reckoned in the number of those Fifteen, that are written Imperfectly; and yet are read, as though they were perfect, and wanted not any Letter. And this is the reason, that in all the Correct, Hebrew Bibles, you alwaies fee this word jim the Text, exprefsed by a little Mark, which sends you to the Margine, where you find it written at length, בוך Bagad. All these things being confidered, it will appear most evidently, that this Child of Facubs, was born under the most Propitious Planet Jupiter, which is, for This Reason, called by the name of Gad; which name was also given to the same Child. Now if it be demanded; why doe we not then any where elfe meet with the like Example? Facob Ben-Samuel answereth: that This was observed, chiefly, by reason of the Jealousie, that was betwixt the two Sisters, Leah and Rachel, Facob's Wives. For, Leah leeing, that her Sister had two Children already; which made her so proud, as that She began to boast, Comparavit me Deus cum sorore mea: fearing, lest that after She should have given over Child-bearing, her Sister would have the upper hand of her, and that She thould be no longer beloved by her Hulband; She gave her Maid unto him, and cauled

caused him to goe in unto Her: and as soon as she perceived her to be with Child; she observed so well the time of her falling in Travell; that seeing her bring forth a Mar-Child, and that under the Planet Jupiter too as she had learnt to speak, from her Husband she accounting her selfe now more happy, then her Sister, would have him called also by the name of this so Propinous a Planet.

And these were the Astrological Observations of these Patriarks; which were so much the more Holy, and Religious, in that they wrought in these Good Men, a Continual Admiration of the Works of God. But, those that came after them, mixing superstition with this Astrology of their Fore-fathers; it came in a short time to be Corrupted, and to loose its First Puritie.

neighbours to the Chaldeans, of whom they also learnt this Science; were the first that filled it with a world of Vanities, or rather, Abominations: as you may see in Rabbi Miles his Ductor dubiorum; who often cites these Books: De Servitio Egyptiaco: De nitu Zabiorum: & De Arte Magica, which is otherwise a very choise Book; a part where of I have sten in Hebren, but it was Originally

nally written in Egyptian, by Centir the Philosopher. The Egyptians then were the first Authors of this Alteration in Astrology: yet were they not, neverthelesse the Inventers of the Characters of the Planets; by 3 o 2 & D: for, none of them, except one, or two, are to be found in any of the Ancient Monuments of this Nation: and besides, those that are found there, have a clear different fignification, from what at this day they have with us. And certainly, if they had defired to have represented Saturne, by a Sickle; they would have figured a Sickle; and not have set downe this Character h. which is no whit at all like it: and fo of $\mathcal{F}u$ piter, 4, of Venus, 9; and the rest. And now let any one judge, what reason we have to give any Credit, to the Author of those Collections, which are inferred at the end of Hyginus his Works; when he tels us, that their Characters came, not only from the Egyptians, but from the Chaldrans also. Chaldaica swit, (saith he) atque Egyptiaca Nota, quibus Planeta ab Astronomis insigniuntur. But he, good Man, understood not, that the Reasons, why Saturne is pictured with a Sith, or Sickle; and *fupiter*, with a Thunderbolt, were things these People never dreamt of; and were a long time after forged, by the Giddy-Y 4.

Giddy-headed Greekes, who turned all manner of things into Fables; and who thought, they should never be taken for men of worth; unlesse they invented, and published to the world, these their Fooleries; which have since wrought us this Unhappinesse, that we have but a Dark, Confused Notion, of the Wisedome of the Ancients. So that, endeavouring to give us a New Kind of Astrology, which was stuffed up with Fables; their Horoscopes were erected upon an infinite Rabble of False Deities, which they assigned to the Stars. And thus at length, they began to teach, that the Planets themselves were Gods; whereof some were of a Gentle, and others of a Sterne Nature; calling Saturne, by reason of its Malignancy, reputitions which is the name of a Certain Goddelle, the Revengeresse of Injuries; so called, say They, ab Indignatione. Jupiter was called vinn, Victory: Mars Tonua, Boldnesse: The Sun, ayadosaiuan, the Good Demon : Venus, Epos, Love: Mercury, avaign, Necessity: and the Moon, ayadi rixin, Good Fortune: scarching after the good Fortune of the Child, in these Appellations, which they called, Sortes Fortunæ.

14. Now as it was their Designe, to imitate the Ancients, and to follow them in their Inventions: So did they notwithstand-

ing endeavour, either to corrupt their Doctrine, or else to adde something to it: that they might not be thought to have borrowed the Whole from any body: fuch is the power of Ambition, and Vain-glory. Thus in the twelve Houses, wherein the Planets mutuall Aspects to each other, throughout the Signes of the Zodiacke, are set downe; they thought fit to foretell of the Child, not such things as take their Originall from the Instant of the Childs Birth, which are called Congenitæ; and which the Ancient Hebrewes also observed; but, from those rather, that happened after its Birth. Those that are defirous to be fatisfied herein, may have recourse to Scaligers. Notes upon Manilius; where he fets downethe manner of erecting this kind of Theme, or Figure of a Nativity: where the First House shews, that the Child shall be a House-keeper: the Second, that he that be a Souldier, and a Travailer, the Third, that he shall be a man of great Employment; and so of the rest.

These Houses, Manilius calleth, Athla; as, for example, when he would say, the First House, he saies, the First Athlon; or the Second, the 2^d. Athlon, &c. Whereupon Scaliger takes occasion to refute Picus Mirandula, and fo. de Roias, a Spaniard, for saying that these Athla, mentioned by Manilius, were

ıng

were only the Theme of a Nativity, OF Horo. fcope, as they are now usually taken: whereas Heaffirmes, on the Contrary, that the Author understands hereby, whatsoever is Acquired, beside the Natural Inclination of the Child. Et ut melius, faith he, mentem Manilij aperiam, duo Themata hominis pracipua instituit; alterum Geniture, alterum Actionum. So that these Athla are not the Theme, or Figure of the Nativity, or of such things, as are borne with us; but rather, whatsoever wee Acquire afterwards. And here Scaliger takes occasion to let the world know, that Himselfe is the onely Man, that hath releued this Athton, out of the very Jaws of Oblivion; which, he faies, is a word used only by Manilius; and which, though it be very Ancient, yet neither the Fewes, Greeks, nor Arabians had any knowledge of. He confesseth then, that it is very Ancient: Now would I very faine aske this Question of Him: Whether this Word, if it be so Ancient, be either Greeke, Hebrew, or Arabicke? I suppose, hee would be very wary, how he answered this Question, lest he should be forced to contradict Let us see then, if we can discover himlelte. the true Originall of this Word; and briefly set downe, whence this Athlon, whose Etymology harh been for so long time unknown, is derived.

We have formerly sliewed, that the Ancient Hebrewes digested all the Observations which they made, at the Nativity of a Child, into Twelve Places; either on some Instrument, or else in a plaine Figure only. have also said, that these Twelve Places, according to Abarbanel, & R. Facob Kapol were called by one Generall name, min, Micharaloth, that is to say, Ligature : not according to the Usual Acception of the Latine Word Ligatura, which lignifies a little Scrol tyed about the Neck, of Arme; for the cute of some Disease or other. R. Nathan much abuleth himselfe, in taking the word in this Senle, and faying, that they uled to the the Geniture, or Figure of the Nativity, about the Neck of the Child; which Abarbanel proves to bee very False: But they were called התל Machataloth, from the Verbe מהחלות Chatal, which fignifies, to Bind; because that they were taken, and confidered all together, as United; and not severally, and apart. For, if any one of them were omitted, there could no perfect Judgement be given of the Fortune of the Child. Now, from this Chatal, or Machataloth, is Athlon corrupted; which Manilius, describing the Astrology of the Ancients, hath so often made use of, and none but Hee. And thus you see, whence this word, which Scaliger so much rejoyceth over, and will needs perswade us, 'twas unterly Unknown to the Hebrewes, is derived. As for the Greekes, though perhaps they might have it; yet the Vaine-glory wherewith they were pussed up, made them forbeare the use of it; and put them upon inventing of new Termes, for all that they ever had received from the Ancients; by this means depriving Us of the knowledge of Antiquity; the hidden Mysteries whereof we shall more sully discover, in our Cribrum Cabalisticum; and shall there also more sully prosecute this Choyce Point of Learning, touching the Astrology of the Ancients. Let us now descend to the Reading of the Stars.

PART.

PART. IIII.

Of the Reading of the Stars, and what ever else is seene in the Aire.

CHAP. XII.

Whether it be Possible to reade any thing in the Clouds, and in all other Meteors.

THE CONTENTS.

1. How many wayes this Reading by the Meteors may be performed.

2. Battailes, and fearefull Prodigies, seene in the Aire.

3. The Reasons they give, who are of Opinion, that these Prodigies are Supernaturall.

4. Reasons given to the Contrary. Angels, and Saints, how they have sometimes been seen to appeare in the Clouds.

5. A

5. A new, and Quaint Opinion, touching the diverse kinds of Figures that appeare in the Clouds: and a Conjecture upon the Secret, mentioned by Trithemius, of conveying Newes; agreat Distance off.

6. The Authors Resolution, concerning

Strange Sights in the Aire.

7. The Raining of Blood, in the figure of a

Groffe, not Naturall; against Cardan.

8. The Manna in the Wildernesse, marked with the Hebrew letter, Vau, according to some of the Rabbins: and, what Consequence we may hence deduce, against Them.

9. Haile in Languedoc, figured like Arms: Snow, like Stars in shape, spoken of by Kep.

der.

10. The Rainbow, the Hieroglyphicke of Sorrow.

11. Diverse Opinions, concerning the Generation of Comets: and whether they Natuturally presage some Evill to come, or not.

12. Rules to know, what Pillers, Swords, Bucklers, Trumpets, and fiery Arrowes, Seenein the Aire, forestell. Hebrew Letters sametimes

feenein the Aire.

13. What Letters have been devised, in I-mitation of the figures, made by Cranes in their Flight. Presages of Accidents to come, taken from Birds.

Make no Question, but that those, who account Averroes an Atheist; Cardan, a Libertine; and Pomponatius, an Ungodly person; and who, being char-

med with the Doctrines of some Over-scrupulous men, will not be beaten out of the Common Road; will looke very strangely upon this Proposition which I have here made, touching this so Unheard-of Kind of Reading. But leaving them to their own Associationshipment, and taking little notice of what they can say; since They are not the men, to whom we write; let us come, in the last place, to discover the Secrets of this kind of Reading.

1. First, Reading presupposeth some Vissible Signe; whether it be in Letters, Characters, Markes, Ciphers, Staves, Torches, Darts, Javelins, Knots, Streakes, Colours, Holes, Points, Living Creatures, or any other Sensible thing. Now all these Figures, or Signes, may be represented in the Clouds: and the Reading of them may be performed, three manner of wayes. Either by Letters, or Knowne Characters; or by Hieroglyphickes; or lastly, by Signes, or Markes, which doe represent Perfectly, and not Obscurely, that which we read. For, these Signes are different from Hiero-

I make

Hieroglyphickes, in this; that Hieroglyphickes doe represent things Obscurely; as, for Example, expressing a Battail by a Sword: but the other contrarywise, Clearly, and Plainly; as namely, one Battail, by another. Now all these Letters, Markes, and Hieroglyphicks, are represented not only in the Clouds, but sometimes also in all the other Meteors; as Comets, Lightning, Raine, Haile, Snow, Manna, and White Frosts; as we shall see hereafter: We begin with the Clouds.

2. The most Intelligible Signes, Marks, or Characters; that are figured in the Clouds, are Armed Men, Oniets, Armes, and Battels; which appearing in order, for many daies together, do give notice to Men, of some semblable Event to follow. Now whe ther these Prodigies proceed from some Naturall Cause, or else are produced by the power of Almighty God, for to admonish us of our sins; we shall examine hereafter; but this is most certaine, that we never faile of seeing the Event to answer the Sign; and that to the great Astonishment of all those men, who would reduce all things, to the Principles of Philosophy. About twenty foure yeares before the Birth of our Saviour Christ, there were two Armies seen to encounter each other, in the Aire; and that with so great violence,

olence, as that men might heare (if at least the story be true,) the Running of their Horses, vid.T. the Voices of the Men, and the Clashing of becad. 1. their Armour. Not long after, was the truth Plutareb. of this Vision made manifest to the world. in Vit. For Marius and Sylla, by their Factions, on, co making, as it were, a Shambles of the Feilds, suet. were the cause of so much Bloodshed, as that Appiants the Romans never received a greater Blow 44. the Romans never received a greater. Blow, Alex. ab then This. In like manner, when the Alex 1.3. Gothes, Hunnes, and Lombards, invaded Ita-Eneas ly: the Europeans, Palestine; and the Turks, sylv. De-Constantinople; there were seen in the Aire, fer. En-Armes all bloody; Men, raging like Mad; Fincil. and Dogs, to feirce, and cruell; as that the in nov. very Description is full of Horror. But, Evang. that we may not borrow Examples abroad & Beailteit is reported, that in the yeare 156.1. the like an, Prodigies were seen in our owne Country of & Bel-France, and even in the City of Paris also; leforest. which, not long after, suffered under an infi-History nite number of Calamities. Of late yeares ries of, allo, while the King continued his Seige be-Prodifore Montauban, there appeared, at Caen, at the beginning of the Night, very many Dreadfull Sights in the Aire. A City seemed to be beleiged, Ordnance planted, Souldiers drawne forth, and the Clouds moving forward and backward, appeared like to two pitched Battels, that stood ready to charge

cách

each other: and that which caused the greatest Terrour in the Beholders, was, that these Figures seemed to be all bloody, and, as it were, Inslamed; and the Face of the whole Heavens also was most dreadfull to behold.

Now these Hieroglyphicks, and Letters that are seene in the Clouds, are more Frequent then others, though not so Certaine. And, because people doe not much take care to observe them, I doubt not, but if I should here set down, what I my selfe have sometimes seen in the Clouds, I should be laughed at; notwithstanding, the Consideration of These Things ought not to be rejected, by those that are Curious; as we shall shew hereafter. For, besides those wonderfull Essects, which Philosophers have observed doe happen daily in the Clouds, it is also an Admirable thing to see,

Qu' elles se forment En cent diverse portraiots, dont les events les transforment,

En Centaurs, Serpens, Hommes, Oyse aux, Poissons,

Et d'une forme en autre errent en cont fasons.

In English thus.

How into severall Formes themselves they
throw 3

₩hi€h

Which Winds change into Shapes of Things below:

Biras, Fishes, Serpents, Centaures, Men;

Shift, in a Round of Figures various.

3. Let us now proceed to the Confideration of these Prodigies; and discover, whether there be any Sceret meaning in them, or not.

Those menthat are of opinion, that these strange Sights in the Clouds are not Accidentall, and have no Signification in them, endeavour to prove their Assertion by these three Reasons. The First is because their Generation is wholy above the Power of Nature; seeing that no man can assigne any Natural Cause for it. The Second is, because that their Duration is much different, from that which Philosophy alloweth them. For, it we consider the Figure of a Cloud, we shall finde, that it cannot preserve it selfe, in the same Form, and bigness, the space of one hour only; but is presently scattered, and changed into some other shape, very much different from the former. But as for these Prodigious Figures which we speake of, they have been sometimes seen to last, for the space of forty dayes; as the Author of the History of the Maccabees testifieth; who reporteth

 $\mathbf{Z}_{\mathbf{Z}}$

*3. Mac- this wonderfull strange Story, herefollow-Eodem tempore Antiochus secundam profectionem paravit in Azyptum. git autem per universam Ferosolymam civitatem, videri diebus quadraginta, per aëra, Equites discurrentes auratas stolas habentes, & haltis, quali cohortes, armatos, et cur us equorum per ordines d'gestos, et congressiones sieri cominus, et scutorum motus, et Galeatorum multitudinem gladijs districtis, et telorum jactus, et aureorum armorum splendorem, omnisque A like Prodigy happengeneris loricarum. ed to the same City, a little before the utter Destruction of it by Titus, son to the Emperour Velpasian; who was the Instrument of punishing the Inhabitants thereof, for committing the most Horrid Crime, that ever the Sunne beheld. For, there were seen at that time, for above a whole daies space, Armics of men, running up and downe in the Folcab. de Clouds: and Chariots likewife, the very fight 1,7.6.12 whereof aftonished the Beholders. Third Reason, to prove that these Figures are not Accidentall, nor produced by the Power of Nature only, is; because that the Praiers of Godly men have oftentimes been the cause, that there have appeared in the Clouds, the Figures of Angels, and of Saints, whose Assistance hath been implored, in some Calamitous Times : as S. Celestine

was seen at Aquileia; and S. Petronia, at Bologne.

4. But those, who are of a Contrary Opinion, bring Arguments against the former; and maintaine; that there is nothing seen in the Clouds, but what may be Naturall. For, as concerning the manner how these strange Sights are generated, it is every whit as much knowne to us, as that of Comers ; which are often ingendred in various, and severall shapes; as, Pointed, Round, Long, Large, and in the Figure of Haire; according as the Matter is Disposed. manner may the Body of a Cloud be formed by the Wind, which carrieth it to and fro, into ten thousand severall shapes, which appear strange to our sight; though, in themselves, they are cleane otherwise. And thus the First of the afore-said Reasons is overthrowne.

The Second seemes to have much more Force; but in Truth, hath none at all. For, though the History of the Maccabees say, that these Fearful Sights of Armies appeared in the Clouds, for forty daies together; yet it doth not say, that they were Really such; but only, that they Appeared to the Beholders, to be such. Now their Sight might be deceived, by a strong Imagination, caused from having seen it once; as it often hap-

3 pens,

De Itt-

Çant.

pens, in the like case. If it be Objected, that though one Single man might have been deceived; yet, that Many could not possibly: and that therefore, the same thing having been seen by All, it must necessarily be Reall and not Imaginary. To this I answer, that Many may be deceived, as well as One single person; seeing that the Imagination of Many is altogether as strong, as that of a fingle person; and besides, that if the Cloud, wherein these Figures appeare, be Thick, and Mossift; the Raies of our Eyes, being prepossessed by our Imagination, may easily think they see, that which we fancy to our selves. This Answer is set downe more fully by Pomponatius; who, treating of so difficult, and bold a Subject as this; might have cleared himselfe of the Objections made against it, by using another Reason, (which we shall produce hereafter,) which is both easie, and better knowne; without casting himself upon the Maximes of a Philosopher, that scarce any body understands. As for the Long Continuance of these Prodigious Sights in the Aire, it may be answered in a word, that it was Naturall: seeing that the Histories doe intimate, they were not seen continually, and without Intermission: and by Confequence, it might so fall out, that a some time, or other the next day, the Winds might

might possibly dispose the Clouds after the fame manner, as on the day before.

The Third Reason, which is, that the Figures of Angels have been often seen in the Clouds, is not of inflicient Force to prove, that these Effects are Supernaturall. For, oftenumes the Clouds, if they be Thicke, and Smooth, doereceive the Raies, and Species of things here below; which is the Cause that we see them by Resection, as in a Looking-glasse. By reason whereof, Cardan reports, that one day there was the Appearance of an Angel, feen in the Clouds, at Millane ; which caused great Astonishment in the Pcople, till such time as Pelisanus, a Philosopher, made it plainly appeare to them, that this Angel was nothing else but the Restection of an Image of Stone, that was on the top of the Church of S. Godart, which was represented in the Thicke Clouds, as in a Looking-glaffe. And thus might Pomportatius have given a reason of the Apparitions in the Aire afore-mentioned, namely of S. Celestine, at the City of Aquileia, and of S. Petronia, at Bologne; without engaging himselfe in so long, and tedious a Disputa-

5. From this Emission of the Raies, and Species, some have conceived, that all those Figures that are seen in the Aire, are nothing

else, but the Images of things here below. And therefore they say, that those Armies. which have been often seen in the Aire, were the Raies of some Armies, that were in some part of the Earth, or other. And so, that Navy of Ships, that was seene floating in the Clouds by the Romans, when they were preparing to goe against the Genois; and against Perles, the last King of the Macedonians, who was vanquished by Æmilius, was likewise nothing elle, but the Image of their owne Navy, which appeared upon the smooth furface of a Cloud. And according to this Doctrine, peradventure, the Armies of Forreign Kings may be knowne; and News may be conveyed, at a vast distance; there being nothing to hinder it. For, as forthole Objections which are made against the Reading, that Cornelius Agrippa speaks of, which he said might be done, by the help of the Moon, which should receive the Species of the Characters, as a Looking-glasse doth; they can have no place here; for as much as the Clouds are not very farre removed from us; and the Raies of Characters, or any other things, presented before them, cannot be spent, before they can reach so farre, as they must needs do with the Moon, by reason of its too great Distance. And thus perhaps is that Secret of Trithemius discouered; where

he undertakes to send Newes abroad, and make it knowne a great distance off in an Instant, by the help of certaine Spirits, whose names he there sets downe; which are, in my Opinion, nothing else but the Winds; some whereof are more proper for the disposing of of the Clouds, then others are. We may possibly discourse some other time, more fully, of these Secrets of his; which have beene hitherto accounted, either utterly False, or else Diabolicall.

6. It remaines now, that we fatisfie this Doubt here proposed: Namely, whether these Figures that are seen in the Aire, and in the Clouds, be the Images, and Representations of things here below, and confequently purely Naturall, and are of no fignification: Or, whether they are produced, and formed, by the Providence of God, who ceaseth not continually to forewarn us, by some Visible Signe, or other, of what Evils soever are to befall us; as we have formerly faid. which I shall give this Answer, which I conceive to be most True: Namely, that, without all doubt, Many of these Figures are Naturall; and are produced, either Accidentally, in the Clouds, or else by the Emission of the Image, and Species of things here below, as we have already faid: But that there are also some, which we must referre to the wonder-

Chap. 3.

cap. 10.

348

wonderfull workes of God. Of this Later kind are Those, spoken of by the Author of Mach. the History of the Maccabees; where Judas, fighting in Heavens Quarrell, had an Apparition sent him, of five Horsemen, appearing in the Aire; which purfued his Enemies with so great violence, as that above twenty thousand of them fell upon the place. cum vehemens pugna esset, apparuerunt adver-[axi]s de celo viri quinque in Equis, frens aureis decori, ducatum fudais prastantes : ex quibus duo Machabaum medium habentes, armis luis circum/eptum incolumem confervabant: in adversarios autem tela et fulmina jaciebant; ex quo et cacitate confus, et repleti

perturbatione, cadebant.

If it be here objected, that these five Horsmen might possibly have been the Image, and Species of some of the Armie; I answer, that it appeares by the Circumstances, that this could not be fo; it being most evidently true, that these Horsemen did not only seeme to fight; but did Really fight, and charge the Enemie. And if the Lightning here mentioned, had been Naturall, and had beene difcharged from the Clouds; Both Armies should then have felt it alike. But seeing, in that confusion, and mixture of both Armies together, the Darts fell from Heaven upon One of them only, and not upon the other;

we must necessarily conclude, that this was the Hand of God: Besides, that this Prodigy happened also, in a cleare, bright day, when the Aire was darkned with no Cloud. So that, as I am of Opinion, with Cardan, and Pomponatius, that oftentimes we may see in a Cloud, as in a Looking-glasse, the Species of the Statue of an Angel, or of a Saint, placed either on the top of a Church, or elsewhere; or elfe, that our Sight may be deceived, and betrayed by our Imagination: fo do I likewife believe, that thele Visions may tometimes also be Divine; as was that Image of a Croffe, thining most gloriously in the Aire. which was seene by Constantine the Great; who afterwards found the Event to follow. according to the words, that he saw written onit: In hoc signo vinces. The Histories of An. 316.

the Lives of the Saints, are full of the like part. Visions, which cannot be attributed to the Lines.

Power of Nature alone.

7. After the Confideration of the Clouds, wee shall in the next place come to that of Raine: wherein we can make use of no other way of Reading, besides the Second; which is, by Hieroglyphickes. And of this kind, is the Raining of Blood, or, of Water of a Bloody Colour: fuch as was that, which fell in Swit-Lerland, Anno. 1534. which fell upon Peoples Cloaths, in the form of Crosses.

Picus

Picus Mirandula hath Immortalized this Prodigy, by a Large Copy of Verses; among which, you have the story of the Wonder fully delivered, in these few that follow.

Permixtamque Crucem rubro spectavimus olim.

Nec morum discrimen erat; Sacer, atque Prophanus,

Fam conspecta sibi gestabant Mystica: Patres

Conscripti, & pueri; conscriptus sexusuterque;

Et Templa, & Vestes, a summa Casaris, aula.

Ad tenues vicos, ad dura mapalia ruris, Cerncre erat liquidò deductum ex Æthere signum.

Extraordinary Matter in This Raine: for as much as, the Red Drops (faith He) lighting upon Mens Cloaths, might appeare in the forme of a Crosse, by reason of the Waters spreading it selfe all along the threads, which are wrought Crosse-wise. But here he takes no notice, that the Historians, that report this Story, affirm; that these drops of Blood fell in the forme of Crosses, not on Cloaths only, but upon the Stones also, and upon

their Meale: which is an Evident Demonstration, that the Cause of it was not Naturall, but proceeded from some Divine Power. And certainly, the fame kind of Rain, figured like Crofles, which happened in the time of *Julian* the Apostate, what could it betoken, but the Sufferings of the Church, and the Ignominy of the Crosse ? If you but run over the Annals, and consider these severall yeares, 747.783. 959. 1503. 1507. you shall find, that the like Prodigies have been the Fore-runners of such Truths, as have most certainly afterwards come to passe. I shall not here speake of the Raining of Wheat, Wine, Oyle, Hony, Mice, and Frogs; because that their Causes are more Naturall. Neither will I deny, but that These Things are sometimes also true Hieroglyphicks: as it hath been sometime observed in Germany; where the People being, by an Intollerable Dearth, brought almost to Despaire; they were suddenly comforted by a Showre of Wheat, which was icen to fall from the Clouds, presaging the great Plenty of Corne that should follow: which, accordingly came to passe.

8. All the Other Meteors also, though they are Naturally produced, doe yet sometimes serve for Signes; which God makes use of, when he intends to communicate un-

UJ

to us some Secret, worthy of his Greatnesse. Thus the Manna, wherewith the Israelius were fed in the Wildernesse, besides the mamy Wonders, that it was indued withall; had This also added to the rest, (as some of the Rabbins report,) that the graines of it were figured with the Hebrew Character 1 Van, very perfectly expressed: and this was the Principall Reason, (say they) that the ssraelites, wondering at the Novelty of this Character, faid one to another, Man hon? Which is as much as to fay, What meanth this : Vau ? And so going on upon this Ground, they afterwards find out a thoufand Mysteries; raising from hence a strange Kind of Doctrine, which seemeth to be Repugnant to the very Principles of Common Theology. However, we may take Advantage hence, and make tife of these Conceits of Theirs, in confuting the Peevishnes, and Stubbornnesse of this People: and thus far it is Usefull to us. As for Exam-Exed. 6. ple, when they fay, that This Letter, which, in Numbers, fignifics Six, gave them to w derstand; that, during the six daics of the week, they were to gather this Manna: and that this Number Sixe, denoted also unto them, the Misery, and Sorrow wherewith God threatned them, if they murmured any more against him. Now, that this Num-

ber (say they) is the Hieroglyphick of Labour, and Servitude, appeares out of Levi-Levit.25 ticus, and elsewhere; where it alwaies signifies, Labour: as, for Example. They were to work Six daies: and to Till the Ground likewise Six yeares. So an Hebrew Servant was bound to serve his Master Six yeares: and fob was tried by Six Tribulations. But suppose we should reply uponthem, 10h. that all these Mysteries are more fully figured in our Messias, would they conceive themselves bound (think you) to believe us; secing that we take our Foundation out of Their Own Doctrine: Let us suppose then, that the Manna was marked with the Character Vail; according to Themselves, this Character fignifies, the Fruit of Life, and it is the Character also of the Messias, as it is proved by a Learned Venetian. This Eating of Manna then, might also figure out un- cerg. to them, their Earing of the Bread of Life, Vener. in which they One Day should enjoy, as the Mund. Christians Now do. Besides, that it may appear, that the Number of this Character, which is six, doth perfectly agree with all things, that have been spoken of CHRIST; according to Their owne Computation, we have long fince arrived to the Sixth Age of the World, which is the Age, wherein our Saviout CHRIST appeared, and not in

Any Other: so that this Number seemeth chiefly to point at, and to concern Him. Secondly, if we would make knowne to the Samaritans the Wonders of his Love, it is not without some Mystery, that he sate him De Trin. down at Facobs Well, about the Sixt houre. 1.4.c.4. Whereupon S. Augustine saith: Iam incipiunt Mysteria : non enim frustrà hora sexia sedet : quare hora sexta? quia atate seculi fextå. Thirdly, we find in the Gospell, that in the Sixt Moneth the Messias was foreshewed by an Angel, and at the same time conceived also, in the Womb of the Virgin his Mother. Fourthly, Many are of Opinion, that he was borne on the Sixt day of the Week; and that on the same day also he ended his Long, and Tedious Fast. Fist-Iy, that he came Six daies before the Passeover, to Bethany, which is interpreted, The House of Obedience. Lastly, that upon the Sixt day of the Week, and at the Sixt houre of that day, he died for us upon the Crosse. See now, whether the Jewes are not confounded, (at least, should be perswaded out of their Perversnesse,) by their Own Principles. But, to leave these Mysteries, which we shall more fully examine in another place, and shall clearly demonstrate That, which shall be enough to convince the most Obstinate of this Nation; and to return to our 9. Snow? Meteors.

Snow, Haile, and Frost, do also bear sometimes certain strange Characters ; the Reading whereof we are not to neglect. For, there hath Haile been often seen, which hath borne the Figure, either of a Crosse, a Buckler, a Heart, or of a Death's-head: and if we doe not carelesly passe by these Wonders; when we meet with them, we may, no doubt, afterwards find the truth of the Events, foretold by these Hieroglyphicall Figures. It is not many years fince, that, in Languedoc, a Friend of mine, being abroad on hunting, was upon the sudden amazed, at an Extraordinary Noyse of Thunder, and of a most Violent Wind: which made him bethinke himself, how to get to some Shelter. But? as he was got a good way into the Wood, which led to his Dwelling, thinking with himself, that he should not be able to reach his own House, before the Rain fell, which commonly followes such kind of Tempests, he took up his harbour under a Rock funder which he had not staied aboue the space of a Quarter of an houre, but that, thinking the Malice of the Storm had been spent, by a light Showre of Raine that had fallen; he began to go on with his Journey. But he was not gone a Stones cast, but he saw some Haile begin to fall; which made him think of going back again. Notwith standing,

ing, upon better Consideration, he began to think, that this Haile could not be very troublesome to him, seeing it fell in so small a Quantity; and presuming withall, that the Thicknesse of the Trees would be well enough able to secure him from the violence This Confideration had certainly put him upon his Journey again; had he not by Chance, casting his eye upon some of the Hailestones, as they fell, observed, that they appeared to be of another kind of shape, then commonly they used to be. This made him stay, to take better notice of them; so that taking one of the Hailestones up in his hand, he instantly perceived a Fearfull Prodigy in it. For, some of them bare the hgure of a Head-piece; others, of a Scutcheon; and others, of a Sword. This Prodigious Novelty amazed him, and the Apprehension of some Disaster at hand, made him return back to the Rock again: where he was no sooner arrived, but that there fell so great, and so violent a Storm of Haile, as that it killed not only Birds, but very many Bealls also. The like to this, I my self have also fometime observed, in Provence. This man then, returning home, after the Storme was past, could find no more such figures upon the Hailstones, as he had seen at first: which made him conclude, that this Prodigy would

not end with the Death of these Beasts: as he had indeed most Truly Conjectured. For, within a little while after, this Milerable Country had its Fields covered with Souldiers, and its Revolted places belieged, and assaulted, with so much Blood-shed, that the very Memory of it will be alwaies very grievous unto us. The Story of this Figured Haile, confirms that which Corne- in Coflius Gemma hath observed, in these words: mocrit.l. Inventa est sapius Grando, cui futurarum rerum manifeste, ut Mortis, Clypei, aut pugna, aut Crucis insculpta imagines spectarentur. Kupler hath observed, that Snow also is not without It's Wonders: for he affirms, that Himself hath seen some, figured like a Star, having perfectly Six Angles, of an Exact Proportion. Others have also observed some that hath had the Figure of Branches of Trees, or Leaves: and Some, which by its small, Unequall Parts, represented the figure of some Old Ruines of Buildings; but without any Delign, in my opinion; the Generation of It being Naturall, and daily to be seen: as you may see in the said Kepler. And yet perhaps, if These Figures were not too Frequent. They also would be observed to foretell something to come, as well asany of the rest, which are observed to happen but very seldome, which God makes A a 2

nq

to serve for Admonishments to Us; as we shall shew more plainly, when we come to discourse of Comets.

I had almost forgot to set down this following Oblervation, upon the Rainebow, one of the most Noble Meteors, that are formed in the Clouds: namely, that the Figure of it, as R. Kapol faith, represents the letter > Caph, which the Jewes write in this manner, which might peradventure be the Reason, why God placed it in the Heavens, to be a Sorrowfull Memoriall of the Deluge past. For, This Character standeth for 20. which is the Number of Sorrow. Gen. 37. read, that Jacob served in Labans house, Twenty yeares: and Foleph was fold for Twenty Peices of Silver. The Flying Roll, wherein were written the Sinnes of all Men. was Twenty Cubits long: and at Twenty Num. 7. Yeares of Age, the Israelites were reckoned able to serve in the Warres. And Helena, Hiall. in Homer, complaining of her own Misfor-

> Quatuor hic jam lustra moror, quo temport Iratus miseræ mihi verba indigna dedisti.

tunes, takes notice of this number also.

In a word, the Poets, as well as the Prophets, when they would expresse any thing

of Sorrow, made use of no other number. Thus Visses is reported to have endured full Inventy yeares Misfortunes:

Quosque tuli post tot terra, pelagique la-In patriam veni jam nunc labentibus annis Vicenis.

Many Examples, of this Nature, are pro- Numb. duced by Bungus, which I shall here omit, Myster. Num.20 that I may proceed to Fiery Meteors.

11. And among Thele, Comets are the First, which are of use, in the discovery of fuch Secrets, as we now treat of. I am not Ignorant, that many are of opinion, that These Wonderfull Lights, are not Exhalations, drawen up from the Earth; because it is Impossible in Nature, that it should be so : for as much as the whole Earth, converted into Exhalations, would not be fufficient, (fay they) to produce so Vast a Body, as that of a Comet is; if so be it be true, which some have observed; that they are not in the Aire, but But let us Supin the very Heavens. pose them to be, either meere Exhalations, drawen up from the Earth, and Kindled in the Aire, which was the opinion of most of the Ancients; and, among the Modernes, of Picolomeneus, Regiomontanus, Vogelinus, and Libis

Fracastorius: or else, Beames gathered together, or Exhalations, sent forth from the Starres, as Snellius affirmes: Or elfe, Aire De Comet. condensed by the Cold, as Fromundus thinks: or Thicke, and Diaphanous Aire; Shining, and not Burning; as Puteanus: or, a kind mer. t 1. of Celestiall, Waterish, or Oyly substance; Parad. 5. as Kepler indeavours to prove: or, some **9.** 27. of the Grosser Parts of the Galaxia, or Mil-De nov. sid. serp. ky way; as Ticho Brahe maintaines: or lastly, whether these Comets be certaine Fiery stel.1.1. Animals, which sometimes appeare on the Superficies of That Element; as one of the Rabbins will have them to be: however, it R4b. Panisa- is most certaine, that they doe appeare tous in some kinde of Figure, or other; which is Animant. athereis: the businesse of our present Discourse. Now, imerpr. whether the Body of a Comer, or its Figure, Pett 0 doe naturally presage some disaster to fol-Cambalow upon the vanishing of it; the reason of forte. its to doing is not easily given. Yet many are of opinion, that the Body of a Comet being kindled, produceth by its Heat, a very great Drowth upon the Earth; which ordinarily causeth the death of Princes, and great Potentates; who are otherwise much dried up, by their Cares, Watchings, Rich Wine, And this is and high Odoriferous Meats. the reason Fulius Casar died, shortly after the

appearing of the like Comets.

Non

Non aliàs Calo toties cecidère fereno Fulgura, nec diri toties arfère Cometa. saith Virgil.

These Comets therefore may presage the Death of Great Persons; and be not onely De Subi the Signe of it, as Cardan holds, but, the Caufe ul.l.4. See what Ericius Puteanus hath said, De co-They may also cause mer. in this Particular. Barrennesse; and consequently. Famine: for, the Earth being two much dryed; and suffering an Alteration, either by the Exhalations that are drawn out of it, or else by the immoderate Heat of the Aire; and being also corrupted, by the stinking Fumes, issuing from the body of the Comet; cannot give any perfect, and Sufficient Nutriment to the Corne, and other Fruits. Then followeth the Pestilence, and all other Diseases, by reason (saith Kepler) of the Corruption of the Aire; and Earth-quakes also, which are cauled, not by Winds that are generated by the Vapours issuing from the Comet, and getting into Cavernes, and Subterraneous places, as Kepler maintaines: but, by the Vapours that are Naturally ingendred within the bowels of the Earth, by the great Heat caused in it; which, searching for some paslage to get forth at, and finding none, by an extreame Violence causeth this Motion 5 which is for the most part accompanied with iome Aa4

some Diseases, or other; caused by the Noylome Vapours, that alcend out of Thele Cavernes. Besides, the Aire being Heated, together with the Malignity of the Matter of the Comet after it is extinguished, or else, when it beginneth first to ascend, over-heating our blood, is a Means of driving Princes, and Great personages, into strange Furies; whence presently follow Wars, Battels, Herefies, and a world of other fad Accidents. Thus, a little before the Wars of Peloponelus, there appeared a Terrible Comer, for the space of Seventy five daies together. So did another, before the Athenians suffered that great Losse in Sicily: another, before the Lacedemonians were vanquished by the Thebans: another, before Arrius vented his Herefy: another, before the Change of the Romane Empire: another, before the Mischeis that happened, during the time of Classdius the Emperour: and this Comet is reported to have lasted six moneths. Another presaged the Warres of Achaia; and, the Destruction of Corinth, and of Thebes. Another appeared, immediately before the Gothes invading Italy: another, before the Army of Charles the Fift sacked Rome: another foreshewed the breaking forth of the Faction of the Guelphes and Gibelines: another, the Bulgarians breaking in upon Thrace:

and another, the Civill Warres of Cafar & Pompey; of which Lucan writes thus.

Ignota obscura viderunt sidera noctes, Ardentemque polum flammis, Caloque volantes

Obliquas per inane faces, crinemque tremendi

Sideris, et terris minitantem bella Cometem.

Now all these Effects may proceed meerly from some such Causes as These: But if it be fo, that Comets burne not, nor are generated by any Elementary Exhalations here below; but, that they are Above, in the very Heavens; which is the Opinion of the Learnedest Mathematicians; we must then fearch for some other Causes: so that those men then, who affirme, that these New Fires, are Miracles; are not wholy to be neglected: for as much as it is recorded, that in the time of Augustus, there was seen One of these Comets, wherein appeared the Figure of a Whereupon the Divines, being demanded what they thought of it, returned answer; That, This Child should be Greater, and more Powerfull, then Augustus himlelte; and such a one, as should deserve to be Worshipped by Him. But, now whether

whether they be but meere Exhalations; or lastly, suppose them to be New Stars, appearing in the Heavens, we shall in the next place proceed to shew, that their Figures are Mysticall Characters; or, as it were, a kind of Hieroglyphicks, by which we may be able to read, by vertue of Analogy, what Good, or Evill accidents shall befall us. The General Rules whereof do here follow.

12. The First is, that if they are figured like a Columne, or Piller; they denote the Constancy of some Prince, or of some Great Saint, or else of some People, or Nation. And hence, some of the Fewes have taken occation to affirme, that the Pillar of Fire which went along with the Children of Israel in the Wildernesse, was given unto them, as a Hicroglyphicke of Constancy, and Stedfastnesse: and that it was no Ordinary Comet; whatfid.1. 1. ever Andreas Rola affirms to the Contrary; Fig. 783. who maintaines, that it was meerly Naturall, and had nothing Divine in it: it being the Ordinary Course of Nature, (saith He) once in two Thousand years to produce some such Light, as This. Thus, two thousand yeares, or thereabout, after the Creation of the world, This Pillar of Fire appeared: Two Thousand yeares after, which was the Second Age, was That Wonderfull Star seen, that appea-

red to the Wise men, at the Birth of our Saviour Christ: and Two Thousand yeares afterthat, which is the Third Age, and which We Now live in, a New Starre appeared. in the Constellation of Casiopeia. Seneca, Phavorinus, Alpetragius, and Elias Talmudi-7. Qu. sta, seem to favour this Opinion: But it hath Nat cap nothing of Truth in it. For, besides that Ageil. this Pillar of Fire had no Proper Motion at Na. Att. all, as other Comets have; no more then had c.t. Apud Tichon. the Starre, which appeared to the Wife men; Brah. de which had nothing of the Nature of the O- nov. Stel. ther Starres in it, but only the Figure, and P. 783. Light: neither yet did it appeare in the Second Age, (as Rola affirmes,) but in the Third; for, they reckoned then Five Thouland yeares from the Creation:) these New Starres, and Comets have been known to appeare much oftner: and confequently it is. most False, that they are seene but every Two Thousand yeares. Thus, the Learned Lice- De nov. tus hath observed, that within the space of astr. & 30. years, or thereabouts; namely, betwixt Comet. the yeares 1572. & 1604. Three new Stars were seene: One, in Cassiopeia; another, in the Constellation, called Serpentarius; and a Third, in the Necke of the Swan.

The Second Rule is, that when a Comet, or fiery Meteor, is Round, Cleare, Bright, and not Duskie at all, but lookes as it were,

like

like another Sun; it may fignifie the Birth of some Great Prince: as Justin, the Historian writes, that the yeare that Mithridates was borne, during the space of seventy daies, there appeared a Comet; (some say, that it was a Star,) but so Wonderfull a one, as that the Greatnesse of it tooke up the fourth part of the Heavens; and the Light of It, eclipsed That of the Sun. Nam (faithle) et quo genitus est anno, et ex eo quo regnare primum capit, stella Cometes, per utrumque tempus, septuaginta diebus italuxit, ut cœlum omne conflagrari videretur : nam et magnitudine sui, quartam cali partem occupaverat, et fulgore sui, nitorem solis vicerat: et quum oriretur, occumberetá, quatuor spatium horarum consumebat. We have already set downe, what Presages may be made, from the Colour of these Comets. The Third is, that if they be of a Pyra-

midall Figure, we shall then suffer great Losses by Fire; and, by way of Analogy, may conclude, of some Tyranny approaching. And this is the Opinion of Cornelius Gemma, who expresseth himselfe in these words. Fortassis, que in acutam Pyramidem desinunt, Igchiraft. nis pradominia magis, et ex Analogia, in Republica Tyrannidem prasignificant.

The Fourth is, that if they be of much Extent, Waved, and Dissipated here and there

there, in the forme of Waters; they then denote Seditions in the People: feeing that among all the Hieroglyphical Characters, that signific the People, This of Water is the Chiefest; according to that Vision of the Prophet: Aque multe, populi multi. And it hath been very often observed, that after any Inundations, either of the Sea, or of Rivers; the People have presently also made Infurrections.

The Fifth is, that if they be of the figure of a Horne, which is the Hieroglyphicke of Power; as may be observed out of the Scriptures. in very many places: they foreshew the Great strength of some Monarch, and an Absolute Power. Historians report, that when Xerxes invaded Greece, with a Million of Men; there appeared one of this kind of Comets. thining most resplendently.

The Sixt is, that if they beare the figure of a Sword, they prelage Desolations, which shall be caused by the Sword. Such a one was that, that appeared over the City of Hierusalem, for the space of a whole yeare together, and did fore-shew the death of Eleven De bet. Hundred Thousand fewes, as fosephus te-Iud. sliffeth; the greatest part of which number fell by the sword. And in the yeare 1527. a Comet of the like Figure appeared, for many dates together; with this strange Spectacle

attending

attending it, that it was encompassed round about with Launces, Pikes, and Halberts, with such a great number of Heads cut off, as that the Discription of it was full of Horrour. Those that are the least versed in History, cannot but know, how Calamitous a Time this was. If the Comet be sigured like a Trumpet, it then also foretells of Wars: but sfit be of the forme either of a Dart, or Arrow; or else of a Javelin, it denounces hoth Warre, and Pestilence; the Essects whereof slye abroad, as swift as an Arrow. Such a one,

as this, appeared An. 80.

Now, although that in all Comets, these feverall Figures may be produced Naturally; (if so be, that the Matter (which we suppose to be Elementary) be aptly disposed,) whether they be Long, Large, Pointed, Square, Ovall, Triangular, or Round; from whence proceed, Beames of Fire, Bucklers, Capra Saltantes, which are so called, not, for having the figure of a Goate; but, either because this Comet hath something of the Resemblance Olymof a Goat's Beard, as Philoponus, piodorus affirme; or else, becau at the y dematter of it being dispersed, takes fill grees, one part after another, seems hercin iffly, to imitate the skipping of Goates; yhich for the Reason that is given by Seneca king I professe I understand not,) where, if

of these Comets, he saies: Aristoteles quoddam genus illorum, Capram, vocat; quast 1gnis globum: although, I say, these Figures may be Naturall; yet do they notwithstanding foretell, (whether it be, by the Power of Resemblance, which we have spoken of formerly; or by some other way, which is Unknown to us;) all those Events, which we have now delivered; and that, most Certainly too, as Experience it selfe testisieth.

There have been oftentimes seene of these Meteors in the Aire, which have represented the sigure of some of the Hebrew Letters; and that in a reasonable perfect manner expressed too: as, for example, that, which they call, Ara Cæli, represents the Letter w Schin; the Chasma, represents the letter Mem; or else, the letter D Samech: and so, of many others. Wherein notwithstanding I can discover no Secrets to lye hid; at least, that do satisfie me tall. In our Cribram Cabalisticum, we examine all these Mysteries; and discourse at ge, of all that ever the Cabalists have writed

here I thought to have ended er, but that I now remember, that to treat of all forts of Reading, halfing a performed in the Aire. Now, of Naturall, of all these kinds, is that value and be taken, from the Flying

of

370

Ep. 4. ad of Cranes: of which S. Ferome faith: Grues. unam sequuntur, ordine literato. These then change their Order, and shift their Rankes, at the Instant that the Windturnes; that so, by meanes of a different Figure, they may be able to fly, with the greater Ease, and Swift-Thus, when the Wind blows behind them, one, or two of them, by turnes, place themselves behind the rest; so that they are, as it were, a kind of shelter to the maine body of the Flight, which is divided into two Branches. But if the wind chance to blow against them, they then presently change their whole Order: For, whereas before, the Fore-part of their Body was divided into two Rankes, they now divide the Hinder part into two Rankes, representing the Figure of a V, one of them only, flying in the head of the Company, and dividing the Aire before them; and all the rest, slying smoothy after it, as if they were joyned together in a Line, make way for the Wind in such fort, as that meeting with no Resistance, they flye with all possible ease, and pleasure. Sometimes, they make a perfect Triangle; or a Semi-circle, like to a C; or else, a perfect Round O; as, when they are set upon by an Eagle; by this means defending themselves from his assaults. For, on which side soever the Eagle comes, he encounters with nothing but Bills: just as a Bo-

dy of Horse, setting upon a Party of Foote, meets with nothing but Points of Pikes. And hence we may conclude, that *Lucan* is much mistaken, when he saies, that all the Figures, which these Birds imitate in Flying, are meerly Accidentall, and Made by Chance.

Strymona sic gelidum, bruma pellente, relinquunt,
Potura te, Nile, grues: primoque volatu
Effingunt varias, casu monstrante, siguras.
Mox, ubi percussit tensas Notus altior alas,
Confusos temcre immixta glomeranturin Orbes,
Et turbata perit dispersis littera pennis.

Flight make

(As Chance directs,) of Letters various
formes.

When their spread Wings are by the Violent

stormes

Of strong South-winds assailed, by and by
in a confused globe all mingled flie:

The Letter's lost in their disranked wings.

By

For,

For, besides that in Battell, they never ob. ferve any other Order, or manner of Marshal-3. de A- ling themselves; a man may observe also in their Flight, that when either the Wind ceachiliad. Teth, or another begins to blow; they pre-2. de nat. sently break their Ranks, and cast themselves into another Figure. These Truths are De folert. largely discoursed of, by Alian, TZetZes, Ciet in vit. cero, and Plutarch: and Particularly by Aldrovandus, who reports, from diverse of the Thesei. Omitho-Ancients; that, from this Diversity of Figure in the Flying of these Birds, Palamedes, in the time of the Trojan War, took occasion to invent diverse Letters of the Alphabet; which he added to those other, that the In Xenijs Phanicians had before. Whence Martial faies:

> Turbabis Versus, & litera tota volabit, Unam perdideris si Palamedis avem.

And certainly we often see, that Cranes, in flying, do strangely imitate these Greek Lettib. 8. ters, y, x. Cassiodorus goes further yet, and assurant assures us, that not only some Letters, but generally All of them, were invented by Mercury, in Imitation of the severall Figures he observed, in the Flying of these Birds. His words are so Considerable, as that I think sit to inscretchem here. Ut aliquid cer-

tum, & exquisitum dicere videamur, has (Literas) primum, ut frequentior tradit Opinio, Mercurius, repertor Artium multarum, volatus Strymoniarium avium collegisse memoratur. Nam hodie Grues, qui classem consociant, Alphabeti formas, Natura imbuente, describunt; quas in ordinem decorum redigens, vocalibus, consonantibus, convenienter admissis, viam sensualem reperit, per quam alte petens, ad penetralia Prudentia Mens possit alta pervenire. They say, that Wild-Geese also observe the same Method, that Cranes do.

Now the Letters, which all these severall Birds make in their Flying, shew us only the Diversity of the winds; or else, the manner of their ordering themselves in Battell; and no more. But their Fighting, Singing, and manner of Feeding, and going to Rest, are of more Signification then lo: for these are often Signes of things to come. Thus weusually see, a Sick person is near his End when a Raven is observed to come croaking, and to light upon, or fly neer the Chamber where he lies: the like whereof is observed also of Scritch-Owles, and Horn-Owles; Birds, which by reason of their delighting in Darkness only, and Shady places, are accounted Unfortunate, and Ominous. The Fighting, and Gathering together of all other forts of Birds, especially Bb z

tums

Birds of Prey, and which feed upon Flesh, doth likewise often foreshew some sad Accident approaching. Thus Dion reports, that when the Armies of the Triumvirate Lib. 50. marched forth against the Complices of Pompey, to take a just Revenge of Cafar's bloud, there were feen, hovering over the Troops of Brutus, and Calsius only, great numbers of Ravens, and Vultures; which by their Many, and Fearfull Cries, did foreshew the Ruine of These Two Murtherers. Neither need we travell so far, for Examples of this Nature: for, we have a like Story to this, delivered by Aneas Sylvius; who, comming to be Pope, was afterwards In Europ. called by the name of, Pius II. and it is this. In that Part of Gallia, (faith he,) which is turnamed Belgica, not far from the City of Leige, a Falcon, as the was fitting upon her Eggs in her Nest, a company of Ravens, perceiving her, fet upon her; and, not content with beating her, devoured her Egges allo; and that, with such Strange, and Unufuall Out-cries, as that the Boors, and Shepherds thereabout, who had observed this Strange Piece of Tyranny, acted upon the Faulcon, were very much amazed at it. But at length, the Faulcon, though with much adoe, being gotten from them, the Shepherds thought the Quarrell to be now certainly o-

ver, and that they should heare no more of these Out-cries. But, which much increased their Wonder, on the Morrow, they saw gathered together, in the very same place, so infinite a number of Faulcons, and Ravens, as that they could not have believed before that there were so many in the whole world: all which were now gathered together to decide this Difference, betwixt the Faulcon and the Ravens; the Place, and Combat being, as it were, agreed on, on both fides. The Faulcons pitched their Battell toward the South side of the Place; and the Ravens toward the North: and both the One, and the Other, observed their Ranks, and Order as exactly, and beheld each other with as herce Countenances, as if they had been Armies of Men. At length, after they had been observed to keep this Order, for some little time, (some of them being, as it were, in the Main Body of the Army; and others, in the Wings,) the Fight began, with such Fury; as that, in an Instant, the place all about was covered with Feathers, and Bloud, and with dead bodies of both Parties. But in Conclusion, the Faulcons wonne the Day: and it seemed but Reasonable; that They, who fought in so just a Cause, should bear away the Victory. Now that this Battell, fought betwixt these Birds, did presage some

Battell to be fought by Men in the same place, Edovardus Scleikel endeavoureth to prove, by the Event: who writing the History of the year 1391, tells us; that not long after this happened, two Bishops, pretending Right each of them to the Bishoprick of Leige, were to incented against each other, as that filling all the parts round about with Souldiers, they made a Sad, and Bloudy Decision of the Controversie. For, Benedict XII. and Gregory XIII. (whose Factions had likewise made a Division in the Church, about the Popedome,) maintaining each of them the Bishop of his own Election, drave on the businesse to so great a Height, as that it was to be determined only by the Sword. The Liegeois favoured the one Party; and Fohn Duke of Burgundy, the other. But in the end, the Duke being stronger then his Enemies, gave them Battell in the very same place, where these Birds had fought before, and wonne the Day, with the loffe of three Thousand of the Liegeois. The like also happened An. 1484. when Lewis, D. of Orleans fought against Charles VIII. And that I may not trouble my self any further, in collecting Instances of this kind, you may have recourse to the fore-named Scleikel, and Belle-forest, who will furnish you with good

store of the like Presages: it not being my

Purpose to give you a Catalogue of them, but only to examine their Caule.

We say then, that Birds may Naturally foreshew sad Accidents approaching; if we except all fuch, as depend upon the Will of Man; as, to give Battell, or, Not to give Battell: for, in this case, all Presages And if by Chance the forementioned Battels were observed to be fought, after those of the Birds; yet the Birds cannot be thought to have fore-shewed them: fince it is by meer Accident, that the Birds fought in the Aire, either before, or at the same time, that men fought upon the Earth: or elle, perhaps, God may sometimes make ule of these Extraordinary Signes, to piepare us, (as we have faid before,) againgt the Evils that we are to encounter with.

To keep our selves therefore within the Compalle of Naturall Causes; we affirm, that we may foresee Fair weather, Raine, Thunder, Pestilence, the Overwhelming of Cities, and Hills, and also the Naturall Death of Men, by the Naturall Disposition of Birds; and that, three manner of Waies. The First is, by their Flight: the Second, by their Singing; or Crying: and the Third, by their Leaving, and Forsaking a Place, Later of these doth manifestly forestell the Falling of Mountains, and of Ciries, and

Bb 4 Houses

Hift. Prod.

4

called

Houses, the Pestilence, and Famine approaching: And the Two Other fore-shew the Change of Weather, and the Naturall Death of Men. And here I cannot but wonder, that among all those Historians, that have written of the Presages of Birds; there is scarcely any of them that have endeavoured to give the Natural Causes of them. They will tell you perhaps, that against Raine, some certain Birds will fly close to the side of Rivers; but they do not tell, what should be the Cause of their Flying thither, rather then to any other place. But, seeing that all these Actions are not done, without some Reason, or other; we shall here indeavour, in a few words, to discover what it may be.

It is certain then, that Birds which keep alwaies in the Air, have a more perfect Sense, and Apprehension of the present Temper of It, then We can have: and this is the reason, why against all Changes of the Air, and of the Weather, they are wont to give us some Signe of it: as, for example, to Sing, and Chirp very pleasantly, when the Aire is Clear, and Calm; and on the other side, to change their Note, when it begins to be troubled and overcast; and to sly to Rivers sides, when it is like to Rain; especilly those that delight in eating of Worms;

which abounding most about River's banks, by reason of the Corruption, and Humidity, alwaies come abroad out of the Earth, against Wet weather. And this is the Reason, why Crowes fly to Rivers sides, when it is like to Rain. Secondly, if the Aire begin to be infected with any Contagion; they, finding themselves annoyed thereby, presently get them gone, and quit the Country; although it be so Far, and plentifull a one, as that it affords them more store of Food, then any other place can. Thirdly, they use to fly away, and forfake a City, or Hill, which is neer falling to Ruine, and to be Overwhelmed; by reason that the Hill, or City, not falling to the ground fuddenly, as it seems to Us to do; but, by little and little; there are caused by this meanes certain Rifts, and Openings in the Earth, out of which ascends so Contagious an Aire, as that the Birds, (which are far quicker Sented then We are,) perceiving it, preiently leave the place, and fly away. Thus did those Birds, which we have formerly mentioned, out of Rab. Elcha, fly all of them away, even as much as the very Poultry, when the City, wherein they were, was now ready to be overwhelmed by the Ruine of Two Mountains. We have also said before, that in a certain Village, in SuitZerland,

380

ealled PLOURS, the very Bees did the The Instance of a Man neer death. doth also confirm this Truth: for, when he is at his last Gasp, the Pores being opened, by a Certain Violent Labouring of Nature, send forth so Corrupt an Aire, or Sweat; that the very Fleas, not enduring it, leave the place. The fame is also report. ed of Rats, and Mice; who will be fure to forfake a house, that is ready to fall. And certainly no man can doubt, but that the Air which is pent up in the Close holes, either of a Mountain, or of the Foundation of a Ciry, or of the Walls of a House, must needs be very Corrupt, and Putrified Air, which, when it commeth to be exhaled, De Vari-must necessarily be very dangerous, to all #1.3.6.3 those that shall take it in. And in this sense we are to understand Cardan, when he saies; that a City is neer its Ruine, when the Ravens are observed to croak, more then usually: foralmuch as, thele Birds having a Sent of the Putrid Air, that issueth out of the Earth, think it to be Carrion; after which they are so greedy, faith Elian, as that getting to the tops of Trees, or else flying about in the Air, they turn themselves about toward every blast of Wind, that so having a Sent of any, they may goe, and feast themselves upon it. And for the same realon,

son, if they chance to flie over a house, where any are Sick, and that they alight upon it. and cry more then they use to doe; they have some Sense, by reason of the Air that commeth out of the Sick persons. Chamber of his approaching Death. The Augury therefore, or Divination by Birds, used by the Ancients, was not altogether so Ridiculous a thing, and fit to be accounted only as a Piece of Superstitious Foolery; as Delrio Disquis. would make it to be. And here I cannot Mag. 1.4. choose but laugh at those men, that will needs 6.2.9.7. have Apollonius Tyaneus to be a Sorceror, and a Magician; because he was able to interpret the Language of Birds: as if we might not see the Experience of this every day, and perceive, that 2 Hen useth alwaies one Certain Tone, when She calleth her Young ones about her, and a quite different one, when she hath laid an Egge; and makes a Third Kind of Noise, Unlike either of the Former, when the is any way frighted. So that, when I hear a Hen make a Noise, I may fay, that either she hath found some Corn, and now the calleth for her Young ones; or else, that now she hath laid an Egge; or else, that she is frighted. And what should hinder, but that by long Experience, a man might be able to do the like, by all other Birds: As for the other Presages, that

may be taken from them, and which are more Lib.1. de Common; I must refer the Reader to Cicero, Divin. Virgil, Alchindus, Firminus, Hieronymus Georg. Tortus, Federicus Bonaventura, Augustinus De Temp. Niphus, Aliacensis, Minerva, Gul. Gratamus. Repert. de rolus, and Antonius Mizaldus.

That the Starres, according to the Opinion of the Hebrew Writers, are ranged in the Heavens, in the forme of Letters: and that it is Possible to reade there, whatsoever of Importance is to happen, throughout the Universe.

THE CONTENTS.

by the Greeks, permitted by the Church, though Dangerous. This New Doctrine, of the Reading of the Stars, no whit repugnant to the Christian Faith.

2. This Reading, proved out of the Scripture. Diverse passages of Scripture, tending to this purpose, interpreted.

3. The Opinions of the Ancient Hebrews, Greekes, and Latines, in this Particular.

4. The reason, why so few Authors, of these Later times, have medled herein. What our Modern Writers, as Reuchlin, Picus Miranduli, Agrippa, Kunrath, Banelli, and Flud, have delivered of this Subject.

5. Postell's Intention of bringing it into

Europe.

6. The Stars ranged, not in the forme of Anbicke, nor Samaritane, but of Hebrew Chanatiers. The Superstition of the Arabians, in
nading some kind of words. Their Letters;
borrowed from the Hebrews.

7. The Hieroglyphicall Living Creatures of the Ægyptians, placed in the Heavens, are not to serve for Letters. The Constellations

Imperfect.

8. What things are to observed, that one may be able to reade the Heavens. What the nason is, that New Stars often appeare; according to the Rabbins.

9. A Continued Enumeration of the severall Meanes that must be used, for the rendering a Man Capable of this Reading. The Star in the Taile of Ursa Major, the fore-shewer of the Change of Empires; and how.

10. On which side we are to begin this Reading of the Heavens, and how we must Inter-

pret the words we find there.

11. Of those Celestiall Letters, that have foreshown all the Great Mutations in States. The

Fall

Fall of two Potent Kingdomes in the East, read. in the Heavens by R. Chomer.

12. The Authors Judgement, concerning this Reading of the Heavens.

384

Hole, who have diligently examined the Choycest pans of the Learning of the Ancients, have observed, that there is nothing that is more Absurd, in Appearance, then

the Figures of the Celestial Constellations. For, what a Confused thing is it, (fay They) that, in those places, which are destined to be the place of abode for the Blessed Spirits only, there should be lodged such numbers of Beafts; and, some of them so dreadfull, as that we cannot thinke of them, but with Horrour: If they had placed only Men there, and had allotted a Caftor, and a Pollux, Dominion there; this might have been interpreted an Error of Love; which fuffers us not to be content, in wishing small Honours to those we Love. This Consideration might also have satisfied those, who complained, that the Celestiall Figures were nothing elle, but the Representations of the severall Scapes of *Fupiter*; & that the whole **F**ace of the Heavens was filled, with the Notes of his Ince-Ruous Prankes: so that if any one should undertaké

dertake to excuse these Amorous Signes, he would be the lesse blame-worthy, in that hee did it, only in Defence of the most sweet, and Powerfull of all our Paffions. The Excuse of those, who imposed upon these Incorruptible Bodies, the Figures of Brute Beafts that are most subject to Corruption, and even of Things Inanimate also, was most just; seeing that, in so doing, they had no other Designe, but what was Religious. Thus we see Fishes there, Censers, and Eares of Corn in a Virgins hand: And, those who are skilled in the Secrets of the Ancient Theology, know well enough, that it was not without some Mysticall reason, that they placed one Crowne in the South part of Heaven, confisting of Thirteen Bright Stars; and another in the Northern part, containing eight stars in it. But to place Dragons there, and Serpents, and Hydra's, Reason can never endure. And yet, see the Strangenesse of the thing! For Though the Ancienes had thus filled the Heavens with Brute Beasts; and that, according to this their Doctrine, one would have imagined this Celestiall Paradise to have been, an Habitation of Monsters, and a Dreadfull Wilderness, rather then the Seat of the Blessed, & a Place abounding with all manner of Pleafures; yet notwithstanding neither hath the Church ever reproved it, nor any of the Ancient

Unheard-of Curioli

cient Fathers disavowed it. Now the Subject we treat of, is much leffe Scandalous; and, by Consequence, more Tolerable. For, what danger can there be, in affirming; that the diverse Figures of the Starres represent, and make up the different Characters of the Hebrew Alphabet: And, that as These Letters have some Signification; when they are Single, as well as when they are joyned with others: in like manner the Stars, either alone, or joyned with other Stars, doc note unto us some Mysteries? Yea rather, this Doctrine of ours is so farre from being such, as men should beware of, and, hold it Suspected; as that, on the Contrary, it teacheth the Manifold Wonders of God; and proveth, that all these Stars have not their Order bestowed on them in vaine; and that their Motions, and different Aspects are not utterly uselesse, and without any Defigne. Insomuch that, in my Opinion, it would be no lesse then Blasphemy in any man, to affirme the Contrary; or to fay, that they are placed there, only for Ornament, and to beautifie the Heavens, and to give Light; and for no other cause at all. But, what Madnesse is it to confine these Wonderful Lights to One only Operation; seeing that, besides that Experience teacheth us, that the Moone is the Governesse of all Humours; the Sun, the Principle of Life; Saturne,

Saturn, a Malignant Star , Jupiter, a Benign ; the Signe of Taurus, cold and dry, that of Gemini, Hot and moist, Aries, Hot and dry; and so of the rest: we do also see daily; that one and the same Simple here below, serveth to diverse and fundry Operations: and therefore, if the Properties of Hearbs, are not refrained to the narrow limits of One Sole Elfect, why should we thinke so unworthily of the Stars, as not to believe the same of them? Wee conclude therefore, that besides those Wonderfull Qualities, which wee acknow+ ledge to be in them; they may also represent; by their Diversity of Aspects, certaine Figures, or Characters, by which we may have some Apprehension of the Greatest Changes, that happen here below. And this Truth we will now endeavour to prove; out of the Holy Scriptures.

2. If then we can any where find, in these Holy Scriptures, that the Heavens have been called by the Holy Ghost, A BOOK; then doubtlesse we may conclude, that there are, in this Booke, Letters, and Characters, which may be Understood by some or other. Now, that it is called a BOOKE, appeares out of the Prophet Isaiah, who speaking of the Last Day, wherein all things shall Cease, is the saith, Complicabuntur, sicut Liber, Cali; where the a Caph, in Hebrew, which the Last Day

ς ₍'

tine translateth, Sicut, signifieth, in the Originall, Quia. So that, as Isaiah hath said, that the Heavens shall be rolled together; so hath he, at the same time, given the Reason of it also; Because they are a Booke. If it be Objected, that I may fignifie, Sicut as well; I answer, that those, that are but meanely versed in the Holy Scriptures, know well, that this Latine word, is not alwayes a Note of Similitude, Fa-Eti sumus Sicut Consolati: (was the song of the People, returning out of Captivity:) as Men that are Comforted; shall we conclude hence, that they were not Really so: No: But this word Sicut, AS, is Redundant in this place, and might as well have been away. So likewise in this passage, Transivimus Sicut per Ignem: and in many more the like. Therefore Complicabuntur Cæli, Quia LIBER sunt. But if it be still Objected, that for as much as > Caph, lignifies sometimes sicut, in the Originall; there is no more reason, why it should be rendered Quia, then Sicut: and Consequently it will still hold true; that the Heavens are not a Booke, but are onely as a To this it may be answered, that the Holy Scripture doth else-where fully decide this Controversie; seeing that, speaking of the Heavens, it makes mention of Lines, and Letters, which are words, that are most properly, and Essentially spoken

of a Booke; and maketh no use of the word Sicut, As, at all: which is an Infallible Argument, that these words, in the passage before cited, Complicabuntur, SICUT Liber, Cali, are not expressions of Similitude. Now that the Scripture, speaking of the Heavens, nameth expresly the word LETTER, will appeare out of the very First Verse of the Bible; where the Hebrew Text runnes thus. בראשית ברא אלהים את השמים Bereshith bara Elohim ET haschamaim : that is to say: In the Beginning God created the LETTER, Or CHARACTER of the Heavens. For, this is the meaning of the Hebrew word nn, ET; or nn Aot, which fignifieth a LETTER. And as for the word, LINE, wee finde it much more plainely set downe in the 19. Psalme, Vers. 4. In Omnem terram exivit on Kavam, LINEA corum.

Ishali not here enter into any tedious Dispute, Whether it be to be read proposed Kolam,
Sonus eorum, rather then proposed Kavam, Linea eorum: and so consequently, whether
the Passage cited by St. Paul, out of the Interpretation of the Seventy, be corrupted:
or essentiation of the Seventy, be corrupted:
manus, the Hebrew Text. In my Advis
sur less langues Orientales, I show, with Titelmanus, Bredembachius, Malvenda, Mercerus, co-

C c 2 Genebrard,

790

Genebrard, that the Places are not at all Corrupted, neither in the one, nor in the other: but that the Septuagint, and St. Paul had regard to the Sense of the Words, rather then to the Letter; laying, Sonus eorum, to make it fuite more aptly with the following Words: Et in fines Orbis terra verba eorum: because that, the Sound, the Voyce, and the Words, doe very handsomely accord, and suite together. We may adde also, that they made use of a Sublime, and Allegoricall fense of these words, applying them to the Preaching of the Apostles. And thus St. Paul, and the Septuagint, being fully reconciled to the Hebrew Text; we may the more boldly sticke to the Letter, and read Kavam, Linea eorum; understanding it spoken of the Starres, which are ranged in the Heavens, after the manner of Letters in a Booke, or upon a Sheet of Parchment. For which reason also, God is said, in the Holy Scriptures, to have stretched out the Heavens, as a Skinne: calling this Extension, רקיע Rachia; from whence perhaps the Greekes might take their word pand, which fignifieth a Skinne, or Hide; it being most proper to a Skin, to be Extended, or Stretched forth. Now upon this Extension, as upon a Skinne, hath God disposed, and ranged the Starres, in the manner of Characters; whereby

whereby, as by a Sacred Book, the wonderfull Workes of God are set forth, to all those that know how to read them. Cæli enarrant gloriam Dei; saith the Psalmist. And here peradventure some may say, that the Wonderfull Workes of God are let forth by the Heavens, in their Prodigious Extent. Harmony, Brightnesse, Order, and admirable Motion; and not by way of any Writing. But R, Moles, a very learned Jew. assureth us, that the Word one Saphar, to Declare, or Set forth, is never attributed to Things Inanimate: so that from hence He concludes, that the Heavens are not without fome Soule; which is no other, then that of those Blessed Intelligences, who have the Conduct of the Starres, and dispose them into fuch Letters as God hath ordained; declaring unto us Men, by meanes of This Writing, what Events we are to expect. And for this cause, this same Writing is called by all the Ancients, כתב המרכים Chetab hamelachim, that is to say, The Writing of the Angels. And that this passage, Calienarrant gloriam Dei, is clearly meant of this Celeftiall Writing, appeares by the words immediately following; In omnem terram exivit Linea eorum. I know very well, that according to St. Paul, and the Septuagint, a man may understand, by the Heavens, the Apo-

Galg. Haff. in

Berd.

fles; or, as some others will have it, the Prophets. But, if pursuing the Allegory, a man should take occasion to denythe Literall Sense; this would be no small Crime, in in the Judgement of the Fathers. Scriptura Verba, faics the Whole Schoole, propriè accipienda sunt, quando nihil inde Absurdi fequitur. So that if we sticke to the Letter of the Text, not onely this Passage alleaged, but many others also, which I omit, that I may come to the Maine Matter in hand, doe very much confirme this Writing.

3. Now, as the *Prophets* have done before, so have all the Learned among the Ancients also, after their Example, called the Heavens, SACRED BOOKES: as, among the Jewes, R. Simeon Ben-Fochay, in the Zohar, on the Section Temourah; which is the 25. Chapter of Exodus, Cifr. 305. where he speakes very largely of this Lib. Mo- Celestiall Writing, though very Obscurely. Kab. Be. R. Abraham also, in his fetsira, or Booke of ref. The-the Creation, delivers many Mysteries of it; and after them, R. Moles Ægyptius, Moles Missiah. Ben-Nachman; Abraham, the Sonne of Dr In Miss. or, his Contemporary; Aben-Esra, David mot Ado- Chimchi, fom Tof Ben-Abraham, fofepb the Some of Meir, Levi Ben-Gerfon, Choma, Abarbanel, and many others, which I shill here omit, that I may come to the Greekes,

and Latines, who will peradventure be better received.

The Learned Origen, interpreting, after his manner, that is to fay, Subtilly, and Quaintly, this Passage in Genesis, Et erunt in Signa; affirmes, (as he is reported by Eufebius,) Evang. that the Starres were placed in this Order in 46.6.9? the Heavens, for no other end, but to thew, by their diverse Aspects, Conjunctions, and Figures, what ever is to happen, while the World indures, as well in Generall, as in Particular: yet not fo, as if they were the Cause of all these things; never any such thing came into the Thought, much lesse into the Writings, of this Learned man. For, as the Prophecies, that are written in Bookes, are not the Caule of those Events, which they foretell shall happen; but onely, the Signe: in like manner, faith he, may the Heavens very justly be called a Booke, wherein God hath written, all that is, hath been, and hereafter shall be. And, for confirmation of this, he citeth a passage out of a Booke, the Title whereof is, Narratio Foleph, a Book in his time highly efteemed by all men: wherein the Patriarch Facob, giving his Blefling to all his Children, tels them, that he had read in the Tables of Heaven, all that ever was to Belall Them, and their Posterity. Legi, taith He, in tabulis Cali, quacunque contingent Cc4

C. 2.

Vobis, et filijs vestris. Whence the same Origen concludes, as well in his Tract on this Question, Vtrum stella aliquid agant? asin his Booke, De Fato, Cap. 6. that some My. steries may assuredly be read in the Heavens; by reason, that the Starres are disposed, and ordered there, in the forme of Chiracters. The Conclusion of this Learned Father is so much the stronger, in that, where the Vulgar Translation reades, Sint in Signa, the Originall Hebrew is, חריו לאחת vehaion leototh, that is to fay, word for word, Et sint in Literas. This Doctrine is of so great de Fato, Importance, as that Julius Sirenus hath undertaken the Defence of it; and maintaines, that it is a most True, and Safe Opinion; and fuch as hath been Entertained by most Religious Men. Neque in illis corporibns Lib.z. Cælestibus (saith St. Augustine) hic latere contra posse cogitationes credendum est, quemadmodum Manich. in his corporibus latent; sed, sicut nonnulli motus animorum apparent in vultu, et maxime in oculis ; sic in illa perspicuitate ac simplicitate cælestium corporum, omnes omnino motus animi latere non arbitror. I am not Ig-In Gen.1. norant, that Pererius endeavours to finde out firon. c.4. another Sense, in these words of St. Augustine: but it is an easie matter to say, what one pleaseth, in interpreting the words of a manthat is Dead. Now this Calestiall Reading

ding may the more easily be beleived to have been the Reall Meaning of This Learned Father, seeing that many others of the Fathers have strongly confirmed it: as, St. Ambrose, and Prosper; who call the Heavens, Ep.8.adi. by the Epithets of PAGES; and, Devera WONDERFULL INSTRU-Religion CTIONS: Albertus Magnus stiles De Mithem, an UNIVERSAL BOOK. rab. And John Damascene goes yet farther, and De Fid. faics that they are CLEARE MIR-116.3.c.s. ROURS; intimating, that we may fee, distinctly There, even as farre as to the most Secret, and Weightiest Motions of our Soul: which gave occasion to St. Augustine to utterthole words, which we have before cited. All the Platonists in a marther, were likewise of the same Perswasion: and this is the reason that Porphyrie assures us, that when he had resolved to have killed himselfe, Plotinus, having read his Intention in the Starres hindered him from doing it. Orpheus also had knowledge of these Secrets, as appeares by these Verses of his:

Il we de asposs Τάξις αναλλάκπιση έςημοσυμαίσι τρέχεσα.

Certus tuus Ordo, Immutabilibus mandatis, currit in Astris.

4. As

4. As for our Modern Writers, it would even amaze a man to confider, that among our Libraries are stuffed, there is hardly Five. or Six to be found, that have taken any No. tice at all, of this Curious Piece of Anti- nix of the Age he lived in, took some pains quity, concerning this Celestial Writing. I know very well, that Ignorance will be pre-Cently ready with this Answer, that the Va- illrum in Calo sint descripta, & significata nitie of the Subject, is the reason of this But why then have such an infinite number of other Fooleries ben taken into Confideration, and thought a fit Subject for their Learned Pens, which are a thousand times more Ridiculous in Appearance, then This is : whereas, on the Contrary, there is no Astrologer, to whom this Science is not Necessary; nor any Search er into the Choiser Pieces of Theological Antiquity, to whom in like manner it may not be usefull; if at least it be True. I am therefore apt to believe, that the true reason is, the Neglect rather of the Orientall Languages; whereon these Curioitties do so necessarily depend; as that, without the knowledge of them, they cannot possibly be explained, or understood : insomuch that, we had no notice at all of thele Mysteries, till such time as they were brought into Europe by those men, that addicted them;

solves to the study of the Eastern Languages. Capnio was the First, that, in an Age De Ant. such infinite numbers of Books, wherewith when Barbarisme reigned, adventured to Cab. make fome of these Choise Discoveries. picus Mirandula likewise, who was the Phæin searching into these Secrets; and also proposed the Question in hand, in these terms: omnia, cuilibet scienti legere? Cornelius Agrippa also hath delivered His opinion herein. Pierius Valerianus, in his Hieroglyphicks, ocult. hath these words. Illa Extensio in modum Philos. pellis, tanquam literis, inscriptæ laminaribus, Lib.44 ostellis, dicitur Rakia, &c. Blaise de Vi- fol. 3662. genere: in his Book Des Chifres; makes a long Discourse on this Particular. Banelli, an ltakan, hath faid more to this purpose, then all the others, upon those Words of S. Luke: Gandete, quòd nomina vestra scripta sint in Calis. Kunrath, according to his usuall man-In Am ner of Fooling, makes a Riddle of it; phith.

In quo sunt pueri quotquot in Orbe Viri.

It feems, that these kind of Authors write to no other end, but that they may not be understood: by this means seeming to make war against Nature; which hath given us a Tongue, and the use of Speech, that we

might be able to expresse our Conceptions? whereas these men, on the contrary, Endeavour to be Obscure, and Dark. Robert Flud. in his Apology for the Brethren of the Roly Croffe, hath gone on very far with this Celestiall Writing; the Characters whereof he affirmes to be made, in the same manner that Others are. In Calo, (faith He) inferti & Apologet. impressi hujusmodi Characteres, qui non alite Ed. Lug. ex stellarum ordinibus conflantur, quam linea Geometrica, & Litera Vulgares, ex punctu; Superficies, ex lineis; & corpus, ex superficiebus: at length concluding, that who so is able to read these Characters, shall know not only what ever is to come, but also all the Fol. 62. Secrets of Philosophy. Quibus hujulmodi lingua, & Scriptura Arcana, Characterumque abditorum cognitio à Deo concessa est; his etiam datum erit, veras rerum naturas, mutationes, alerationes, & proprietates siderum, omnesa, alias operationes & executiones, osulus quasi illuminatis legere, & legendo intelligere.

fpoken of these Celestiall Characters, Pofell is the only man, who seemeth to have had the greatest knowledg in them; as may appear, out of the greatest part of his Books; among which, that which he hath written upon the Fethsira, gives us an Account of

what himselfe had had experience of. dixero, me in Cælo vidisse, in ipsis Linguæ Sancte Characteribus, ab E[ra primum publice expositis, ea omnia que sunt in rerum natura constituta; ut vidi, non explicité, sed implicité; vix allus mihi crediderit : tamen teltus Deus , & Christus ejus, quia non mentior. Now that which makes me believe, that this Learned Man had some ground of this his Conident Assurance of having such Knowledge in thele Curiolities, is, that beside the Experience which possibly he might have had, he had often also travailed into the Eastern Parts; where he had no doubt seen the Books of the Arabians, which are all full of this kind of Secret Learning. And Fohn Leo, in his History of Africk, affirmeth, that, in Maruco, there is nothing more Common: and the first book which he makes mention of, is a book written by Elboni, an Arabian, the Title whereof is ELLYMANEMORAMITH: which book scarcely treateth of any thing else; and it teacheth particularly, how to describe all the Constellations in Arabick Letters, and to picture them. Elegantly within little Tables; such as the Arabian Hermites doe alwaies carry about them, and have them ready for their Use, in applying them to the Rules of their Zairagia, or Divination. And this confirms that which I shall bring hereIn Icth-

zira.

after, concerning the Mahometans searching after no other Figures in the Heavens, then in their own Characters, reading therein what ever is to happen, in a very strange, and unusuall manner. Whence the fore-mentioned Poltell, upon the same book of the Creation, laith: Decreti itaque sunt demum delineati, suisque figuris adumbrati igne divino in aquis Cali scilicet expresso sancti Characteres, or tanta virtute in Calis express, ut possitetiam veritas suturorum haberi : cujus scientie adhuc vestigium in Marocho, et multis alijs Ismaelitarum civitatibus; licet sint apud eos admodum depravata, & adulterata figura Sancta. I have sometimes thought, that this Author put forth this Book of his, De Configuratione Signorum Calestium, as a Preparative only, to make way for the better entertaining of this Doctrine, among the Europeans. For having shewed, that all the Stars, instead of representing the Images of Living Creatures, do no more but only make up certain Square Figures; it would have been no hard matter afterwards, to have periwaded men, that these Figures were nothing, but Hebrew Letters, the figure whereof comes very neer to that of a Square. For if he should have gone to work otherwise, and thould have endeavoured to have put these Celestiall Letters upon the world, without

any Preparing of mens Minds to receive them, he would doubtlesse have been taken for an Impostor. And he had been formerly sufficiently cried down; so that he needed not to have exposed himself anew, to the Calumny of every black Tongue, by broaching new Propositions; which he could never think would down with them, unlesse he had first prepared their Palates to rellish them. After the world had once been satisfied in the Probability of this his Doctrine, he then intended to make a Full Discovery of all these Secrets, in his Commentaries upon the Zohar: wherein he had layed together such Variety of Curious Learning, as himself witnesseth in divers places of his Printed Books, as that it was not without reason that he so earnestly commended This most Excellent Piece to the World, in his Last Will and Testament, written with his own hand. But fince I have here made mention both of Hebrew, and of Arabick Letters; it may very well be doubted, which of the two, this Celestiall Writing is expressed in; and, which of these Languages these Letters make up. This Doubt therefore I think fit to decide, before I goe any further.

The Ismaelites, or Arabians, who have never wanted Men, that have been very well skilled

Phæn.

Char.

skilled in all manner of Choise Learning. (though they have fallen sometimes upon Ridiculous Studies also:) being moved with a vaine-glorious desire of concealing this Truth; namely that Their Language depended upon the Hebrew; have not only altered their Characters, which were before very like to the Hebrew; but have also adulterated their Names: and, the better to cover their knavery, have also added certain Letters! which the Hebrew Alphabetnever knew: as, their Ssim, Dsal, Thsda, or Tsa, &c. Insomuch that a certain Learned man, that was very well skilled in their Language, faies: Postel de Arabes, versutissimum hominum genus, & plane Ismaeliticum, id est, adulterinum, postquam cognoverunt, suas Literas ortum ducere ab Hebraicis; satagerunt non tantum absolute dissimiles forma reddere, sed ordinem etiam perturbare, & nominum bonam partem mutare They have had the Confidence studuerunt. also to affirme, that Their Letters are the First that ever were; and, that if there be any Mysteries to be found, either in the Signification, or Figure of Characters; we are to look for them no where elfe, but in Their Language. For which cause, interpreting their Alphabet, they deduce, from the first Letter, which is A LIPH, this Verb Conjungere: from the second Letter, which

is BA, this word, Inire: from TA, the Third Letter, Producere: and so of the rest: making up a Prayer out of it, which they say, no other Alphabet is able to shew. So that it is no marvel, that they are able to produce so many severall meanings of words, after this Rate of Interpretation; seeing that, as Kirstenius saith; Integra Volumina de solis Nominibus literarum Alphabeti. Arabici conficiqueunt: sed longe adhuc plura de ordine, figura alijsque accidentibus conscribi possent. These Niceties have made the Arabians so superstitious in the Pronunciation of their Letters, as that when they meete with many words united together by the meanes of an *Aliph*, they will pronounce them all in a Breath, though there should be an hundred of them, and though they should be in danger of expiring in the Act. Those that are Curious after satisfaction herein, may have recourse to the Arabicke Grammer, Printed at Rome. Now, as all Superstition is attended on, by a certaine Foolish Credulity; lo are their men certainely persivaded, that the Heavens being figured with Their Letters, (and not with the Hebrew,) do forehew all things to come. And this is the reaon, that, besides the Division of their Letters into Gutturalls, or, such as are pronounded in the Throat; into Vuales; as the Lat.

tines call them, that are founded in the furthest part of the Roofe of the Mouth; as others are by the Palate; by the Gummes; by the Lips; by the Teeth, and the Tongue together: and also into some, that are pronounced with a kind of Sibilation; others, with a certain Stammering; and some, with a gentleturning of the Tongue, which They call, Dsalgijetun; and the Latines, Flexa: into others agen, that are Short, Long, Radicall, or Trancall, and Servile: I fay, that besides all these Divisions, they doe yet divide them againe, (the better to accommodate them to this Celestiall Writing) into Schemsijun, and Kumrijum, that is to say, into Solar, and Lunar, which are particularly knowne, by those that observe the Rules of the Zairagia, it being unlawfull for them to devise them. And perhaps it is in Observation to this Do-Etrine, that the Mahometans doe never begin to write the first part of a word, at the end of a Line; and the rest of it at the beginning of the next Line; as the Greekes, and Latines ule to doc: but if the space be not sufficient to hold the whole word, they draw a stroake from the last Letter of the Last word, to the Now we affirme, that end of the Line. though these Letters are very much altered, and corrupted; yet may it notwithstanding very easily be discovered, by the Figure of a grea

a great number of them! that they have beene taken from the Hebrew and even Children may be able to judge of the Truth hereof, by comparing but the Arabicke Hha, with the Hebrew He; the Cha, with the Cheth; the Ra, with the Reselvi, the Zain, with the Zain: the Sin, with the Schin; the Tha, with the Tub, the Ain, with the Aghin; the Pha, with the Pe; the Caph, with the Caph; the Lam, with the Lamed; the Vau, with the Vau, &c. So that consequently, if wee are to learch after any Mysteries in these Letters, it ought to be, not in a corrupt Copy, but rather in the Originall. The same is to be faid of the Samaritane Characters also, which are corrupted from the Hebrew : and this is so certaine a Truth, as that it is a Point of Infinite Perversenesse to offer to doubt of it: as I have proved else-where against Scali-

7. The Reasons brought by the Ethiepians, or Egyptians, in the behalf of Their Letters, is not so easily answered, as those of the Arabians, and Samaritans: for as much as, their Letters being only Hieroglyphicks, expressing the figure of an Oxe, of a Horse, of a Lion, of a Beare, of an Eagle, and in a manner of all other Living Creatures; they doe (say They) represent in the Heavens, whatsoever is to come to passe in this world.

D d 2

And

And therefore, if there be any thing to be read there above, by meanes of the Stars; we must reade it in these Hieroglyphicks, and in this Language, and not in any other-fincethat in Ancient times in Itead of Letters, they made we of the figures of Living Creatures. To this it is answered, as we have formerly faid, that these Living Creatures have beene represented in the Heavens, only by reason of a certaine Correspondency, that the Stars of which these Constellations consist, are ebserved to have, with these Living Creatures upon the Earth: and what other Reasons of H loever are given, they are Vaine, and Foolish. Such as are those, alleadged by theaforenamed Lazaro Banelli; who accommodates the Properties of these Celestiall Anmalls, to leverall Kingdomes, over which they rule: as, for Example, the Conitellauon of Aries tules over France, Germany, Syria, Palestina minor, Sucvia, and the Upper Silesia. That of Taurus governs Persia, the Isles of the Archipelago, Cyprus, the Maritime parts of Afia Minor, Polonia major, Rusia alba, Switzerland, the Countrey of the Rhetres, Franconia, Ireland, Lorraine, and part of Swethland. But, to leave this Italian to please himselfe with these Trisles, and like-Wile Albertus de Marchesijs de Cottignola, 1 Franciscan Fryer, who moralizeth this Astro-

logy after a way of his owne; we affirme, that all these Celestiall Living Creatures fignifie no more then what we have faid before; and doe therefore by the fame reason conclude, according to the judgement of the Rubbins, that we mult not learen-after any Mysteries, nor any other Characters, made up by the diverse disposition of the Stars, but only in the Hebrew; and confequently, no Signification in any other Language, but in the Holy Language it being most proper; that That Language, which was the First in the whole World, and which was spoken by God himfelte, should give us notice Above; what things are hereafter to come to passe; leeing he hath informed us here Below, namely in the Holy Scriptures, of all Things that are past, And this Conclusion is a most true one, say the same Rabbins, for as much as in a cleare, bright Night, a man may see in the Heavens all the Hebrew Characters perfectly figured: which one cannot doe of those severall Living Creatures, that are placed there; leeing that the Imagination cannot be any whit fatisfied, when, for example, in the Stars that make up the Constellation of Aries, there are Five Other to be seene close about it, which by realon that they are not comprised within the Figure of this Beast, doe disturb the Fancy, and hinder it from making up the Figure it $\mathbf{D} d \mathbf{g}$ gciit**c**s*

Caliloq.

desires. The same also may be said of Tautus: for there are Eleven Starres to be seene there which are Effentially of this Constellation; and yet are not brought in, in the Pi. Aure of it. So likewise in the Constellation of Gemini there are Eleven Stars belonging to it, which are distinguished from those Nineteen, that represent the Figure of this Signe as Cancer also hath Foure bright Stars, which lie Loose from those Nine, which make up the Image of this Living Creature. But as for the Hebrew Letters, there is nothing to hinder us, from finding them distinctly described : and it any one doe chance to find either Arabicke, or Samaritane Letters there; thisis still but to returne backe to the Originall, from whence they were taken.

8. First then we are to take notice, that the Starres which make up these Letters, are not disposed into the order they appeare in, at all adventures, nor in any confused way, as they seeme to us to be; but are placed thus, with some Designe, and in a Divine Order; God having made all things in full Persection. Those that understand not the Play of Chiss, seeing the Pieces stand here and there, so consused by, will be apt to thinke, no doubt, that they stand in that consused manner by meet hap hazard, seeing that in some places there are a great many; and in some places there are a great many; and in some places there

and one fide of the Chesse-board is full, and theother side quite bare; and in a third place perhaps you shall have but two, or three: In a word, this Difference in the placing of the Pieces is fo great, as that hee will certainely conclude, that the whole Businesse is clearely without any Designe at all: notwithstanding that they are all ranked in very exact Order ; and that there is not the least Piece there, but is of use, and doth its proper Office. the fame manner is it with the Stars, which we fee in the Heavens: for thoughin some places you see many together, & in others but a few, and that the Order they stand in, lookes confuledly, and in a manner ridiculous, yet neverthelesse is it most Admirable, in it selfe, and proceeds from fome most wonderfull **De**signe; which Those Men perfectly understand, who by their Holy Life, are elevated above all that is here below. Thus it is storied of S. Anthony, that he perfectly understood this Heavenly Writing.

Secondly, that although the Stars which are in the Eighth Heaven, (if at least there be any such thing as an Eighth Heaven,) be Fixed; yet do they not therefore alwayes compose the same Letters; at least, the greatest part of them; but they have their Changes, according to the Diverse Aspects of the Planets. Thus those Starres, that, ten yeares since, made

up, for Example, a Teth, shall now perhaps make a Mem, or a Lamed. Which is the reason, say the Rabbins, that This Writing serves not, but for the shewing of things to come.

In the Third place they fay, that we are most especially to observe what New Starres soever shall appeare; because that These doe fore-shew the greatest Mutations: God making use of these, in making up, by meanes of their Aspects, and Conjunctions, New Letters; whereby he either expresseth untous his Wrath, or his Mercy: as having determined with himselfe, to chastise us, if we continue in our fins; and to pardon us, if werepent of them. Thus, before almost all the greatest Mutations, that have happened in the World, have some of these New Stars been observed to appeare; and they have been such Stars too, as have been really found to be in the very Heavens. Such, as was That, observed by Hipparchus, 125. yeares before the time of our Redemption; which Star prefaged the end of the Grecian Monarchy approaching. Another the like appeared also in Claudean's time, in the yeare of our Saviour Christ 388. Another, in the time of Messahatah, Haly, and AlhumaZar, Arabian Astrologers; which appeared in the 15. Degree of Scorpio, and cast forth as great a Light, as

the Fourth part of the Moone could doe. Another, in the time of the Emperour Adrian; and another also under the Emperour Otho; which appeared betwixt the two Constellations of Cepheus, and Cassiopeia. Another in the year 1264. not far from Cassiopeia, tending towards the North: and Another likewife that appeared afterwards, on the Chaire of the same Constellation, about the beginning of December, Anno 1572. and continued for the space of fixe Moneths. Another, that appeared Anno 1596. In the Constellation of the Whale: another, of the Third Magnitude, observed in the necke of the Swan, Anno 1600. and another, that was feen, two yeares after, in Pisces. Another, that appeared two yeares after That, in the Constellation called Serpentarius, An. 1604. and was called by the name of the faid Constellation. There are some others besides, which Licetus De Nov. hath collected together, out of Homer, Var- Aftr. 6 70, S. Augustine, Pliny, AlbumaZar, Phe- 2 cap. 6. recides, Athenaus, Eustathius, Germanicus, ad 23. Cyprianus Leovitius, Cardan, Paulus Haja-Lelius, Galilaus, Thomas Fienus, Cuspinianus, Tycho Brahe, Gul. Fansonius, who was his Scholler, Fo. Kepler, Alphetragius, David Chytraus, Fabricius, Hieronymus Munosius, Wencestaus Pantaleo, Beyerus, Pyrgius, Michael Coignetus, Cornelius Frangipanus,

Either

gipanus, &c. some of which Authors have particularly observed the truth of this Do-Arine which I have here delivered; name. ly that all These New Starres have beene the Fore-runners of the Greatest Mutations that have happened: and that in default of These, Comets have appeared; which, though they are easily distinguished from True Stars, and have their place of Being in the Aire onely; yet have they served to represent, by their diverse Aspects (according to the Doctrine of the Rabbines,) Other Letters, and to foreshew the Difasters that have happened: it being very necessary (say They,) to have a speciall regard to these New Lights; which are, as a new Letter, which being added to a Word, alters the sense of it. As, for Example, in this Word AKE, if one adde an L, it will be no longer AKE, but LAKE. Or if in the middest of this word AKE, one infort an R, it will alter the word, and make it ARKE. So that wee see, one onely Letter, as an L, or an K, utterly changeth the whole Sense, In the same manner is it with the Stars; where a New Starre added, varieth both the Writing, and the Sense.

19. In the Fourth place, that we may be able perfectly to understand this Celestiall Writing, we must exactly observe the Verticall Stars: for, those which are over a Kingdome, faith Abiudan, doe ordinarily thew, what ever is like to befall it. And in this Sense, it will not be any hard matter to apprehend the meaning of Cardan when he saies, speaking of the Star in the Tail of Urla Major, that it hath fore-shewed the Changes of all the Great Empires; understanding this to be the Sense of this Truth, delivered by Cardan; that, according to the Doctrine here laid down, this Star, though not Alone, and by it felf, yet joyned with others, hath shewed these Changes; making up, by their Conjunction such Entire words. as did fore-shew the Fall, or Rise of these Empires, either clearly, and plainly; or else perhaps, more secretly, and Mystically, as we shall shew hereafter. Now, as in all forts of Writing, there is One certain Letter, both in Nounes and Verbs, which is more Frequent then any other, and hath the Preeminence throughout all the severall Gonjugations, and Declenfions; in like manner in this Celestiall Writing, it hath been observed, that in all the Mutations of Empires, This Star, in the Taile of the aforesaid Constellation, hath been more Eminently noted, then any other:

Either because it is more Frequent, in the Discourse of Monarchies, then any others Or else, that it is as the Capitall Letter, in the most Significative Words; as we see there is in all Proper Names, of almost all the Languages in the World ? as for example, in the name of Peter, the first Letter is greater, then any of the rest that follow. And thus may we answer this Question, which fome may happily make; namely, Why, in this Celestiall Writing, there are both Little, and Great Stars also? If it be further de manded, Why, in this kind of Writing, there are, in one and the same word, Great, and Small Letters, or Stars, mingled together? it may be answered, that the Reason is, to make us take more Notice of those Letters in the Word, which are the Most Significative; which is a Course, that the Anagrammatists are very well acquainted withall. As, for Example, if in the word Soveraignty, I would have VERITY, to be especially observed, I will write the word Soveraignty, in this manner, foVERaIgnTY: where the Letters of the Word VERITY, are greater, then any of the rest. Or if in the Word, Representative, I would have, Present, to be Chiefly taken notice of, I would then write the Whole Word thus; rePRESENTative. We are not then to wonder, if in the Heavens

Heavens, we often see two, or three Great Stars to goe to the Composition of a Word. wherein there are Small Stars also: and this is that, which we are to have most particular regard unto, (as we have already shewed, When they are Verticall to any Place. And by this meanes may we be able to give a Reason of that, which hath been hitherto Unknown: as, when the Astrologers affirm, that when Caput Algol, or Medula's Head. was Verticall to Greece; the Stars did foreshew the Calamities, which afterwards happened unto it, by the Tyranny of the Mahometans; without giving us any Reason Why: no more then they doe of their Confidence, in affuring us, that the same Constellation, which will in a short time be Verticall to Italy also, fore-shewes a strange Desolation, that is to fall upon this Pleasant, and Fertile Country. Now all these Disafters, though, according as they are foretold, so doe they Certainly come to passe; yet neverthelesse is the Fore-seeing of them grounded meerely upon Experience; neither can the Authors of these Predictions, for the Most part, give any other Reaion of them. But now, according to this Doctrine of the Celestiall Writing, we know, that these Mutations shall happen on the Earth, because we see, they are written in the Heavens.

And this is the Reason that R. Chomer affirmes, that the aforesaid Medusa's Head, or the Stars that Compose it did fore tell the Lamentable Desolation of Greece. because that Five of the Principall Vertical Stars did for a good while together, makeup this word, Charab. Which, in the Second Conjugation, signifies, To be Desolate: understanding This, particularly of Greece, over which these Stars shone, because that the number of its Letters, which are, Fod, Vau, Nun, and which being put together, make up no Favan, that is to lay, Greete, do yield the same number, that Charab doth: as you may here fee.

Charab,

Charab,

Charab,

Destroied, Desolate.

Summ. 12.

According to these Principles, any man may foresee, by the putting together the Stars of the same Constellation, the Disasters that Italy is threatned with. However it be, Juntin, an Italian Priest, and a very excellent Astrologer, is bold to utter these words:

Illud verò (saith He, speaking of this Medu-Insphan:

Ja's Head,) Toleto nunc, Apulia, & Nea-tolesa.

politanorum regno est verticale; moxque Italiam invadet: quibus suam quoque cladem allaturum

laturum effc, maximopere est verendum. Now how long before hand, these Celestiall Letters do foreshew the Changes that are to happen; no one Author, that I know of, hath precisely determined: they only fay, that, Before they are Verticall, they do foreshew this Change, and whatsoever is to happen: God being willing thus to prepare us for the Evils which are to befall us. after that they are precisely Verticall, if our Repentance hath yet found any place in his Mercies; He then causeth some New Star to appear, and, by its Intervening, to shew (as we have formerly faid) a quite Contrary Thing, to what was before fignified.

10. In the Fifth Place, the fore-named Authors affirm, that to be able perfectly to understand this Celestiall Writing, we must know how to distinguish exactly, which Stars are Orientall, and which Occidentall, Meridionall, and Septentrionall: forasmuch as these Quarters of the Heaven are very Essentiall in this Reading. For, if any one desire to know, say They, the Good Fortune, and Prosperitie of a Kingdome, or of any Other thing: he must then read those Letters which are Verticall to him, (or which want not much of being so,) from the West, toward the East. And if he would be informed of the Evill Accidents, and Misfortunes that

that shall befall a place; he must then begin to read, from the North, towards the West. Now, why the Good Fortunes of a Place should be read, from the West, toward the East, rather then from the East, toward the South: and why the Ill Fortune is likewise to be read, from the North, toward the West; I have not found any Reason given, However, I shall advenby any Author. ture to give this Conjecture at it: namely; that feeing that Nature, being at Liberty, and not hindered by any thing, alwaies tendthto the Best: and that, as Aristotle saith, It would alwaies bring forth. Males, as being more Perfect Creatures then Females are if it were not hindered by some Repugnant Caule: it is most proper, that Good Things, and all Perfections, should be read from the West toward the East, seeing that This is the Free, and Naturall Motion of the Stars, the other, from the East to the West, being a Contrary, and Forced Motion. As for Ill, Fortune, and Disasters, they might according to this Principle, have been read from the East toward the West, had not the Ofacle which cannot lye, uttered this Won-, derfull Truth: A Septentrione pandetur ma-vier, 114. um: All Evill commeth from the North? But, why from the North, rather then from any other part of the World? The Reason

of this is not so easily given: yet I conceive, it would stand with found Philosophy, to answer; that, by reason of the Darknesse, and Gloominesse of the Aire of those Parts; caused by the great distance of the Sun; and also, by reason of the Evill Spirits, which are the Authors of so much Evill, and which inhabite Darke Places; a man may very Reasonably fay; that all Misfortunes come from the North; as being a Place, which is full of these Evill Spirits, or Demons; as Historians testifie.

And from hence, it will be an easie matter to apprehend the Reason, why the Ancients figured in these Northerne Parts of the Heaven, a Serpent, or Dragon, close by the Two Beares: seeing that these Creatures are the True Hieroglyphickes of Tyranny, Violence, and all manner of Oppression. And certainly, who ever shall but runne over the Annals, will finde, that all the Great Desolations that, have ever happened, have come from the Notherne Parts. The Assyrians, or Chaldeans, fee on by Nabuchadonofor, and Salmanafar, have sufficiently manifested the Truth of this, in burning to the ground a City, and a Temple, that was both the most Sumptuous, and the most Holy in the world; and in the Utter Ruine of a People, whom God himselfe had taken into his own Speciall

Speciall Protection, and whose Father he particularly called Himselse. And hath not sub Ho-Rome, like a Second Ferusalem, in like man-Martiano ner often felt the Fury, of this Accursed Ge- & Justin neration of the North; when, by the Cru-mano, an. elty of Alaricus, Gensericus, Totilas, and the 456.6 rest of the Gothick, Hunne, Vandale, and A- 551. lane Princes, It saw its Altars overturned, Its Stately Palaces burnt to Ashes, and Its Inhabitants confumed by Fire, and Sword! Thus hath not This Nation spared at all, the Two Spouses of the Living God; and doth still torment the Later of these, by the Tyranny of the Turkes, which also came out of the North. Most Properly therefore doe we, in this Celestiall Writing, beginne to read Disasters, and Missortunes, from the Northeme Part; seeing that A septentrione pandetur omne malum. Or Else we may say, that we beginne to read on this fide, because that the Verbennen Tipatach, which, in this Prophesie, is translated, Pandetur, signifieth also in the Originall, Depingetur: 10 that we may render this Prophesie in these words: All Evils shall be described, (or, written) from the Northward. And if written, then certainly to be read from This Side.

Now this Celestiall Writing doth not alwayes represent in Words at length, what things are to happen; but sometimes in a

more Ec 2

uid The-

Grami-

odor.

more compendious manner, and by way of Abbreviation: in like manner as was that Vision, which appeared to Bellhazzar, foreshewing the Destruction of his Kingdome, Accorand which was interpreted by Daniel: M A-THECEL, the He- NE, PHARES And as none but Daniel, who was a Just Man MENE, in the Sight of God, could interpret this Vi-CHEL, fion: in like manner, fay the Jewes, it appertaineth onely to Good Men, and not to SIM. all manner of Persons whatever, to interpret those things, that are found Written in the Heavens; which are, for the most part, very Obscure, and Difficult; and which require, for the Perfect Interpretation of them, that a man should be skilfull in the GEMA-TRIE, NOTARICON, and the TEMURAH; which are the Three Parts of the Cabale. The First of which, (the name Gra. 49. whereof משריא Gematria, is corrupted from the Greeke Tewpersia, or elle this Later from the other;) considereth of the Numbers that are contained in the Letters; and, by comparing them with others the like, gives an Explication of what was before Obscure. As tor Example, where it is faid in Genefis, concerning the Comming of the Messias, יבא שולה Fava Schilo, Shiloh shall come; these Hebrew Letter's make up the number 358, which is the Number also of the Letters of the Messias מטיח

משוח Malchich: so that the Propher saving. Dones venerit Schiloh; it is as much, as if he had laid; Donec venerit Messias. The Second Part is of use, when the severall Letters of a Word doe represent, each of them, a whole Word: as, in this Devise of the Romans; S. P. Q. R. Senatus Populusa. Romanus: and in this Hebrew Name, Adam; the First Letter whereof significth TEN Epher, Dust; the Second, ____, Blood; and the Third, arab, Bitterness: Intimating, that Man is nothing but Bitternesse, and Sorrow; but Corrupt Blood, and Sin; and, lastly, but Dust, and Ashes. The Third and Last Part, (the name whereof, Notaricon, is taken likewise from the Latine, Notarius, or esse this Latine word, from the Hebrew 1711 Natar, which fignifies, to Transferre, or Transpole : aword very proper to the Art of Anagrammatisme;) is, when either Two, or more words are united together; or are read backwards, or otherwise, after the manner of Anagrammes; or else, are divided into severall other words, by the Transposition of the Letters: As, for example, where God faith to the Children of Ifrael יקר מלאכי לפניך: Felec Malachi lepanecha, My Angell shall goe before you: where, it is demanded, what Angell this was ? and it is answered, that it was Michael: because that the Letters of the word מלאם Malachi, Transposed, make up that Name. Name. You may see many Examples of this Nature in my Advis sur les Langues, &c. and in my Apology for the Cabale, the Title of which Treatise, is, Abdita Divina Cabale Mysteria, contra Saphistarum Logoma-

chiam, defensa.

these Rules laid down, some certain Secrets of this Celestiall Writing, which are delivered by R. Kapol, Chomer, and Abiudan; which are the Three, that have written the most, of this Subject, of any. We have formerly shewed, how the Stars of the Constellation called, Caput Algol, being Verticall to Greece, did foreshew the Desolation of it. I he like is to be observed in the rest of the Stars, when they are Verticall to any other Kingdome, though they are perhaps ordered, and to be understood otherwise.

Thus, a little before the Temple of Ferulalem was burnt, and utterly confumed by Nabuzaradan, it was observed, that Eleven of the Stars, that were the most Verticall to it, composed, for a pretty while together, these

five Letters,

M & W > M

which being joyned together, made up this Word, (reading it from the North toward

the West,) Hikschich; which signifieth, to Reject, and Forsake, without any Mercie: and the Number of Three of them added togethes amounteth to 423. which is the Space of Time, that this Starely piece of Building had stood. In like manner, a little before the Jewes saw their Scepter cast downe to the ground, and their Liberty carried Captive into Babylon, Five Stars were, for a long time together, observed to compose these Three Mysticall Letters, a word which signifieth, Break, Cast Down, and to And the Number of these Letters, which is 505. was the Exact Number of years that the Fewilh Kingdome had lasted, from Saul, to the Deplorable King Zedechi-Neither are the Fewes the only People, who have been advertised, by this Celestialt Writing, of the Miseries that were to befall them: but all the other Nations of the World might have read in the Heavens in like manner, the Eyils that have happened unto them; as the fore-named Authors affirm.

Thus the *Persians*, or Assyrians, who were the Ruine of the Monarchy of the *Jewes*, saw the Period of their own Empire, after that Foure of their Verticall Stars had com-

E e 4

boled

posed these Three Letters, which make up the Numof 208. which was the time
of the Duration of this Monarchy, which was
founded by Cyrus.

The End of the Grecian Empire was likewife fore-shewed, by Four Stars, which made

up the Verb nifieth, to 79 Parad; which fignifieth, to 79 Divide: and that in This Wonderfull Manner, as that the very same Letters did produce also the Number of years that this Monarchy lasted, which took beginning, at the time that Alexander the Great subdued the last Darius.

That of the Athenians lasted but 490. years; which is the Number of these Three Letters, which Foure Stars, that were Verticall to this Place, did compose;

Angustijs affici. Besides these Foure Stars, saith Chemer, there were Foure other observed also, which made up two >> Caphs; I know not Why though, saith He; unlesse it be, that these Letters are Fatall, and of Sad Omen. I shall adde my Conjecture here,

Names, Cecrops, and Codrus; which are the names

names of those Two Kings, under whom this Powerfull Monarchy had its Rise, and Fall.

The Romane Consulate could not maintain Its Power beyond the Term of 500. years: because that these Bounds were determinately prefixed to it, in this Celestiall Booke, by Eight Verticall Stars, which composed this Word, bare this Sense, & Number: Ca-

The Monarchy of Julius Cæsar, which was built upon the Ruine of the Consulate; as This also was, upon the Ejection of the Kings, was very neer of the same Continuance; and the End of it was in like manner prefixed by Six Sars, which made up these Three Letters, which signifies, the Number whereof is 502.

But, that we may produce something, concerning Things Yet to Come, R. Chomer assures us, that it is now a good while since, that this Celestiall Writing hath pointed out the Declining of Two great Empires of the East. The First is, that of the Turkes, over which there are observed seven Verticall Stars, which being read from the West to the East, (for, it would be a great Blessing, to see the Ruine

418

Ruine of this Empire,) make up this word, Caah; which fignifieth, to be Battered, Feeble, Languishing, and Drawing to an End. But

now, feeing itmay be doubted at what time this which in Empire shall be reduced to this Extremity, humbers, the fame Lerrors doe clearely resolve this i. stand Doubt. For, the Middle Letter, which is for 1000. Aleph, being made up of Brighter, and more Sparkling Stars, then the Others are, sheweth, faith Chamer, that Its Number is the also doe, Greator, so that, in This place it standeth as may be for 1000. and the First letter signifieth, 20. and the Last, 52 So that, when this Kingobserved out of dome shall have accomplished the number of 1-lebrew Grammars.

1025. years, it shall then be overthrowne, and brought to Ruine. Now, if we reckon from the year of our Lord 630. which was the year, (according to our Vulgar Compution,) wherein the Foundation of this Empire was laid; we shall find, that it is to last till the year of our Lord 1655. for the compleating of the aforesaid number 1025.

so that, reckoning from this present yeare, 1650. this Kingdome is to last but Five

clining is pointed out by the Stars, according to K. Chomer, is that of China: but this Rabbin delivers hunself in such an Obscure

ma nner,

years longer. The Other Eastern Kingdome, whose De-

manner, in discoursing of this last piece of Celeftiall Writing; as that, till I understand it hetter . I shall torbeare to set it downe. Hee produceth also diverse Others, which doe define the Particular Durations of most of the Kingdomes of Europe: all which I may happily communicate to the World hereafter, when I have first seene, how these Guriosities are received.

12. Now, that I may freely deliver my owne Judgment concerning this Celestiall Writing, I must take Liberty to propose some few Objections, which, I have found, may be brought against it.

The First is, that if so be, by this Writing, all the Great Mutations in the World may be known; it is possible then, that the End of the World may in like manner be found out by It; as being the Greatest, and most Important of all the rest: so that Men may, by a naturall Meanes, attain to the knowledge of This Great Secret: which is Contrary to the Holy Scriptures.

The Second is, that Astrologers have been able to foretel many of these Mutations, which have afterwards come to passe accordingly; and yet have never had any knowledge of This strange Kind of Writing: It is therefore Uselelle, and Imaginary.

The Third is, that the Polition of the Stars

is not so Essentiall to the Letter, which it is brought to make up; but that the same Star may as well make, for Example, a Reset, as a Daleth; and so of all the rest: and Consequently, Severall Men, forming several Characters of the same Starres, may draw from them Contrary senses, the one to the other.

But to all these Objections, I answer briefly thus. To the First, I say, that it is not Necessary, that this Celestiall Writing should foreshew the end of the World; because that God may have reserved this Secret to Himselfe: Or Mab. else, that It will Really foretel This hereafter, when those Other Signes, set downe by the E-wangelists, shall shew it also: it being all one to

fay, that the Starres shall fore-shew it by some certaine Writing; as to say, that the Sun, and the Moone shall foretell it, by their being Dark-

ned.

Apb.

To the Second, I answer; that the Foure Grand Causes, which (according to the Opinion of Astrologers) produce the greatest Mutations; the First whereof is, the Changing of the Apogaum, and Perigaum of the Planets: the Second, the Changing of the Excentricity of the Sun, of Venus, of Mercury, of Saturne, of Jupiter, and of Mars: the Third, the diverse Figure of the Obliquity of the Zodiacke; and the Fourth, the Conjunction, (cheisty the Great one) of the Superiour Planets: Isay,

that all these Foure Causes may, for the most pan, be comprized within this Celestiall Wriing: that is to fay, that it hath happened very often, that at what time this Celestiall Writing lidpoint out some great Change, there was at the same time also a Conjunction of the Supenour Planets; or elfe, some one of the Three other forenamed Causes. So that They, not understanding any thing of this Celestial Wriing, imputed those changes which they observidto come to passe, to those Foure Reasons only. But that it may clearly appeare unto us, that These have not been the True Causes of all these Changes; we need but have recourse to the Chronologies, and Particular Annals of each severall Kingdome, and compare them with the Astrologicall Observations; and wee shall finde, that the greatest part of all the Grand Mutations have happened, without any Conjunction of the Greater Planets, or any of the other Causes before specified. So that we must necessarily flye to some other more Certain Means, by which we may be able to foreknow, by the Aspects, and Motions of the Stars, all these Events. Now this Means can beno Other, as it seemeth, but this Celestialt Writing.

To the Third Objection, which seemeth to have the most Weight in it, it may be answered, that it is true indeed, that a Man may make

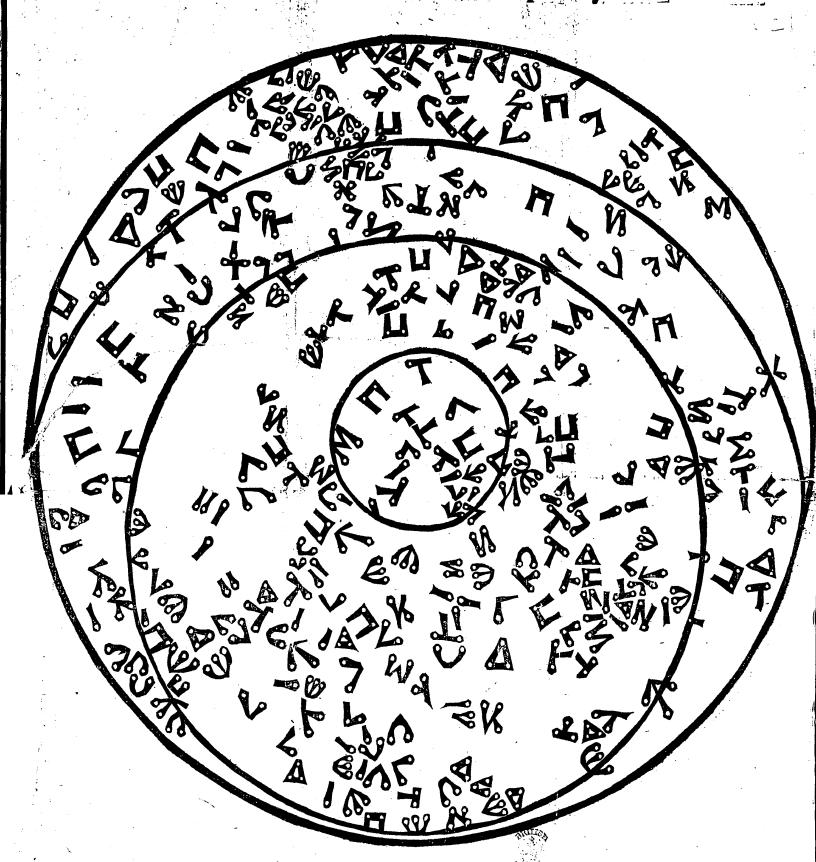

a Resch

a Resch of the same Star, that another man perhaps will make a Daleth of: but in This, as in many other things, wee are to follow the Tradition of the Ancients, and to rest satisfied with what They have delivered unto us. Otherwise, there will not be any Certainty at all, in any One of the rest of the Sciences; especially in Aftrology: which requireth, that those Stars which compose, for Example, the Constellation of Aries, or the Ramme, should be described rather in the Figure of this Beast, then in that of an Oxe, or a Horse; and so in all the So that who ever should represent the Figure of a Bull, among the Stars that belong to the Ramme, and the Figure of a Ramme, among those of the Bull; he would destroy the very Principles of Astrology: notwithstanding that the Stars of Taurus would as well bear the Figure of a Ramme, as of a Bull. In like manner, he that should make a Refeh of such a Star, as he should have made a Daleth of; notwithstanding that the Star would beare it, yet would he overthrow the Principles of this Celestiall Writing.

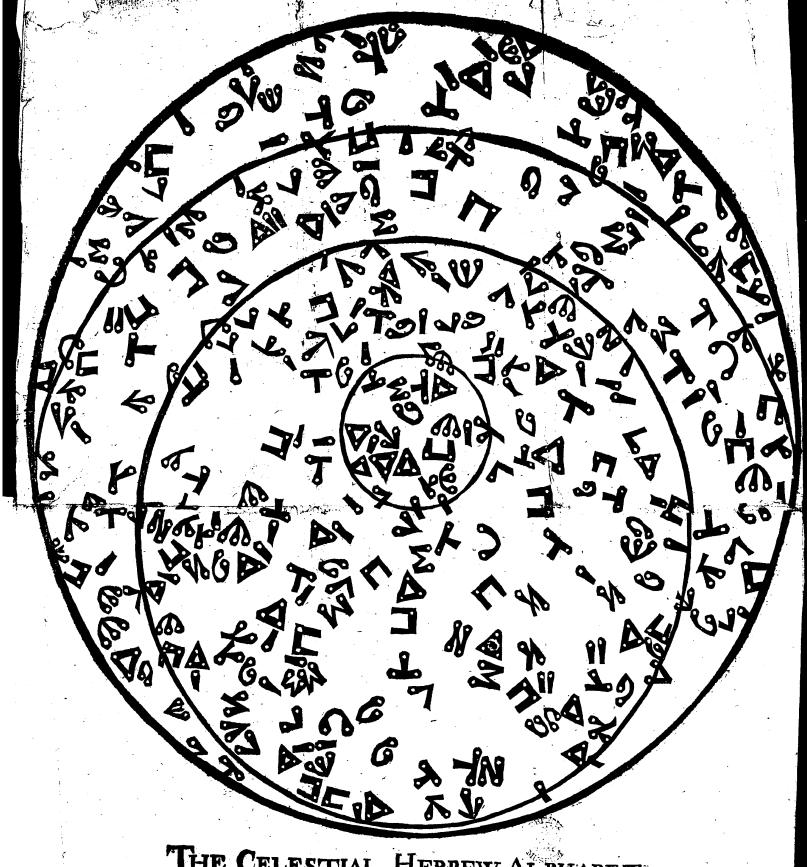

If it be now demanded; who it is, that is to judge of the vast number of New Letters that are made daily, by the Diverse Aspects of the Planets: I answer; that it appearaineth to those Men, who are Piously, and Religiously versed in this Heavenly Writing; and, not to all

kind of Persons indifferently. But I shall as yet suspend my own Judgment, as welin This; as in all the rest of these Curiosities, which I have here delivered; till such time as I shall have found either Weaker, or Stronger Reasons.

THE EXD.

The Characters of these two Tables are something different from those, which Bonavent ure Hepburn, a Scot, hath cut in Wood; and from those other also, which Duret hath set down, in his History of Languages. For I have made choice to follow those, delivered by R. Chomer, a man more skilin this Particular, then either of the former: asbeing one of the most Learned amongst the Fewes, of our times. And yet, I confesse, some of the naracters are not right, through the Gravers sault: yet the difference is so little, as that it cannot be of any great consequence, or importance. The two ables are divided by the Equator; and the Stars are ranged here, in the same order, that they are in the Globe: only those Stars, which are under the species of any of the Planets, cannot be supposed to make up the same Letters now, which you here find represented, and which they made before; beause that these Planets, which by reason of their Wanderings, cannot be here set down, do daily, by their various Motions, create New, and Different
